OPENS THURSDAY, FEB. 19

State Electricity Commission of Victoria

POWER LOAN

4¾%

for optional term of 7 or 12 years.

An amount of £2,250,000 is sought for capital works now being constructed to increase power and fuel resources. Since these works are essential for national development, subscription of funds on the attractive terms offered merits the earnest consideration of large and small investors.

HIGHER INTEREST.

Investors will obtain the benefit of interest at t higher rate of £4/15/- per cent. Interest will be immediately funds are lodged and will be paid ha yearly on 1st February and 1st August during t term selected.

GILT-EDGED SECURITY.

The loan will rank among the highest class Australian gilt-edged investments. The princi and interest are secured upon the revenues of t Commission and guaranteed by the Government Victoria.

PRICE AND TERM.

The price of issue is par, and the term is eith 7 or 12 years at the option of the investor at t time of application. Any amount in multiples of £ may be subscribed. Inscribed stock or debentur as preferred, will be issued and will be inte changeable at will of the holder.

INSTALMENT PAYMENTS.

Subscriptions will be accepted in full or by a d posit of one-tenth on application and the balance 30th April, 1953, either in one amount or thr equal instalments.

FREE OF EXCHANGE.

Lodgement of subscriptions and payment of inte est will be free of exchange throughout Australi Repayment of principal will be free of exchan throughout Victoria and in the capital cities of States.

TRUSTEE INVESTMENTS.

The loan is an authorised investment for all tru tee funds in Victoria, Queensland and Tasmania.

STATUS OF COMMISSION.

The Commission is Australia's largest electrici supply authority. Its investment in plant a equipment now stands at £124,000,000. Its reven for this financial year will approximate £20,000,00 This loan for capital works is raised under its ow borrowing powers.

Prospectus and Applications

The full prospectus can be obtained from and applications may be lodged with any office in Australia of The National Bank of Australasia Ltd. (including The Queensland National Bank Ltd.) or the Commonwealth Bank of Australia; members of recognised Stock Exchanges; or any of the Commission's offices. The loan will close not later than Tuesday, 10th March, 1953.

The STOCK EXCHANGE

OFFICIAL RECORD

Vol. 46 JANUARY, 1953 No. 1

(Issued at Melbourne, February 6, 1953.)

Odd Lots Specialist

The Stock Exchange of Melbourne recently appointed one of its Members to the position of "Official Odd Lots Specialist."

The appointment is the first made by an Australian Stock Exchange, but follows a practice adopted by large overseas Exchanges.

In June, 1951, the Exchange created an Odd Lots Department (see page 918 Nov., 1951, "Official Record") which proved very successful in matching orders in "odds" lodged by brokers on behalf of their clients. However, as a sale could only be booked in stocks in which both buying and selling orders existed, many orders remained unfulfilled for considerable periods.

The new procedure will provide facilities whereby the orders of investors to buy and sell odd lots may be executed as rapidly as if the transaction were in a full marketable parcel.

Important provisions relating to transactions with the Specialist are as follows:—

(a) An "odd lot" of securities is any quantity less than a marketable parcel, i.e., a normal unit of trading in the full market. The size of a marketable parcel is governed by price —at 50/- or under, it is 100 shares, and from 50/- to 100/- it is 50 shares.

(b) Orders are not acceptable with price limits, the price of the sale being based upon the next full market price after lodgment of the order.

(c) The Specialist will buy or sell all odd lots, including half marketable parcels, offered on margins (specified hereunder) below or above the next sale price of a full marketable parcel at an Official Call. Should sales occur at different prices at such Official Call, the average price shall be taken as the full marketable parcel.

Should no relevant sale occur at an Official Call after an order has been lodged, the Specialist may buy or sell the odd lot in question at a price mutually arranged.

Odd Lots margins are as follows:—

Full Market Price	Odd Lots Margin Shares or Stock Units	Rights
Up to 6d. inclusive	1d.	1d.
Over 6d. up to 5/- inclusive	3d.	3d.
„ 5/- „ „ 15/- „	6d.	3d.
„ 15/- „ „ 30/- „	9d.	3d.
„ 30/- „ „ 50/- „	1/-	4d.
„ 50/- „ „ 100/- „	1/6	6d.
Over 100/- by arrangement.		

(d) The Specialist will accept orders in securities listed on this Exchange, irrespective of the Register on which they are held provided that where possible transmission forms signed by the transferor are delivered with the relevant documents.

Recent Loan Issues

GAS & FUEL CORPORATION OF VICTORIA.—Applications close on February 17 for Cash Loan Series "A" of £1,250,000 at £4/15/- per cent., repayable April 1, 1960 or 1965, at the subscriber's option. The Loan, a trustee investment in Vic., Q'land and Tas., has been underwritten.

Company Half-yearly Reports

A.R.C. INDUSTRIES LTD.—31/12/52: Profits were satisfactory despite a reduction in output.

AUSTIN DISTRIBUTORS LTD.—31/12/52: Deliveries in Victoria of 1,571 vehicles were lower than the corresponding period last year. The figures for all other departments were higher for the period. Directors consider the results satisfactory. Public demand is still firm, and there is a delivery delay of up to three months for some models.

AUSTRALIAN WOOL BROKERS AND PRODUCE CO. LTD.—31/12/52: Conditions on the Company's properties are good and wool and stock prices remain at satisfactory levels.

AVIATION MANUFACTURING CO. LTD.—31/12/52: Sales and profits have been maintained at satisfactory level.

CARLYLE & CO. LTD.—31/12/52: Sales tempo increased to December. A new property has been purchased in Main Street, Bunbury, opening February.

COTTMANS LTD.—31/12/52: Profits were satisfactory, having regard to the effect of import restrictions and general trading conditions.

GENERAL PLASTICS LTD.—31/12/52: Profit was higher than for the corresponding period last year and indications are that the improvement will be maintained for the balance of this year.

H. B. DICKIE LTD.—31/12/52: Turnover and profits were satisfactory. The demand for the company's products continues.

H. H. WEBB & CO. LTD.—31/12/52: Satisfactory results indicate maintenance of ordinary dividends.

HOLDENSON & NEILSON (PRODUCTS) LTD.—31/12/52: Manufacture and trading were very satisfactory. Wages costs were higher, but profits show a substantial increase due to mechanisation.

INDUSTRIAL ENGINEERING LTD.—31/12/52: Turnover of subsidiaries increased appreciably and profit margins have been maintained. Volume of work on hand indicates satisfactory sales for the remainder of the year and maintenance of dividends. Local and export demand is good, and employee strength has been fully maintained.

JOHN HYDRAULICS LTD.—31/12/52: Sales have been more than maintained and demand is strong. New large Plastic Injection Moulding Machine is now in operation.

JOHNS & WAYGOOD LTD.—31/12/52: The volume of work in hand has been maintained at a satisfactory level.

KNOX SCHLAPP LTD.—31/12/52: Earnings were satisfactory despite the deferment of Government orders.

MAINGUARD (AUST.) LTD.—31/12/52: Despite difficult trading conditions and reduced business compared with the same period last year, a small profit was made. Investment portfolio has appreciated since 30th June, 1952.

METROPOLITAN DAIRIES LTD.—31/12/52: Sales were higher than in the previous half-year, and profit margins have been maintained. A new milk treatment and processing depot at Reservoir (in which the company holds a controlling interest) will be in operation soon and expansion will follow.

MINERAL DRILLERS LTD.—31/12/52: Trading is satisfactory and sales have been maintained.

NATIONAL RADIATORS LTD.—31/12/52: Although profits for the six months were not as high as in the same period last year, interim dividend is maintained. Sales for the second half of the year are expected to be higher than for the first half.

POPE INDUSTRIES LTD.—31/12/52: Sales were an all-time record. New administrative block is now occupied.

SILK & TEXTILE PRINTERS LTD.—31/12/52: Sales exceeded the corresponding period last year, and profits have been fully maintained in spite of increasing costs. Substantial orders on hand should ensure full production during the remainder of the financial year.

WILLIAM ADAMS & CO. LTD.—31/12/52: Sales down slightly on the corresponding period last year, but satisfactory. There are indications that conditions generally are improving and profits should continue to be satisfactory, even if at a reduced level.

AUDITOR'S REPORT

The Directors,
Industrial Acceptance Corporation Ltd.,
60 Collins Place, Melbourne, C.1.

Fleet House, 60 Collins Place, Melbourne, C.1.
21st January, 1953.

Dear Sirs,

As Auditors of INDUSTRIAL ACCEPTANCE CORPORATION LIMITED we report that the net profits of the Company in respect of the three years ended 31st December, 1952, were as set out hereunder:—

Year ended 31st December, 1950	£671,661
Year ended 31st December, 1951	£914,414
Year ended 31st December, 1952	£1,407,690

In arriving at the abovementioned figures no charge has been made to provide for taxes paid or payable on income earned during that period, and profits of Subsidiary Companies are only taken into account to the extent of dividends received from them in each year.

I.A.C. 5% INVESTMENT · I.A.C. 5% INVESTMENT · I.A.C. 5% INVESTMENT · I.A.C. 5% INVESTMENT · I.A.C. 5% INVESTMENT · I.A.C. 5% INVESTMENT · I.A.C. 5% INVESTMENT

The Paid-up Capital of the Company, and the dividends paid on the Shares therein out of profits earned in respect of each of the three years ended 31st December, 1950, 31st December, 1951, and 31st December, 1952, were as follow:—

	1950	1951	1952
5% Cumulative Preference Shares—			
Paid-up Capital at year end	£500,000	£500,000	£500,000
Dividends	5%	5%	5%
Ordinary Shares—			
Paid-up Capital at year end	£1,250,000	£1,500,000	£1,500,000
Dividends	12½%	12–11/12%	*

(See below)

* An Interim Dividend of 4d. per share equallying 6-2/3rds% of the Paid-up Ordinary Capital was paid on 24th September, 1952. The Directors have resolved to recommend at the Annual Meeting to be held on the 18th March, 1953, that a final dividend of 5d. per share be paid on the Paid-up Ordinary Capital out of the profits of the year ended 31st December, 1952, which, if and when paid, will total 15% for such year.

This report was prepared for inclusion in a Prospectus for the re-issue of £3,000,000. Registered First Mortgage Debenture Stock.

Your faithfully,
L. B. WALLACE,
R. G. WALLACE,
Chartered Accountants (Aust.).

STATUTORY INFORMATION

1. There are no founders, management or deferred shares.

2. The proceeds of the present re-issue of debenture stock will be applied solely for the redemption in part of existing debenture stock falling due on 31st March 1953 and accordingly no amount must be raised by the re-issue in respect of the following matters:—

(a) Preliminary expenses.
(b) The purchase of any property purchased or to be purchased which is to be defrayed in whole or in part out of the proceeds of the issue.
(c) The repayment of any moneys borrowed by the Company in respect of any of the foregoing matters.
(d) Working capital.

Save the amount of preliminary expenses of the issue, including underwriting, commission and brokerage which is estimated at £79,000 and will be paid out of the income of the Company, no amount is to be provided for any of the foregoing purposes otherwise than out of the proceeds of the issue.

3. No shares or debentures have been issued or agreed to be issued within the two preceding years as fully or partly paid up otherwise than in cash.

4. The total amount paid within the two preceding years as commission or brokerage for procuring subscriptions for Debentures of the Company was £28,505, and the amount payable as commission or brokerage both on the present issue is £60,000. No Director or Promotor or expert or proposed Director is entitled to receive any such commission or brokerage. No amount has been paid within the two preceding years to the date hereof as commission or brokerage for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares.

5. The dates of and parties to any material contract (not being a contract entered into in the ordinary course of the business carried on or intended to be carried on by the Company or a contract entered into more than two years preceding the date of issue of this Prospectus) and a reasonable time and place at which such material contracts or a copy thereof may be inspected are as follows:—

(a) Agreements dated 13th March, 1951, made between Frederic Ernest Bunny, Lionel Ballard Wallace and Executors Estate of Robert Nathan, deceased, respectively, of the first part, the Company of the second part and Robert Gordon Wallace of the third part relating to the acquisition of shares.

(b) Agreements dated 14th March, 1951, made between Herbert William Austin, Byfleet Pty. Ltd., Francie Una Christian, Stanley James Hannan, Lorna Hannan, Executors Estate W. G. Hiscock, Walter Richard Grenville Hiscock, Ian Mathieson Jacoby, Premier Investments Ltd., Timothy George Jones, Louisa Jones, Henry James Lane, Executors Estate R. T. Lane, Stella Maud Adeline Lane, Thelma Marie Lane, Executors Estate B. Nathan, Executors Estate J. Nathan, Lionel Newton, Lauri Joseph Newton, Shirley Schenken, Anne Elizabeth Shmith, Maurice Shmith, Margaret Alexandra Troy and Evelyn May Wallace respectively of the first part, the Company of the second part and Robert Gordon Wallace of the third part, relating to the acquisition of shares.

(c) Agreement dated 15th March, 1951, made between Nancye Ford of the first part, the Company of the second part and the said Robert Gordon Wallace of the third part relating to the acquisition of shares.

(d) Three Debentures each dated 30th July, 1951, given by the Company to the said The Perpetual Executors and Trustees Association of Australia Limited and Registered in Queensland, South Australia and Western Australia respectively.

(e) A supplemental Trust Deed dated 18th April, 1951, made between the Company and The Perpetual Executors and Trustees Association of Australia Limited.

(f) A supplemental Trust Deed dated 9th December, 1952, made between the Company and The Perpetual Executors and Trustees Association of Australia Limited.

(g) Acknowledgments of indebtedness, dated respectively 16th May, 1951, and 15th December, 1952, given by the Company to the Perpetual Executors and Trustees Association of Australia Limited.

(h) An agreement dated 2nd April, 1952, between the Company and William Ian Potter, and Henry Arthur Pitt, carrying on business as Ian Potter & Co., for the underwriting of Debenture Stock.

(i) An agreement dated 27th January, 1952, between the Company and William Ian Potter, Henry Arthur Pitts, Cecil Thomas Looker, Noel Keith Miller and Geoffrey Donald Brown, carrying on business as Ian Potter & Co., for the underwriting of this Debenture Stock.

There are no other material contracts.

Copies of the abovementioned Agreements may be inspected at the Offices of the Company set out hereunder.

6. The business of the Company has been carried on for more than three years.

7. The date of allotment of Debenture Stock subscribed pursuant to this Prospectus shall not be later than 21st April, 1953.

8. The Auditors of the Company are Lionel Ballard Wallace and Robert Gordon Wallace (practising as L. B. Wallace & Son), Chartered Accountants (Aust.), 60 Collins Place, Melbourne; 200 Castlereagh Street, Sydney, and 309 Queen Street, Brisbane.

A.N.Z. Bank Looks Forward

The Hon. Geoffrey C. Gibbs, C.M.G., Chairman of A.N.Z. Bank, has just completed an extensive tour of Australia, and is at present in New Zealand. In his absence the Deputy Chairman, Col. A. T. Maxwell, T.D., presided at the Bank's Annual General Meeting in London on January 2. In the course of his speech he said:

On September 30 last the A.N.Z. Bank completed its first full financial year of operation. A number of places existed where it was clearly desirable to bring the businesses of the two former Banks into one building and to date 44 branches in Australia and New Zealand have been so merged. Shareholders will recall, however, the policy for the new Bank outlined by the Chairmen of The Bank of Australasia and the Union Bank respectively at the Annual General Meetings in January, 1951. It was then pointed out that the new Bank would continue to follow a vigorous policy of expansion and that, side by side with the merging of branches, new branches would be opened in accordance with the requirements of the territories we serve. Following this policy the new Bank has to date opened 24 new branches and 21 new agencies and arrangements are in hand for the opening of a number of further branches and agencies. It will be seen therefore that the Bank is already obtaining the advantage of wider representation and more efficient use of its staff and resources by amalgamating branches at suitable points and, at the same time, entering favourable fresh areas.

Satisfactory Merger.

To summarise the position since the merger, I think that we may feel considerable satisfaction at the results of the year's operations when the administrative task involved in integrating two such extensive banking networks is borne in mind. Not, I believe, since 1918, when the structure of today's great British banks was so largely determined, has there been an amalgamation of two banks in Great Britain, Australia or New Zealand, each with the number of branches of The Bank of Australasia or The Union Bank. The speed and efficiency with which their identities have been blended has evoked favourable comment, not only in Australia and New Zealand, but also in Great Britain, the U.S.A., the Continent of Europe and other parts of the world which trade with the South-West Pacific. This goodwill, combined with our special technical equipment for dealing with overseas business, has been reflected in a solid growth in our connections in many important centres of the the world. In these centres we are enjoying a full share of their banking business with Australia and New Zealand.

Equipped for the Future

The past year's spadework has produced the pattern for Australia and New Zealand Bank, combining the best features of ea of its constituents with many of the most advanced banking techques. From what I have said you will realise that we are w equipped to uphold and enhance the fine traditions which have so long been associated with the merged banks. We are ali to the rapid changes of method which are being nitroduced banking throughout the world and we are seeking to improve o own systems so as to play an ever increasing part in the pr vision of competitive banking services and to meet the widespre and diverse requirements of our customers.

Effects of adverse trade balance.

This is the Bank's first full financial year and the slightly long period covered by the previous Profit and Loss Account submitt to you in February, 1952, should be borne in mind when compari those figures with the account for the period now under review.

The effects of the unfavourable balances of trade of Austra and New Zealand in 1951-52 are clearly shown in the latest accour of the banks. Payments for large stocks of imported goods, sor slackening in domestic trade and the severe restrictions upon i ports imposed early in 1952 are reflected in this bank's figures by fall of £A36 million in Deposits, Bills Payable, etc., £A19 million Acceptances for Customers and £A30 million in Confirmed Credi Guarantees, etc., as compared with the last Balance Sheet. Sor easing of Australia's import restrictions has already been made a it is considered that a continuation of the recent improvement her export receipts will enable the authorities to permit still great freedom in the current year.

Reduction in Special Account.

On the assets side of the Balance Sheet the most notable chan is the reduction of £A60 million in our Special Account balan with the Commonwealth Bank of Australia. This movement has r sulted not only from releases to meet the cash requirements our importing customers but also from the adoption of a mo flexible credit policy by the Central Bank. As a consequence, is indicated by the fall in the amount of Balances due to oth Banks, our liability to the Central Bank for special borrowings, which reference was made last year, has also been reduced. Du ing the period under review our advances expanded by £A33 milli

largely because of the requirements of our customers in carrying greatly increased stocks. Since October the Australian Central Bank has ceased its qualitative control of advances which had been in force since the beginning of the war, and there is consequently a gain in flexibility in the lending policies of the banks.

Profit and Prospects.

As far as the Profit and Loss Account is concerned, the increased earnings from our higher advances have been more than offset by lower exchange profits due to trading factors, to which I refer later, and to higher salary scales and increased general expenses.

In Australia there was a favourable balance of trade for the five months to November last amounting to £A112 million as compared with a deficit of £A198 million in the same period of 1951. Although the improvement in Australia's oversea currency resources is not as great as these figures might suggest, issues of Treasury Bills have increased public liquidity and there have been further reductions in our advances and a seasonal upswinging in our deposits since balance date. A similar picture is evident in New Zealand, where in each month since July the balance of overseas transactions has shown considerable improvement over the corresponding month of the previous year and trading conditions are more active. Altogether there is evidence pointing to a renewed growth in banking figures during the current year, although a reversion to the rates of increase in the recent inflationary period is neither expected nor desired.

Movements in Banking Figures.

The marked changes in trading circumstances in Australia during 1951 and 1952 have had a considerable effect on banking figures. Advances of the major trading banks, which stood at £A510 million in June, 1951, exceeded £A690 million in June, 1952. Deposits, which had risen steadily in a virtually unbroken sequence in the post-war years, stood at £A1,238 million in June, 1951, but had receded to £A1,123 million a year later. This is a striking illustration of the degree of pressure which the trading banks had to meet during the financial year 1951-52, when the Australian economy was swinging over from a period of buoyant oversea trade with an export surplus, to one of abnormally high imports with an accompanying adverse balance of payments.

Release of Funds.

The period was one of strain upon the liquid resources of the whole community and the banks were subjected to heavy pressure as these figures indicate. International currency reserves of the Australian banking system dropped from £A843 million at the end of June, 1951, to £A362 million at the end of June, 1952. It must be mentioned, however, that about £A17 million of this decline was due to adjustments of an accounting nature, and should not be related to trading operations. The drain on the cash resources of the trading banks caused by the important movements of the past year or more has been largely met by releases from Special Account funds of the trading banks with the Central Bank. These declined from £A570 million in June, 1951, to £A303 million in June, 1952, and stood at £A156 million in October, 1952. The greater proportion of Special Account balances accumulated in times of buoyant trading conditions has thus been properly made available in the altered economic circumstances of 1952.

Cushioning the Impact.

It is apparent from these figures that an important part has been played by the trading banks in meeting the demands of the abnormal trading conditions of the period under review. The rapid expansion of bank credit by way of overdraft must be regarded as a major factor cushioning the impact on the community of the deflationary effect of the adverse balance of payments, and preventing forced liquidation of stocks which might have introduced a dangerous element in the circumstances of the times.

These movements in Bank figures as a whole are reflected in our own figures, which I have dealt with elsewhere and which amply illustrate how A.N.Z. Bank has played its full part in supporting its customers during this difficult period.

Central Bank.

The Government has announced its intention of introducing legislation to amend the 1945 Banking Act. Although we had hoped that the Government would see fit to endorse the establishment of a separate Central Bank charged solely with the management of Australia's monetary and banking policy, a number of important changes has been included in the policy statement outlining the scope of the proposed alterations to the existing legislation.

Commonwealth Development.

The Conference of Commonwealth Finance Ministers in January, 1952, initiated measures which led to a great improvement in the balance of trade of the sterling area with the rest of the world during that year. This was followed last month by the Commonwealth Economic Conference the results of which, so far as they have been announced, confirm the hope that those gains will be consolidated and that the emergency restrictions of 1952 will continue to be progressively relaxed leading to a general expansion of trade. We may also expect that Australian and New Zealand potentialities for reducing the dollar gap were fully assessed in the development plans considered at the Conference. We may hope that they will enjoy a reasonable share of investment capital which may be provided for such purposes by the sterling area itself, by other countries and by international institutions. The recent announcement of the formation of the Finance Corporation for the Commonwealth is particularly to be welcomed in this connection for its demonstration of the interest and faith of important British financial, industrial and commercial institutions in the future of a strong and virile Commonwealth.

Ready to play our part

The development plans, like those decided upon by the Governments of Australia and New Zealand during the past year, call for greater emphasis upon basic industry and together may well initiate a second stage of the post-war expansion of activity in Australia and New Zealand. In the first stage the advisory services of the Bank as well as its financial facilities have been active in meeting the needs of migrants and of British and other firms establishing subsidiaries or seeking markets. We are ready to play our part in any further developments, confident in the ever-increasing importance of the South-West Pacific.

Bennie, Teare Ltd.

Reg. Office: 97 Franklin St., Melb. **'Phone:** FJ 9111. **Directors:** A. M. Teare (Chairman), P. Teare, M. J. Nolan, L. J. Cock, J. R. McKenzie. **Auditors:** Holmes & McCrindle.

16th Year ended June 30, 1952. Meeting October 28, 1952.

A sharp decline in trading profits was offset by a smaller provision for taxation, with the result that net profits fell to £16,867 (£18,888).

Dividend on the 5% preference shares, the only class listed on 'Change, requires £3,750.

The organisation controls the major part of Australian production of spectacle frames, lenses, bi-focal lenses, optical machinery and equipment and precision optical instruments.

Due to unforeseen heavy deliveries of imported essential raw materials and the recession in demand, stocks rose by over one-third and overdraft by one-half. Stocks are being reduced as fast as practicable, and with import restrictions the position has improved.

Capital Issues Control consented to a 4½% debenture loan during the year, but this was not raised due to the change in the investment market. As a result, developmental activities have had to be curtailed.

*Adjusted figures from prospectus of November, 1950.

The company was formed in October, 1950, to acquire A. V. Jennings Construction Co. Pty. Ltd. and Burwood Timber Mills Pty. Ltd., which, together with their subsidiaries, are engaged in building and road construction and civil engineering work; also the procurement and manufacture of materials for those activities.

The arrival of imported cement and materials at a time when Government and private building was curtailed adversely affected results. Work for the Housing Commission was reduced after productive capacity had reached unprecedented levels for this work.

Activities have been extended to road and development work for semi-Governmental Departments and to industrial building.

"Our activities have now extended to all States of the Commonwealth except the Northern Territory, and we have found that decentralisation enables us to take advantage of changing circumstances in the various States," said Mr. A. V. Jennings, Chairman, in his address to Stockholders at the Annual Meeting on November 14. His detailed address reads:

Consolidated trading profits were higher than last year, but a comparison with last year's figures shows larger taxation and depreciation provisions, and the allocation to the Provident Funds increased from £6,608 to £10,750. The net consolidated profit at £76,947 is therefore £14,683 lower than last year.

In common with most other companies, our group of companies was obliged to accept, much earlier than expected, the concentrated delivery of imported building materials. These arrived at a time when Government contracts were being cancelled or restricted and many private principals intending to build were experiencing great difficulty in financing stocks of goods themselves and consequently deferred building expansion until conditions became more settled.

Certain material was disposed of but our stocks of timber are higher than normal requirements. However, the improved trend of trade which is now perceptible should enable us to make use of these stocks in our normal programme of work.

Debtors are reduced as compared with last year and this to an extent reflects a lower turnover due to conditions at present prevailing. It might be pointed out here that the amount of civil engineering, industrial building and housing construction carried out by our construction section amounted to over £4,000,000 from January to December, 1951.

Freehold land and buildings increased due mainly to the completion of the joinery factory at Springvale and the establishment of better servicing facilities for Hartwell Engineering Services Pty. Ltd., also at Springvale.

A large part of the increase in plant and machinery was due to plant for Lunnicks (Australia) Pty. Ltd., which is now a subsidiary company. Other purchases were mainly plant for industrial and civil engineering and logging equipment.

Liabilities have decreased since last year, and in particular the bank overdraft has been reduced substantially.

Shareholders' funds have been increased by the new issue of 360,000 ordinary stock units of 10/- each, for which a first payment of 5/- per stock unit was due on January 25, 1952, and a final call of 5/- on May 1, 1952.

General reserves of £34,053 have been created in the books of subsidiary companies, and there is a carry forward of £65,934 in the profit and loss appropriation account.

The final dividend of 4% (making a total payment of 8% for the year ended June 30, 1952) represents £2 per 100 old ordinary stock units and £1/3/4 per 100 new issue stock units.

Survey of Operations.

Our activities have now extended to all States of the Commonwealth, except the Northern Territory, and we have found that decentralisation enables us to take advantage of changing circumstances in the various States. Our booklet, "Further Progress," which has been posted to every Shareholder, indicates the work carried out by our group of companies. Later publications will depict more of the civil engineering and industrial building activities. Trained staff is now available in all States to attend to requirements for work of this nature.

Dealing with specific companies, the position is as follows:—

A. V. Jennings Construction Co. Pty. Ltd.

Turnover for the past year was very satisfactory and was increased by the considerable work done at Eildon for the State Rivers and Water Supply Commission. This work would have been much greater but for the reduced amount of funds available to that Commission.

Housing Commission contracts did not proceed as fast as in previous years owing to sites and projects not being available as and when required. The company completed 3,500 houses for the Commission over a period of 7 years. The homes were spread over the metropolitan area and 21 country centres. To carry out the work over this difficult period it was necessary to overcome many problems of material supply, transport and labour. Our various subsidiaries were specially set up and directed to play a big part in the success of this work. We may be pardoned, I am sure, for

taking great pride in an achievement of its kind unequalled in the Australian building industry.

It is regretted that the difficulties of the Housing Commission have made it necessary for its work to be slowed down at a time when we were geared to achieve a greater production of orthodox homes than ever before.

In the meantime, to replace this work, we have greatly extended our activities in civil engineering and industrial work. Our principals are many, and the work varied. Besides home building and road and developmental work, we are constructing main drains for the M. & M.B.W., road and drainage work for the Gas & Fuel Corporation, Councils and Shires and industrial companies. General building is also being carried out for governmental and semi-governmental bodies as well as private individuals and companies.

The company, in association with our manufacturing subsidiary, Pre-Bilts (Aust.) Pty. Ltd., has a contract with the Public Works Department for the erection of 99 prefabricated classrooms in many parts of the State, and this work is now well in hand. It is anticipated that future contracts of this type will be let locally instead of the orders being placed overseas.

Work on private houses and factory building is now being expanded and with the recent relaxation of credit restrictions greater development in these fields is expected.

A. V. Jennings Construction Co. (Canberra) Pty. Ltd.

Building by this company on a long-term contract is progressing satisfactorily and 100 more men are now employed than at any previous period in Canberra.

A. V. Jennings Construction Co. (Tasmania) Pty. Ltd.

Contracts in Tasmania were by agreement originally restricted solely to work for the Agricultural Bank of Tasmania, but, due to the decrease of funds available to government departments, this restriction was lifted and as a result we are now successfully carrying out works for various Government, semi-Government and private organisations.

Lunnicks (Australia) Pty. Ltd.

Also established in Tasmania, this civil engineering company commenced operations late in the financial year, and, due to the short period of operations, showed a loss. Continual wet weather has made working conditions difficult to date, but better results are anticipated for the balance of the year. A feature of this company is the cable dredging equipment which is not operated by any other company in Australia, and should prove of great value for certain types of excavation. At present some of this equipment is operating in carrying out a large contract at Launceston for the Hydro Electric Commission of Tasmania.

A. V. Jennings Construction Co. (N.S.W.) Pty. Ltd.

With the expansion of activities in New South Wales, a separate company was formed and is operating very satisfactorily, particularly on civil engineering and industrial construction.

A. V. Jennings Construction Co. (Queensland) Pty. Ltd.

Since the close of the financial year our activities have extended to Queensland, and present indications are that our prospects in that State are excellent. Work has begun on a substantial hospital contract.

R. E. Turner Pty. Ltd.

This company was established this financial year in conjunction with an already existing business to extend operations in Western Australia. Contracts being carried out to date are encouraging.

Burwood Timber Mills Pty. Ltd.

Results of this company for the year were disappointing. There was a considerable loss on the sale on an over-supplied market of imported cement bought for Government work affected by the financial restrictions. The writing down of the value of imported stock of general building materials and timber was also a factor. This was also bought for Government contracts. The economic situation caused a slackening of demand for some products, but kiln dried timber and its derivatives particularly are still in reasonable demand. The company is now conducting a vigorous campaign to market goods recently required for the Housing Commission work.

Recent signs of a revival in the general building trade should enable the company to take full advantage of such measures.

The greater part of the manufacturing activities of the Company are carried on at Springvale, Victoria. Timber is air dried, placed in the kilns for final drying and is then distributed to the moulding mill for conversion into flooring, weatherboards, etc., or sent to the joiner's shop for the manufacture of timber component parts of buildings.

The sales organisation, a joiner's shop and general timber yard facilities are situated at Trent Street, Burwood.

The other saw-milling subsidiaries, Mt. Bulla Timber Co. Pty. Ltd. and A. F. Collins Pty. Ltd., are operating profitably and satisfactorily.

Hartwell Engineering Services Pty. Ltd.

This Company has been working under difficulties in the maintenance of plant and vehicles, but with the establishment of more suitable premises it is expected that servicing generally can be improved.

Murray Valley Plaster Pty. Ltd.

Towards the end of the year production was reduced because of lessened demand, but a better trend is now noticeable.

Pre-Bilts (Australia) Pty. Ltd.

This company had a very good turnover for the year and made satisfactory profits. During the current year, work is being carried out for the Public Works Department on prefabricated schools and the company is also maketing the "Pre-bilt" home. Dalgety & Co. Ltd. are agents in country areas, while the A. V. Jennings Construction Co. Pty. Ltd. organisation is handling sales in the Melbourne and Metropolitan areas. Other work carried out includes components for buildings required for Defence purposes which were manufactured through the year, and forwarded by air to their destination.

Provident Funds.

The Provident Funds were subsidised to the extent of £10,750 for the last year. These funds now total £38,288. Your Directors feel that the Provident Funds provide an opportunity for ensuring that employees who have given good service through the years will, on retirement, be rewarded to some extent for those services.

Trading Conditions.

This year has seen building and building supplies placed on a much more competitive basis than for some time. This must be of benefit over a long period as it will enable costs to be stabilised.

There is still a considerable house shortage due in the main to wartime restrictions and a large increase in population. Furthermore, the scope is extensive in industrial and other building, water and power developments and the implementation of the Public Works programmes. In this regard, your group of companies is in an excellent position to assist.

Staff.

In conclusion, I would like, on behalf of the Board, to express our appreciation to the Associate Directors and their Chairman, the Managers of the various sections of the company's business, the Secretary, their respective staffs and all of those in our employ throughout the Commonwealth for their loyal support, co-operation and interest in the company's affairs during the period under review.

I've known Tom for years.....

. . . met him in the street to-day and we chatted as we walked. Mentioned that it was in my mind to see him about fixing up my will so that my wife and the kiddies would be well looked after if anything should happen . . . after all, I have a pretty good business and it *could* keep them in the circumstances they have been used to but, the kids are young and you know what women are like when it comes to running an engineering business . . . Tom offered some suggestions and,

I trust his judgment.....

after all, he is a legal man and his advice is sound and logical. I decided to appoint a trustee company as my executor . . . matter of fact it was . . . NATIONAL TRUSTEES.

National Trustees is an organisation of specialists experienced in ALL phases of family and business estate matters . . . an organisation to which you can entrust the future of your family and the estate which is to support them.

Free literature explaining the full and comprehensive services of National Trustees is readily available to 'phone or mail requests.

"Practically the whole of the trading profit resulted from a very satisfactory year of steady progress at the biscuit factory, during which production figures created a record," stated the Chairman, Mr. A. F. Crosby, at the Annual Meeting on November 28. His address reads:—

Net trading profit for the year was £39,298, an improvement of £11,213 over the previous year's figure of £28,085 and when income from investments amounting to £1,193 is added, the total profit figure becomes £40,491.

Once again the biggest charge against this amount must be in providing for taxation, this year estimated at £18,225, as against last year's figure of £13,425. The addition to the appropriation account, as the result of the year's operations, is therefore, £22,266, and of this amount dividends absorb £12,800, and the employees' benefit fund £1,000, leaving £8,466 to be added to the balance of appropriation account of £17,360 brought forward. This means that we now have the appreciable sum of £25,826 in hand for any contingencies that may arise in the future. In addition, the balance sheet disclosed other reserves amounting to £48,354, so that the company's issued share capital of £153,000 is well protected by total reserves of £74,180, or in other words, by net assets of £227,180.

In comparing the balance sheet as on June 30 this year with that of the previous year, it will be seen that stock on hand has increased by £9,704, but that trade debtors have decreased by £2,675, and in all that there is a net increase in current assets of £6,756.

Fixed assets have increased by £23,532, resulting firstly from the purchase of a valuable property adjoining the company's biscuit factory at Ballarat, and secondly from the purchase of modern transport vehicles to convey bulk supplies of biscuits from the factory to the company's Melbourne and country depots. The acquisition of additional factory space was most opportune and has enabled plans for modernising much of the company's plant at the biscuit factory to be proceeded with. Your Directors are likewise pleased to be able to report that the investment in new road transport has been amply justified in the considerable saving effected in the prevention of breakage, ullage and spoilage in transporting the company's finished goods.

The cost of the new fixed assets has been financed by a corresponding increase in Current Liabilities, principally by an increase in Bank Overdraft, approximately £12,000, and by means of the profit earned during the year.

Sunshine Biscuit Company Division

Practically the whole of the trading profit, to which I have already referred, resulted from a very satisfactory year of steady progress at the biscuit factory, during which production figures created a record. The auxiliary power plant, the installation of which I referred to last year, played a most important part in preventing any loss of production through the power restrictions in force during the greater part of the year. Owing to this greater production and improved delivery facilities, we have recently found it possible to discontinue most of the rationing of customers which was a regrettable but necessary feature of the company's trading for so long.

No difficulty is being experienced in selling the factory's maximum output, and indeed, figures for the first four months of the new financial year show considerable improvement over those for the corresponding months of last year. The carrying of good stocks of raw materials has always been the policy of your Directors and with these at present in hand, and from the good sales figures already achieved, we look forward to another satisfactory and profitable year.

Geo. Farmer & Co. Division

It is again a disappointment to have to report that no manufacturing was carried on at the bacon factory during the past year. Your Directors are continuously, and most carefully, watching the position, and are still of the opinion that a return to manufacturing even on a limited scale, restricted as it would be by the scarcity of pigs of the essential quality, would only involve the company in substantial losses. The plant and equipment at the Division's factory is being maintained in good order, and in the meantime a considerable portion of the premises is being profitably used for cold storage and the manufacture of ice.

Staff

Once again I wish to make special reference to our executive management and staff. The record figures of both profit and production are the result of the untiring efforts of all concerned and on behalf of the Directors, and indeed, of all the shareholders, I wish to record the indebtedness of us all to our staff, and to thank them for the same loyalty and support they have given us during the past year, as they have in former years.

Bramac Limited

Manufacturers of Waterproof Garments.

Reg. Office: Geelong Rd., West Footscray. **'Phone:** MW 1207. **Directors:** J. R. G. McKenzie (Chairman), W. E. Orr, S. G. Cubbins, G. J. W. Leeson, P. S. Thomas, T. E. Osborn. **Auditors:** Wilson, Danby & Giddy.

3rd Year ended June 30, 1952. Meeting November 19, 1952.

Profits were affected by higher costs, restrictions under price control, and the general recession in the textile trade.

Profit, after tax, fell by £5,075 to £17,439, and dividend was 5% (8% last year and 5% in 1950).

"We are dependent to a great extent on the general activity of the retail trade, even though our lines of manufacture are special purpose products which can be mainly classified as essential," said the Chairman, Mr. J. R. G. MacKenzie, at the Annual Meeting on November 19. Mr. MacKenzie's remarks read:

Throughout the year trading conditions were very difficult, and particularly during the last six months. Whilst volume was a little higher than the previous year, measured in terms of money value, we were unable to increase prices of our products to cover all extra costs incurred by wage increases and higher costs of materials and services.

It must be remembered that we are dependent to a great extent on the general activity of the retail trade, even though our lines of manufacture are special purpose products which can be mainly classified as essential.

From the cessation of the world war in 1945 until 1951, very great expansion of trade took place, and in particular the year 1950/51 could be termed a boom year, when spending money was plentiful.

This condition was brought about not only by ever-increasing wages and salaries, but to a greater extent by record wool prices, and high prices gained by other exports. Following the "boom year," wool prices fell rapidly, and due to the flood of imports arriving in the country and the heavy commitments for further imports, a condition was created that became embarrassing to traders, with danger to the economy in general.

Emergency Financial Regulations.

In an endeavour to halt the inflationary trend, the Government brought in emergency financial regulations, curtailing imports and placing restrictions on bank accommodation. These restrictions created difficulties for traders of all kinds, and with the prospect of some unemployment occurring, caused the public to tighten up on spending and changed what had been a seller's market to a buyer's market.

Whilst the Government's actions appeared to be drastic and those responsible were subject to much criticism for it, it is becoming more and more apparent that the policy will succeed. There is nothing spectacular in the change taking place, but there is now a greater feeling of confidence with a slight improvement in trade showing as a result.

The change to a buyer's market is a welcome one. It will help re-establish healthy competition. This condition, however, can only be completely and satisfactorily attained by full co-operation between Management, Employees and Government. Good pay and working conditions for a good day's work in such measure as to re-establish confidence between management and its employees, and on the part of the Government the removal of price and other irksome controls that have outlived their usefulness, but still create work and extra cost to management, and restrict their scope in intelligently pricing their products.

Plants.

A year ago I told you that we had commenced building a factory in Perth. This proceeded through the year, and I am pleased to report that the building was completed and officially opened on 2nd September, 1952. Mr. E. Russell, Chairman of the Perth Advisory Board, chaired the opening function and arranged for Mr. Abbott, Attorney-General, to officially declare the plant open. The thanks of the Board are extended to Mr. Russell and his colleagues—Messrs. J. L. Paton and W. Simpson—for their untiring efforts in bringing this project to a successful conclusion.

I indicated to you plans for further projects for building. However, due to present economic conditions these have been deferred for the time being.

Organisation.

The merger with Associated Rubber Pty. Ltd. has been satisfactory, and we are confident that the future will prove to be beneficial to both companies as forecast in my early announcement.

Future Prospects.

I will not attempt to forecast future results. The Federal Government's financial policy implemented through the 1951/52 budget, and subsequent emergency regulations appears to be succeeding in the objective. The country has been suffering the "pains" of readjustment, but there are signs of improvement in the economy, and reports are to the effect that retail trade is picking up.

I am confident that Australia's economy will be rehabilitated and that when normal trading returns it will be healthier than for many years past.

Employees.

for the loyal services rendered by the staff and all other employees of the company.

I take this opportunity of expressing the thanks of the Board

Briar Limited

Turnover was buoyant early in the year, but has fallen off since late in 1951. While sales were higher than the previous year, increased costs, particularly of imported materials, precluded the earning of reasonable profits.

Formed as a proprietary in 1928, the company has gradually widened its range of manufactures. This now covers domestic and industrial water heating equipment, including gas and electric sink heaters, gas wash coppers, gas circulators and electric, gas and kerosene hot water services.

Yardage woven was 37½% higher, and for the whole year three shifts operated throughout the factory. "More important, actual efficiency has continued on the up-grade, and now measures favourably with world standards."

Despite import restrictions the directors "anticipate securing sufficient supplies of raw materials to meet manufacturing needs."

Concessions, particularly in respect to freight rates, granted by the State Government as an inducement to the company to establish itself at Wangaratta have been withdrawn and "promises originally made are not being fulfilled."

Bruck Mills Ltd. (Canada) which has a minor holding in the company, provides access to technical knowledge. It also holds an option until July, 1956, over 100,000 £1 ordinary shares at par.

A wholly-owned subsidiary operates a business established in 1893. Its activities comprise the merchandising of materials and machinery for the printing and newspaper trades; also the manufacture of various kinds of printing inks for newspaper and magazine production as well as for the printing trade.

An interest is also held in an associated company operating in New Zealand.

An upswing in activity in the organisation's factories in recent months has taken place.

"An upswing has been noted in our factories in recent weeks, which is pleasing in view of the lower tempo experienced in the early period of the current year's trading," stated the Chairman, Mr. W. Collie, at the Annual Meeting on November 14. His address reads:

The consolidated net profits for the year were £62,668 after providing £4,147 depreciation and £51,000 Federal Income Tax. This compares with profits of £78,931 in the previous year after providing £7,906 depreciation and £66,843 for Income Tax.

In keeping with experience in industry in general trading conditions became less buoyant in the latter part of the financial year. Sales of the operating company were lower than in the previous year due mainly to the drop in machinery sales, which I anticipated in my last address.

Supplies of news and magazine inks to the newspaper and publishing industries, as anticipated, also decreased. However, increases were made in the sales of fine letterpress and offset inks and in our new Bingham plant.

In common with other trades, expenses continued to rise steeply, particularly in salaries and wages, and it was found necessary to absorb some of these increased costs of manufacture in order to maintain sales, with consequent decline in gross profit. These are the main factors which have contributed to the decline in the net trading profit.

Present Trading.

An upswing in activity has been noted in our factories in recent weeks which is pleasing in view of the lower tempo experienced in the early period of the current year's trading.

Dividends for the year absorb £35,000 out of the total profit of £62,668. The remainder, £27,668, is added to the amount carried forward which now stands at £49,625.

Stocks and advance payments for stocks show a slight increase as compared with the previous year. Action is being taken to bring stocks into line with current requirements.

Capital expenditure during the year totalled £15,095. Other balance sheet changes are not of great significance and do not call for further comment.

Overseas Affiliations.

The company is fortunate in having Mr. H. J. Wolfe, President of the Kienle Ink Company, New York, U.S.A., and internationally recognised as a world authority on printing inks and processes, as its technical and scientific consultant.

Mr. Wolfe visited us in February and expressed pleasure at the efficiency of our various manufacturing divisions. His suggestions and plans will now assist materially in further improving technical efficiency, particularly in the manufacture and control of the numerous base varnishes now used in modern printing inks.

During the year our technicians have progressed materially in production of Aniline and Gravure Inks for printing on cellulose film and other difficult synthetic wrapping materials.

Brillset and gloss set inks, our latest productions, have been enthusiastically received by letterpress printers, whilst the company has just launched a new series of quick setting inks under the name of "Readyset."

Colour Printing.

The recent regular introduction of colour has been the outstanding feature of daily newspaper production in Victoria. Our associate, J. M. Huber Corporation, largest U.S.A. manufacturer of black and coloured rotary inks, avers that the Australian productions, both high-speed rotary letterpress and high speed rotary offset, are more than equal to similar daily newspaper productions in the United States. As the manufacturers of both the high speed letterpress and offset inks, we are proud to associate ourselves with this achievement.

Our associate New Zealand company, Printing Inks and Machinery Ltd., has progressed favourably since we joined forces, and their productions have been considerably improved. This association has been mutually profitable and helpful to both concerns.

Business Conditions.

In keeping with the policy of maintaining personal touch with overseas suppliers and consultants, our third generation Printing Ink Maker, in the person of Mr. R. W. S. Collie, will travel abroad early in the New Year. He will spend considerable time with the larger printing ink manufacturers in both England and America, and study the latest ink formulations and manufacturing technique.

Although most raw materials needed in our industry are readily available from British and Australian manufacturers, some few, obtainable only in the U.S.A., are unavailable to us, and in consequence we are unable to reproduce some of those inks and materials which are now produced in America.

However, I desire to place on record my appreciation of Government understanding of the importance of our industry in that we have met with but few difficulties in respect of import licences for essential raw materials.

Staff.

I wish to convey to employees, staff and management the appreciation of the Directors for their loyal service during the year.

*In 1951, incl. an additional £53,925 share premiums; in 1951, a bonus issue of £133,000 was made from share premium reserve.

Increased competition from State railways and owner-driver hauliers; interruption of the Kiewa Dam contract; a fire at the Brooklyn depot; increased cost of wages and materials and maintenance caused by deterioration of road surfaces; also less effective use of the transport fleet and general recession in trade were many of the problems faced during the year.

Total assets increased by £270,000, including £240,000 motor vehicles. Liabilities, however, increased by only £60,000, because of new capital introduced and retention of the year's profit.

Net tangible asset backing (book values in consolidated balance-sheet)—5/9 for each 5/- stock unit, allowing for new issue since balance date.

Referring to rail transport competition, the Chairman, Mr. J. Collier, stated at the Annual Meeting on November 19 that "this politically controlled body has made a positive move to drive interstate road hauliers off the highways by making a substantial reduction in freight rates between capital cities, whilst, at the same time, increasing rates within the State." His address reads:

The Company has faced a very difficult year. Circumstances beyond the control of the Directors have beset us throughout the whole period.

The economic situation has affected the company, both directly and indirectly.

Kiewa Dam Project.

Some two years ago a contract was entered into with the State Electricity Commission of Victoria for the cartage of materials and stores from Bandiana in connection with the Kiewa Dam Project. This contract was for a period of seven years, during which haulage would build up for two years, run at a peak for the next three years, and gradually fall off over the last two years. Total estimated value of revenue was approximately £300,000 over the period.

After expenditure of a large sum of money on special heavy duty trucks, and the acquisition of land and buildings for a depot and maintenance shops, the whole project lapsed through the cessation of Loan Funds, even before the company had had any opportunity to enjoy a part of the peak.

For some time there was considerable doubt as to the position of parties which held contracts with State Government bodies, and which were rendered impossible of performance through the edicts of the Federal Government. During this period of uncertainty, the company had to be ready at all times to carry out its share of the contract, although materials for haulage were reduced to a mere trickle. As a result, heavy direct loss was sustained.

Indirectly, the present economic situation has affected not only this company, but others engaged in our type of haulage. The trade recession has meant less goods for transportation, thus enabling the Railways to carry a higher proportion of general merchandise than they were able to do previously.

If this position be analysed, it will be realised that reduced quantities of available freight are due to inability to produce to a price at which finished commodities may be sold, and to a marked buyer resistance to higher consumer costs.

The reflection on cartage is not only less quantity available for transport, but also a fiercer competition for that quantity.

This rivalry comes from two sources, owner-driver road haulier operating at reduced rates, and from the Railways.

Rail Competition.

Of these two means, we are less concerned over the rivalry o the road than we are of this politically controlled body which ha made a positive move to drive interstate road hauliers off the high ways, by making a substantial reduction in freight rates betwee capital cities whilst, at the same time, increasing rates within th State.

While they force the unfortunate taxpayer to finance rail de ficits by reducing interstate rates, and try to force us off the roa by permits, the New South Wales Railways themselves are com peting with a fleet of some 300 vehicles engaged in road haulag

Permits.

In addition to freight rate competition, we—as road hauliers—are subject to an iniquitous system of permits issued by Goverr ment bodies, which decide whether we may enjoy back loading.

As an illustration of the latter, suffice it to say that not s long ago, if a tanker were required to take a bulk liquid consign ment to Sydney—remember the break of rail gauge at Albury—we could obtain back loading. Now, however, that vehicle mus return EMPTY, unless it is carrying one of the few permissibl commodities. The result is that we must either charge sufficien to cover expenses of the return trip, or dissipate our profits on one way run by coming back at our own expense.

In the first place, the consumer would pay by the additiona freight, thus adding to the inflationary spiral, or else our share holders must pay by reduced earnings.

So far, remarks have been confined to the Melbourne to Syd ney route. Even more severe restrictions apply between Sydne and Brisbane, also between Melbourne and Adelaide. In both thes cases there is no break of gauge between capital cities. The Rail ways are common carriers, which we are not, so competition is me by a system of permits so restrictive in its field that little is lef for road hauliers.

Experience has proved that between the terminals named, on way traffic is the aim, in order to enforce empty return trips. B this means, Governments endeavour to claim that the permit sys tem is not so iniquitous as road hauliers state. It is an insidiou but transparent political discrimination, aimed solely at creatin a Government transport monopoly.

Contrast this with the encouragement and praise accorded road hauliers for the part they played during the war, and in later emergencies.

Truly, memory is short! Now, all the interest that politicians have in us is to extort as much tax as they can from us and, at the same time, attempt to destroy our means of livelihood.

There is no surer way to regiment the life of a community than to control the means of transport of all forms of consumer goods, whether foodstuffs, apparel, or the raw materials which are processed in order to satisfy demands of the family unit.

Petrol Tax.

In addition, road transport is subject to every form of taxation devised to drain off the fruits of industry, while Government competitors are subject neither to permits, nor to taxation, leaving citizens to subsidise losses.

Therefore, the Treasury may be accused of a "two-faced" attitude, when it imposes crippling taxation towards its consolidated revenue, whilst at the same time permitting partisan political interference, aimed solely at eliminating the greatest contributors, the motor industry generally and the road haulier in particular.

In support of these contentions, I quote Petrol Tax figures from the Commonwealth Statistician:—

The latest information available reveals that Victoria's annual contribution under this heading is £8,000,000, of which only £3,000,000 is passed back to the State for maintenance of roads.

Over the last twenty financial years, total Commonwealth revenue from Petrol Tax was approximately £221½ million, of which Victoria contributed £66⅔ million. The returns to all States were about £84 million, of which Victoria received nearly £15 million.

In addition to Registration Fees, the late Mr. H. Harrison, of the Chamber of Automotive Industries, revealed that Permit Fees paid to State Transport Boards amount to £2,000,000 annually.

Road Conditions.

Road users generally, and this includes private as well as commercial users, have been complaining for years about the poor state of Australian highways and roads.

It is the "easy way out" for Government and quasi Government bodies to make loud outcries against the damage caused by heavy transports. This attitude is supine, and born of the desire to use expedients rather than to attack the problem at its source.

Roads break up because of weather conditions which undermine them when the sealing surfaces are allowed to deteriorate. When foundations are insecure, any traffic will destroy a road.

The true story of the state of Australian roads is that, originally, they were not designed to take modern high speed traffic, and little or no effort has been made to modernise the roads or, when building new ones, to construct them to a standard suitable to present day requirements. Good roads are not a luxury. They are a necessity and, in time of war, are vital.

It is high time that all road users who contribute such vast sums to Commonwealth revenue by way of petrol tax, and to State revenue by way of road tax, banded together to demand that the full revenue from these sources be spent on the construction or maintenance of roads, which was the purpose of levying the taxes, rather than paying large proportions of the collections into the consolidated revenue.

The bad state of the roads is the cause of heavy wear and tear upon our vehicles. Thus, in addition to paying our taxes, we are compelled to expend vast sums upon maintenance of the fleet, and upon replacement of tyres.

We expect heavy duty vehicles to cost considerable sums in maintenance, and we can estimate the life of a tyre within reasonable limits. Our drivers are experienced men who have nearly all been with us for some years. We have enjoyed a year of operations with major accidents the lowest on record, yet our maintenance costs have soared. The abnormal amount is in direct ratio to the state of the roads.

Within the Company itself there have been noticeable causes of reduced profits.

Brooklyn Depot Fire.

The first is the setback which the company suffered in the fire at its Brooklyn Depot last January. This fire was serious, but by the cool courage of the staff present at the time, far more extensive damage was averted.

Although material loss was covered by insurance, the dislocation of the activity at the depot proved costly.

This brings us to the second point of internal change, which has become apparent during last financial year.

New Vehicles.

In the past, it was possible to purchase a new truck, register it, load it, and despatch it interstate in the one day! Within trade terms of purchase, this meant that the new vehicle became an earner of income before the company was obliged to pay for it!

During the past year, however, there has been a great change. Some two years ago the company not only visualised a growing demand for special types of vehicles, but in fact received enquiries for them from many sources. Substantial orders were placed, and as deliveries were effected, the vehicles had to go to engineering shops for the fitting of bodies. Owing to delays, the completion of this work was retarded seriously. While all this was in progress, the truck itself had to be paid for. Thus, for the time, the company had substantial sums expended on units which were not earning revenue. In other words, capital was idle.

When the vehicles did become available, the recession had set in, and many projects which would have been dependent upon this type of cartage, were suspended. To dispose of such a valuable fleet would be to create ready-made opposition when the wheels of industry turn again.

Finally, with the growth of the company's fleet of large vehicles, it became essential to have one central parking depot. In the past, dispersal of vehicles has been costly, and rendered economic employment difficult. Now with a centrally situated park of our own, it is considered that the initial capital outlay will prove to have been spent wisely.

Future.

Your Directors are confident that you will appreciate their difficulties over the last year, and the additional problems they are facing this year. They have the whole position under constant review, and are making every effort to meet the changing economic situation. The Company is sound, and by effort and well directed industry, it can and will prosper as before.

General Australian Terminal Corporation Pty. Ltd.

During the year an Associate Company, known as General Australian Terminals Corporation Pty. Ltd., was registered in Sydney.

Its purpose was to instal and develop bulk liquid terminals throughout Australia.

It had been hoped that this Associated Company, which would have been of material advantage to Collier's Interstate Transport Service Limited, would have been expanded to public company status by now.

Unfortunately, prevailing economic conditions have retarded development.

Staff.

In conclusion, I should like to pay tribute to my co-Directors for the loyal support they have accorded me throughout the year. Also, I should like to place on record the Board of Directors' appreciation of the hard work and achievements of all members of the staff and employees.

Latest—3/9.

"Sales have steadily improved since June, and the percentage of expenses to sales has been reduced," stated the Chairman, Mr. D. H. Clark, at the Annual Meeting on November 19. His address reads:

Despite an increase in sales, the gross profit percentage sales decreased slightly, and combined with a steep increase operating costs, particularly wages, a net loss of £967 was incurred. Adverse trading conditions for the retail trade generally were experienced over the major portion of the year. Sales have steadily improved since June, and the percentage of expenses to sales has been reduced.

Increased rates of taxation, made law after the publication of our last year's accounts, made it necessary to provide a further £1,366 out of profits for the year ended 30th June, 1951. An advance payment for Income Tax for the year ended 30th June, 1952, has to be paid with the 1950-51 assessment. There being no Income Tax payable by the company in respect of the year ended 30th June, 1952, a refund of £422 is anticipated.

New Issue.

As forecast in the last annual report, an issue of 141,000 shares of 5/- each was made in November, 1951, bringing the Issued Capital to £105,750. The money raised has been used as follows:—

Funds provided by increase in Capital	£35,2
These Funds were applied to—	
Increase in Working Capital	16,6
Purchase of Fixed Assets	16,2
Taxation provided, as shown above	1,3
Net Loss for the year	9

Balance Sheet.

The Balance Sheet discloses an improvement in the company's working capital position. The surplus of current assets over current liabilities has increased by £16,670. Stocks on hand show an increase over 1951 due principally to several overseas shipments arriving in the last few months of the financial year. The bank overdraft, creditors and debtors have been reduced considerably.

The value of Fixed Assets increased by £16,247 during the year under review. The Company owns the freehold of our Cheltenham, Richmond and Footscray stores. During the year a further store was opened at Caulfield, and with the Royal Arcade store, the total stores operating is now five.

Reference has already been made in the Directors' Report in regard to the Associated Companies in New South Wales and Queensland.

We have passed through a difficult year, but industry and trade has brightened considerably. This, I feel, has been due to the Government import restrictions which have strengthened Australian trade considerably. Rubber goods manufacturers are now producing more lines, and competing keenly for business, which is resulting in increased opportunities for an organisation such as ours.

Brown & Dureau Limited

Manufacturers' Representatives, Importers and Exporters.

Reg. Office: 428 George St., Sydney. **Head Office:** 422 Collins St., Melb. **'Phone:** MU 8621. **Directors:** K. F. Dureau (Chairman and Manag. Director), F. A. Still, J. W. Goulding, F. H. Johnson, W. H. Hindle, W. B. Dureau. **Auditors:** Fuller, King & Co.

7th Year ended June 30, 1952. Meeting December 5, 1952.

Although total sales for the year were a record, turnover during the latter half was at a considerably lower level. As the net profit after tax amounted to £15,097 (compared with £55,557), no ordinary dividend was recommended.

Credit restrictions and the reduction of public works programmes caused the cancellation of many orders, and an accumulation of stocks which had to be marked down to current values.

"We have intensified our regular critical surveys of costs, with the object of making all practicable economies," stated the Chairman, Mr. K. F. Dureau, at the Annual Meeting on November 21. Mr. Dureau's remarks read:

In my address at the Annual Meeting last year I referred to the various factors which were likely to have an adverse effect on the company's trading, but stated that, nevertheless, the Directors then considered that profits for the year ending 30th June, 1952, would compare favourably with those of the previous year.

Since then, however, credit restrictions have been more rigorously applied, Government works very drastically curtailed and some reduction in general business activity has been widely experienced. These factors resulted in a significant reduction in turnover during the last half of the year, with a consequent substantial increase in the volume of stocks held at the year-end, some of which have been written down because of market fluctuations. This applies particularly to capital equipment for primary and secondary industries and governmental works programmes, in respect of which the company had to accept many cancellations of orders, although it, in its turn, was committed to accept deliveries from its suppliers.

Changes in Financial Position.

Fixed assets (after providing for depreciation) increased by £63,555 during the year, of which the greater part is represented by necessary additions and replacements to the plant of the Company's starch factory and weaving mill in Sydney, the aerial survey division and the tractor maintenance shops in all capital cities.

Current assets increased by approximately £525,000 during the year, practically the whole of which amount is represented by merchandise stocks. I have already referred to the factors responsible for this increase, which occurred despite planned reductions in ordering, operative for most of the year. However, the effect of these measures is now becoming apparent, and unless we experience a further major deterioration of business conditions, we expect to materially reduce stocks by the end of the current financial year, with a consequent betterment of our liquid position.

Current liabilities have increased by approximately £392,000 to £1,550,000; the major movement being in bank overdrafts which have increased by approximately £421,000 to finance the higher level of stocks held.

During the year shareholders' funds increased by £181,003 to £758,108, which increase includes the introduction of new ordinary capital amounting to £170,000, the remainder being retained earnings.

Total reserves and unappropriated profits at 30th June, after deducting intangible assets, amounted to £141,843, equivalent to approximately 6/9 for each £1 ordinary share.

Future Prospects.

Although the severe import restrictions imposed in March, 1952, had no material effect on the results of operations for the year under review, a prolonged continuance of such restrictions would have an adverse effect on the company's earning capacity, as a substantial part of our income is normally derived from our importing business. Your Directors have taken measures to counteract this situation by widening and developing the company's activities in the distribution of Australian manufactured products, and success has been achieved in this regard. We have also intensified our regular critical surveys of the costs of doing business, with the object of making all practicable economies, and so to enable us to gain the maximum net return from a somewhat reduced gross income. These measures, in conjunction with our programme for conserving and strengthening cash resources, will be the keynote of our operations for the current year.

Staff.

In conclusion, I should like to express, on behalf of the Board of Directors and, I am sure, of shareholders also, our appreciation of the splendidly loyal and efficient service rendered by branch managers and staff. Their enterprise, experience and enthusiasm is a source of real strength and encouragement to our organisation, and to them I would like to say—thank you.

Burlington Mills (Australia) Ltd.

Manufacturers of Rayon Piece Goods, Furnishings and Tapestries.

Reg. Office: 133 Pitt St., Sydney. **Directors:** R. J. Webster (Chairman), R. L. Huffines, Jnr. (alternate, W. E. Rettew), F. M. Keighley, L. A. Lochrin, W. E. Rettew, J. H. Wright (alternate, W. E. Rettew), W. Scott. **Auditors:** G. O. Bennett & Co.; Flack & Flack.

13th Year ended June 30, 1952. Meeting November 10, 1952.

A loss of 71,045 was sustained, and no ordinary dividend was paid (last year 8%). Overdraft rose by £524,000, due mainly to an increase in stock of £436,000.

*In 1952 provns. of £31,253 no longer required were w/back.

From its large leasehold factory at Rutherford, the company produces tapestry and other furnishing cloths, and a wide range of dress materials, including crepes, ninons, satins, marquisettes, poplins, gabardines and ribbons.

Between September and March heavy imports of furnishing fabrics combined with a fall in demand caused a collapse of the market, and the mill ceased production of these lines for many months.

Tariff protection has since been obtained and production has recommenced, but it is limited by loss of trained operatives.

The rayon weaving division made a profit despite the temporary suspension of duties on rayon materials and heavy imports. Double shift operation has now been resumed.

When production declined, raw materials continued to arrive for some time from overseas, but this is being rectified and it is now possible to order for foreseeable requirements only.

*Adjusted figures from prospectus of April, 1951.

The company, which was formed in December 1950 to acquire six associated proprietaries, holds the Jaguar Car franchise for Victoria, New South Wales and Tasmania; distributing rights for Victoria of the Morgan Car, the Ariel Motor Cycle, and the Lambretta Motor Scooter. It also operates servicing and spare parts divisions in Melbourne and Sydney as well as a second-hand car business in Sydney.

A change-over in models of the Jaguar affected supplies in the early months of the year, but good quantities were received until imports were restricted. These restrictions adversely affected the company for the remainder of the year, and their continuance is limiting sales.

Bryson Industries Ltd.

"The import restrictions now in force may prevent the importation of sufficient vehicles to enable us to achieve results comparable with the past year," stated the Chairman, Mr. J. B. Bryson, at the Annual Meeting on November 27. His address reads:

Your company's service division for Victoria is now properly established in its new premises at 79 Yarra Bank Road, South Melbourne, which comprises some 50,000 square feet all on one floor, and I am satisfied that the efficient service given in these premises plays an important part in the creation and fostering of goodwill between Jaguar owners and your company.

In addition to the building at Bourke Street, Sydney, your company also owns a substantial freehold at Miller Street, North Sydney. During the past year very extensive alterations have been made to the latter premises, and although it is not yet completed it is now one of the finest buildings of its kind in Sydney. In it also the company has set up a servicing department, and now that all initial difficulties have been overcome I am certain that it will prove a profitable adjunct to the organisation.

It has been apparent for many months that the company's leasehold premises at 322 Elizabeth Street, Melbourne, are quite inadequate for the proper conduct of the sale of Ariel Motor Cycles and spare parts. Arrangements are now almost completed for the removal of this division of your company's activities to the nearby Brandt House, of which the company owns the freehold. I am happy to report that the company or its subsidiaries do not now occupy any premises where security of tenure is in doubt.

Franchises.

In addition to the franchises for the Jaguar, the Ariel Motor Cycle and the Morgan car, your company also acquired during the year the franchise for Victoria for the distribution of the Lambretta Motor Scooter. This type of vehicle represents a new mode of conveyance.

Lacy & Osborne Pty. Ltd.

During the year under review this company's activities in company with all other merchants dealing in luggage and travel goods were severely affected by an unprecedented sales tax. I am glad to be able to report, however, that at the present time trading is brisk and prospects are good.

Continental Finance Co. Pty. Ltd.

During the past year your company acquired almost the whole of the shares of a well-established finance company which for many years had handled almost all of the financing of sales by our company of motor cycles and Morgan cars. At the same time another subsidiary under the name of Continental Finance Co. (N.S.W.) Pty. Ltd. was established in Sydney for the purpose of handling some of the hire purchase finance of the New South Wales divisions of the company. I am confident that both these subsidiaries will in the long run prove valuable additions to the organisation.

Annual Accounts — Dividend.

After provision for taxation (£52,097) the writing off of intangible assets (£11,972) and provision for preference dividend (£2,500) a balance of £51,847 remains available for distribution. The result for the period under review is considered by your Directors to be satisfactory, especially taking into consideration that some dislocation of trading activities occurred during removal operations to permanent premises. Your Directors therefore recommend that from the available balance of £51,847 an ordinary dividend at the rate of 15% per annum shall be paid, requiring £37,500, and that the balance of £14,347 shall be carried forward as a credit balance in the Profit and Loss Appropriation Account.

Future Prospects.

On the credit side we have the continued public demand for the Mark VII Jaguar car and our other vehicles, a well trained staff, splendidly situated sales premises in Melbourne and Sydney, well established service stations and an adequate stock of spare parts. At the same time, however, your Directors are somewhat concerned that the import restrictions now in force may prevent the importation of sufficient vehicles to enable us to achieve results comparable with the past year. It is, however, too early to make any definite statement in this regard, but I feel it my duty to sound a note of caution in case the existing stringent restrictions should remain in force.

Import restrictions introduced in New Zealand, which had been the company's principal export market, and dumping by German manufacturers in the Eastern markets, were some of the year's difficulties.

In September, 1952, the Australian price was again raised from £65 per ton to £95 per ton.

Since balance date production remained on a restricted scale, and demand was limited, resulting in unprofitable trading. In recent weeks, however, production has been stepped up in meeting a better demand.

In addressing shareholders at the annual meeting, the chairman said—

"Recently the paint industry has experienced marked changes, and you will no doubt be aware of the extensive advertising campaigns organised in support of non-white lead paints. Whilst your directors are aware of the claims made by manufacturers of new types of paints, they are confident that white lead is, and will remain, one of the most important pigments used in outdoor painting.

"Although the paint industry is the largest user of white lead, avenues for its use in other industries are constantly being explored, and at present your company is supplying white lead for use in formulations where heretofore other chemicals were utilised."

*Debited with losses on sale or scrapping of fixed assets (1952, £907; 1950, £16; 1949, £270); credited in 1951 with £3,580 profit on sale or scrapping of fixed assets.

†Incl. 10% bonus in 1949 and 1950, and 15% bonus in 1951.

The company is engaged in mining and production of zinc concentrate and lead concentrate at Rosebery on the West Coast of Tasmania. The zinc concentrate from Rosebery together with larger quantities of zinc concentrate from Broken Hill are treated at Risdon for production of metallic zinc, cadmium, sulphuric acid, and superphosphate. The lead concentrate is realised in U.S.A.

In September, 1952, the Australian fixed price for zinc was raised from £65 to £95 per ton provided that up to 60,000 tons per annum was supplied to the local market, as compared with local consumption of 48,764 tons in 1951/52.

Since July, zinc prices overseas have continued to decline and on the resumption of free market dealings on the London Metal Exchange in January, 1953, may decline further, as occurred in the case of lead.

Although power shortages limited production at Risdon to 15% below full capacity, 83,501 tons (last year 77,529) of zinc and 67,246 (50,765) tons of superphosphate were produced.

The company is gradually discontinuing the roasting of zinc concentrate and the manufacture of sulphuric acid at centres on the mainland and these activities will be transferred to Risdon. Good progress has been made with the construction of the new sulphate of ammonia plant at Risdon and subject to availability of power, production is expected to commence late in 1954. The first section of a new plant for the recovery of zinc content of residues is expected to be in operation by July, 1953. In addition to these projects, expansion is proceeding at Rosebery and Risdon.

"On either a long-range or short-term view, the company is well placed and occupies an advantageous position as a producer of zinc and lead concentrates, zinc metal, sulphuric acid and fertilisers. We therefore face the future, whatever it may hold, with full confidence," stated the chairman, Mr. Harry Hey, at the annual meeting held on November 25. His address reads:

Before opening the formal proceedings, I desire to mention two matters. Firstly, the sad circumstances under which we meet today because of the death last week of our chairman of directors, Sir Walter Massy-Greene. Sir Walter joined the board of this company in 1933 and was chairman of the board since 1946. His wide experience of business matters and his close touch with national affairs were of particular benefit to those companies with which he was associated. Sir Walter occupied positions of great trust and importance. He was a man of the keenest intellect and an indefatigable worker. He was, above all, an ardent believer in the development of Australia's resources, and his powerful influence was directed towards the establishment and expansion of local industries, primary and secondary. Although a very busy man himself, he always found time for the many who sought his advice and guidance. Anyone who had been associated with Sir Walter could not but respect and admire him. He was one of Australia's big men, and his loss will be very deeply felt, not only by this company, but in the very wide circle of his business and other interests. I am sure you would wish a message of sympathy to be conveyed to Sir Walter's family as from this meeting.

Secondly, I wish to announce that my colleagues have honoured me by electing me chairman of directors of the company. I realise the great responsibility this carries, and I shall do my best to hold to the high standards set by the distinguished men who have held this position before me.

Lead and Zinc Prices.

The profit for the year again sets a record—due to the extra tonnages made available for export through increased production and to the very high prices ruling during the greater part of the year for zinc and lead realised in overseas markets. But it is appropriate to add that overseas prices have been falling steadily during the past few months, and, even if there is no further decrease, there will be a marked contraction in the gross surplus for the current financial year. Further, as mentioned in the directors' report, additional zinc is to be supplied to the low-priced Australian market, thus reducing the quantity available for export. Moreover, the British Government has announced that zinc will revert to private trading as from January 1, 1953. The Government will then cease its activities as the sole importer of zinc into the United Kingdom and will crease trading, except insofar as is necessary to wind up its trading operations. From that date the sale and purchase of zinc will revert to the London Metal Exchange, as has already been done in respect of lead. We anticipate that it will

(Continued on next page)

ELECTROLYTIC ZINC CO. OF AUSTRALASIA LTD. (Contd.)—

not be long before a standard world price will emerge and an end will be put to the present unsatisfactory market position under which differing prices are being quoted in Europe, London, America and elsewhere. Sooner or later this change was inevitable, but we would like to record our appreciation of the manner through the long period since 1939, on the outbreak of war, in which the British authorities have conducted the negotiations between us for the sale and purchase of the metal.

It is, of course, unlikely that the wide variation between the local and the export price will continue, though, at the moment, it is still substantial.

Profit Appropriations.

In view of this situation, and in the face of the heavy commitments involved in financing the large programme of extension of the company's activities, your directors gave very close consideration to the whole position before determining the allocation of the record profit, arising from conditions that are not likely to be repeated this year. By fixing the dividend distribution at the record figure of £1,350,000 for the year and adding £1,420,000 to the reserves (including the reserve for depreciation), it is considered that a wise division of the available profit has been made. As the announcement by the British Government of the return of the market to the London Metal Exchange was subsequent to the declaration of our dividend, that has fortified the wisdom of the decision made by your directors.

Taxation.

The Government, of course, still figures as the largest participant and takes directly from the company £2,100,000, representing approximately half the net surplus. In addition, the tax on the amount distributed to shareholders would not be less than £250,000, so that in the final issue the Government share of the profits is £2,350,000, as against a net return of £1,100,000 to shareholders.

Coupled with the fall in the purchasing power of money, this heavy taxation on companies and individuals raises very serious problems.

Under the system of free enterprise, money saved is the only source of new capital. If this system is to survive, it seems that more consideration will have to be given by the powers that be to the situation that is arising under which, both in peace and war, ever increasing burdens are being placed on the shoulders of the taxpayers. Gradually but surely the springs of new wealth are being dried up and in the long run avenues of new employment will be closed. The effects may be slow in manifesting themselves, but that they will eventuate seems certain.

It has always been the policy of this company to make substantial reservations from profits. This has been the main reason for its present strong position. It speaks for itself that the company has undertaken an extension programme, certainly spread over five or six years, but nevertheless costing nearly double its subscribed capital, without calling on shareholders for additional funds. Some members may have preferred a policy calling for full distribution of available profits by way of dividends, and the calling up of fresh capital to finance the new works. This, however, would not necessarily operate to the advantage of most shareholders, since it would interpolate the tax-gatherer between the receipt of dividends and the subscription of new capital.

Accounts.

Now to mention the more important figures and speaking to the nearest £1,000, the net profit for the year was £2,112,000, compared with £1,578,000 for the previous year. This profit, which represents a return of 18.03% on funds used in the business, was arrived at after making the provision of £750,000 for addition to the reserve for amortization, depreciation and plant renewals and £2,120,000 for tax. The net profit of £2,112,00 has been applied:

1. in payment and appropriation for dividends totalling £1,350,000;
2. for expenditure on new plant at the company's West Coast Mines—£93,000;
3. in transfer to general reserve of £150,000;
4. in transfer to reserve for new plant and development—Risdon—£500,000;

and, finally, by increasing the carry forward in the appropriation account from £288,000 to £308,000. The various reserves now total £10,099,000, the major portion of which is invested in the company's business.

It will be noted that no appropriation has been made this year to the reserve for mine depreciation (ore depletion). The total amount in this reserve at June 30, 1951, was £525,000, practically equivalent to the mine account appearing in the balance sheet.

Operations.

The reports give details of the year's work at Risdon and Rosebery, and there is little to add to them. Production efficiency was well maintained at both centres, and, despite the perennial shortage of skilled tradesmen, the over-all labour position has improved considerably.

It can be anticipated that output during the current financial year will be well up to last year's standard, subject, of course, to no further restrictions being applied to the power available to us.

Zinc Sales and Prices.

Mention is made in the directors' report of the increased quantity of zinc to be supplied to the local market. This was a condition set down by the Commonwealth in the negotiations leading to the increase in the Australian price in September last to £95 per ton. It is understood that the condition was designed to meet a demand for additional galvanized iron and wire to support the Government's food production drive. This is perhaps a reasonable viewpoint, but, at the same time, it should be stressed that the increase in the quantity of zinc for local consumption was not accompanied by any effective steps to bring all Australian producers into the field. Price control by the States, not supported by a uniform export policy on the part of the Commonwealth, together with the substantial fall in overseas prices and ever increasing production costs are of serious concern to those companies on which the whole burden of supplying the Australian market has been placed for many years past.

We trust that when the control of the price of zinc reverts to world markets, untrammelled by Government purchases and pools and controls, it will no longer be thought necessary to fix prices in Australia. It is hoped when that day arrives it will be found possible to apply the conditions under which we operated in the past and to enter into long-term contracts for the purchase of zinc concentrate from the mines, a method which was quite unpractical so long as differential prices between locally consumed and export metal existed.

Our exportable surplus is committed to the British Government up to the end of December this year, the price being based on the ruling U.S.A. price.

Sales of our zinc through the London Metal Exchange will entail sales being made on a c.i.f. instead of the f.o.b. basis which applies at present under our arrangement with the British Government. This will entail a delay of some months in the receipt of proceeds, and will automatically involve an increase in our working capital requirements. However, no difficulty is anticipated in provision of the necessary amount, and to the extent that the company's own funds may not be sufficient normal bank accommodation should be available.

Sulphur Utilisation and Sulphate of Ammonia.

The story of the economic utilisation of the sulphur content of zinc concentrate is set out at length in the directors' report so that stockholders may appreciate the why and wherefore of our interest in the manufacture of sulphuric acid, superphosphate, and in sulphate of ammonia. The booklet issued with the annual report illustrating the process of manufacture of sulphate of ammonia will be of interest to our stockholders and give them a justifiable pride in this new development by their company.

It is understood that a project for the manufacture of sulphate of ammonia in Queensland is being considered by other parties, in conjunction with the Queensland Government. While such a project would be located much nearer than our plant to the main consuming centres, it would be a comparatively high-cost producer, relying on coal and sulphuric acid of pyritic origin. The capital cost also would be very much higher, as, apart from the power generating plant, roasting and acid-making capacity—which at Risdon are part of the zinc

ELECTROLYTIC ZINC CO. OF AUSTRALASIA LTD. (Contd.)—plant—would have to be provided. If the State desire to be self-contained should cause the Queensland project to be proceeded with, irrespective of economic considerations, the total output of sulphate of ammonia would exceed Australian present consumption. We would not, however, fear competition from the Queensland source under free marketing conditions. It is to be noted our plant is so designed that its output can be materially expanded at relatively low cost.

The Outlook.

While the immediate outlook for metals is not very optimistic, the long-range view, on high authority, is that world demand for lead is likely to exceed production, and in the case of zinc that the supply, under normal conditions, should just about meet the increased demand arising from expanding industrial growth. The development and use of substitutes may affect this prediction, but the general feeling seems to be that new sources of zinc supply will balance the depletion of existing sources. The recent high prices enabled some marginal deposits to be opened up and profitably treated; these may be forced to cease operations if prices continue to fall, but may constitute useful reserves for future exploitation. Another era of very low prices such as that of the "thirties" is most unlikely, but it seems inescapable that there will be some shaking down of metal prices over the next few months until supply and demand come more nearly into balance.

World-wide Government controls of consumption, prices and exports, the subsidising of some high-cost producers and Government stock-piling, have all had unsettling effects on metal prices, and the fact that some feeling of uncertainty exists in the markets at the present time is quite understandable. However, it is refreshing to observe signs of relaxation of controls and restrictions and of a return to normal trading conditions.

Expansion.

While the heavy fall in metal prices will naturally decrease profits for the current year, it is expected that thereafter the large expansion programme, which will be nearing completion towards the end of December, 1953, should begin to take effect and have a beneficial effect on the company's profit earning capacity.

It is mentioned in the director's report and in the supplementary reports of the general superintendent at Risdon, Mr. Kirby, and the superintendent at Rosebery, Mr. Burns, that expansion is taking place at four points:

1. Increase of mining and milling operations at Rosebery.
2. Expansion of the capacity of the zinc works at Risdon.
3. The plant for recovering zinc metal from residue.
4. The sulphate of ammonia plant.

It is expected that the influence of the first three will be felt during the course of 1953 and towards the end of the year, provided there is no diminution of power supply, all these should be in production and contributing to the company's revenue.

Granted sufficient power, the sulphate of ammonia plant should be producing towards the end of 1954.

On either a long-range or short-term view, the company is well placed and occupies an advantageous position as a producer of zinc and lead concentrates, zinc metal, sulphuric acid and fertilisers. We therefore face the future, whatever it may hold, with full confidence.

Industrial Relations.

I would like to place on record the directors' appreciation of the fact that industrial relations at both Risdon and Rosebery have been harmonious throughout the year, maintaining an almost unbroken record since the formation of the company.

In conclusion, I would like to pay a tribute for work well done to all the members of the staff and to the contented body of workmen who carry out the daily operations under their supervision. I am glad to say that under the arrangements made, they, too, share in the prosperity of the company.

Westeels Industries Ltd.

Manufacturers, Distributors of Specialised Engineers' Tools, Steels and Instruments.

Reg. Office: 513-519 Wattle St., Ultimo, N.S.W. **Directors:** E. J. Hazell (Chairman), A. R. Booth (Manag. Director), S. A. Smith, R. L. Booth, W. I. Potter. **Auditors:** McGrath, Nissen & Jacombs.

17th Year ended June 30, 1952. Meeting November 6, 1952.

A conservative dividend policy is expressed in the payment of an unchanged dividend of 9%, as earnings on ordinary capital rose to 20.2%.

*In 1950, include £56,314 revaln. of freeholds and £37,500 share premiums, from which a bonus issue of £90,000 was made.
†Adjusted for £995 taxn. overprovided.

Stocks increased by about £102,000 due to increased activities, while freeholds, etc., rose by £36,500 on account of the purchase of an additional property. The new property has an area exceeding the main Elizabeth Street premises, and is situated within half a mile of that location. Total liabilities, however, increased by only £87,000 because of the large amount of profits ploughed back.

The company owns an old-established distributing business handling automotive parts, accessories, etc., bearings for industry; domestic electrical equipment (including radios, refrigerators, washing machines, vacuum cleaners), hand tools and paints. A number of valuable franchises are held, including G.M.H., Ford and International spare parts.

"Turnover for the period under review shows a considerable increase on the previous year and constitutes a record for the company," stated the Chairman, Mr. E. A. Machin, in his annual address to shareholders. His address continues:

The increase in turnover was shared by all departments and branches. Portion of the extra gross profit was offset by heavier merchandising expenses. It has again been found necessary to carry heavier stocks in order to sustain the increased trading activities of the company, but the stock position is under constant review.

During the year the company acquired another freehold property with an area exceeding that of our main premises. This property is situated within half a mile of our Head Office, and should prove to be an asset of great value in providing a much-wanted space for expansion of the company's activities.

Trading Results.

The net profit before taxation for the year was £244,080.

The provision for taxation in respect of the profits under review amounts to £109,300.

After providing for dividend of 20% on all issued shares in the company requiring £63,000, an amount of £71,780, together with £24,220 from Profit and Loss Appropriation Account, making a total of £96,000, was transferred to General Reserve Account and the balance of Profit and Loss Appropriation Account to be carried forward to next year is £2,306 as against £23,625 brought in, so I think you will agree that the result is again very satisfactory.

I believe that our future prospects are bright, and I confidently look forward to a satisfactory outcome of the current year's activities.

Courtaulds (Australia) Limited

Rayon Manufacturers and Processors.

Reg. Office: 203 Clarence St., Sydney, N.S.W. **Directors:** R. J. Vicars (Chairman), J. M. Baillieu, Col. F. T. Davies, G. H. Grimwade, Dr. R. W. Harman, S. Hordern, J. T. McKee, F. Williams. **Auditors:** Flack & Flack; Binder, Hamlyn & Co.

3rd Year ended June 30, 1952. Meeting October 9, 1952.

Construction of factory at Tomago (near Newcastle) is proceeding, although costs are above the original estimate.

Processing of imported viscose yarn for tyre fabric has commenced, and the quality of output has been good. The outlook for rayon products is considered sound.

A Melbourne sales office will handle high-speed knitting and warping machinery for F.N.F. Limited, England, in addition to the company's own products.

The debit balance of £53,682 in operations for the year (£39,392 last year) has again been transferred to Establishment Account.

Details of the company's formation in Australia were given in the April, 1952, "Record," page 210.

At the Annual Meeting on November 3, the Chairman, Mr. F. G. L. Harding, delivers the following address:

Trading Conditions.

In my last Address to Shareholders at the Annual Meeting held on the 2nd November, 1951, I referred to the effects of inflation and monetary control policy on business in general, and your company's business in particular, and stated that your Directors had, of necessity, recourse to a curtailment of trading operations in order to conform to Central Bank finance policy requirements.

The inflationary spiral continued its upward course throughout the financial year just ended. Cost of living adjustments increased the wage rate by £2 per week and so the cost of most goods purchased and of all services rendered by the company rose accordingly. The company maintained a financial balance on its current position by restricting trade in certain quarters and by a close control over the working capital used in stock and book debts and expenditure on fixed or capital assets. Any additional increase in costs will involve further curtailment of the company's activities. Such a policy necessarily results in the loss of gross profit and with a view to minimising any loss of net profit, close control is, and will continue to be, kept on expense and operating budgets.

Increased production is being advocated from many quarters, apparently regardless that additional working capital is required to finance it and of the buying ability of the community to absorb it. It would be more to the point if the pleas were for cheaper production. Manufacturers and traders will not, nor could they be expected to, take a risk of financial embarrassment by increasing production while costs continue to rise and buyer resistance to higher prices is in evidence. In general, it is reasonably certain that the supply today is equal to the demand. Therefore the price factor has become all important if increased production is to be readily absorbed in the community.

Taxation.

Taxation is proving a bar to lower prices. The tax gathere is taking at least 50% of the earnings of public companies an something greater in many cases of the earnings of priva companies.

Strangely enough, your company is classified as a priva company for tax purposes and the tax gatherer, under existin legislation, makes three tax imposts on the earnings of th company—

(1) Primary Tax of approximately 7/- in the £1.
(2) Undistributed profits liable to a secondary tax at 10/- the £1.
(3) On dividend distribution to shareholders at an avera rate of 4/6 in the £1.

It is calculated that the profits of your company, excludin its dividends from subsidiary companies, will be cut up as follow

Tax Gatherer	54%
Shareholders	29%
Company, for development and expansion	17%

The effect of taxation on companies as levied today is—

(1) To render it impracticable for companies to plough ba sufficient profits to finance normal development a expansion.
(2) To encourage an extravagant dividend distribution poli in direct contravention of the declared policy of t Government to halt inflation.
(3) There is no incentive for the public to invest in industr concerns to obtain income as distinct from capital profi
(4) The combination of these effects is that business, finance inflationary trends, is forced into the mon market in competition with the Government for financial requirements.

It is quite illogical that a company such as ours should be subject to the iniquitous Undistributed Profits Tax of 10/- in the £1.

This year your company has been able to escape the impost of Undistributed Profits Tax by the expedient of paying a dividend on preference and ordinary capital, in respect to the six months ending 31st December, 1952, in December, 1952, instead of the following March or April, as has been the practice in former years.

This saving will not be possible in future years unless the suggestion of the Federal Treasurer to increase distributions to shareholders is acted upon. In future years, however, your company, in order to escape assessment of Undistributed Profits Tax would require, on the basis of last year's earnings, to increase the ordinary dividend from 6% to 11¼%. In that event the actual net cash outgo from the company's point of view would only be about £7,700 as compared with £15,400 required to pay such additional dividend. In other words, the Government would, by loss of the collection of Undistributed Profits Tax, pay half the increased dividend.

In addition to income tax, the company was called upon to pay £12,690 in Pay Roll Tax and to bear the whole cost of acting as agent for the Government in the collection of Sales Tax, the cost of which is very great in a business such as ours which handles between 7,000 and 8,000 lines and approximately 40% to 50% of items invoiced are subject to sales tax.

The net profit earned for the year was £74,146, a reduction of £1,798 on last year's profit of £75,944.

The effect of the year's operations on the company's current and general financial position is set out hereunder.

Nett profit earnings after tax	£74,146
Appropriated in the payment of Dividends	62,919
Leaving a balance of nett profit retained in the business of	£11,227

Unsecured Note Issue.

In my last address I stated that it was the intention of your Board to seek an increase in the secured borrowing powers permitted the company in accordance with the provisions of the Trust Deed governing the issue of Unsecured Notes. These negotiations have been protracted but are still proceeding.

Fisherman's Bend.

The volume of the company's business has rendered it imperative to obtain larger and more convenient premises from which to operate its Melbourne business. The building project at Fisherman's Bend is therefore a **"must"**. Work on that building will be proceeded with when negotiations with the Note Holders have been satisfactorily concluded.

Mechanised Accounting.

The conversion of the company's Head Office accounting to automatic mechanical operations has been completed and we are now enjoying the benefits of the conversion. Statements of account to our customers are being rendered early in the month with the result that the investment in book debts has been considerably reduced, thus providing much needed additional working capital for trading purposes.

New Plant.

Some important plant installations have been carried out for a subsidiary company during the past year, which will materially increase production and profits to our company.

General Manager's Trip Overseas.

The General Manager's trip overseas proved beneficial. Contacts with overseas Principals by top level management is essential. Much good was achieved in consolidating relations with Principals and at the same time observing the latest methods and trends.

Staff Provident Fund.

It is recommended that a further appropriation of £2,500 be made to the Staff Retiring Provident Fund, which will bring it to a total of £11,530. During the year seven employees, who retired after periods of service with the company ranging from 27 to 54 years, participated in the benefits of the Fund, as well as a number of necessitous cases.

Staff Superannuation Fund.

The number of employees of your company and its subsidiaries, who are members of the Staff Superannuation Fund, total 277, being an increase of 26 during the year. The Company's contribution for the past year totals £4,237 and the average cover at maturity is £950 per member.

Conversion of Preference Shares and Notes.

During the year, 2,114 "B" Preference Shares were converted to "A" Preference Shares in conformity with the Company's Articles of Association; and £150 face value of Unsecured Notes were converted into 150 Ordinary Shares of £1 each fully paid in accordance with the provisions of the Unsecured Note Issue.

Death of W. W. Berry.

It is with regret that I refer to the death of Walter Wimble Berry. Mr. Berry had given valuable service to the company for over 50 years and had only retired from that service a few months prior to his death.

Staff.

In an old established business such as your company, there are many employees who have arrived at or towards the end of their effective years of life and consequently this has, and will, continue to involve some changes in near top level management and executive positions. Gradually the organisation is being strengthened by the training of understudies in key and specialised positions. The Board records its appreciation of the loyal and efficient service rendered by the Company's Management, Executives and personnel generally.

Gadsden-Hughes Ltd.

Reg. Office: 59-75 Queens Rd., Five Dock, N.S.W. **Directors:** W. G. Forsyth (Chairman), S. W. Gadsden, N. C. Gadsden, E. H. Dunnett, R. E. Hughes, C. H. Clarkson, H. S. English. **Auditors:** Barraclough, Fitts & Co.

1st Year ended June 30, 1952. Meeting October 22, 1952.

Following the incorporation of the company on November 19, 1951, the first accounts covering the operations of the subsidiaries for the year ended June 30, 1952, show a profit of £106,231, 20% higher than earnings for the previous term, as published in the Memorandum of Sale.

Profits were 9.7% on capital, compared with an average of 6.7% for the previous seven years. Dividend was 7% tax free.

The Annual Director's Report presented to shareholders at the Annual Meeting on October 7 contained the following statement:

Your directors are pleased to report that trading since June 30, 1952, has been well maintained notwithstanding the Import restrictions imposed by the Government.

Certain projects for the extension and improvement of the company's premises and for the expansion of the business have been considered by your directors, and in order to provide finance therefor, the company applied to the Capital Issues Board for permission to raise additional Capital. The directors regret to advise that so far this application has not been successful.

They have therefore decided to recommend to shareholders that a moderate dividend only should be paid out of this year's profits and to utilise the balance of such profits towards financing the proposed projects.

Adequate contributions have again been made to the Staff Provident and Superannuation Funds and the Board records its appreciation of the loyal and efficient service rendered by the employees during the year.

Hoffman Brick and Potteries Ltd.

Reg. Office: Dawson St., Brunswick, Vic. **'Phone:** FW 1181. **Directors:** F. M. Syme (Chairman), C. J. King (Manag. Director), H. M. McBean. **Auditors:** Wilson, Bishop & Henderson.
68th Year ended September 30, 1952. Meeting November 27, 1952.

Sales of the company's products, comprising drain pipes, household and sanitary ware and roofing tiles, increased substantially over the previous year, and profit after tax was £16,586 (up 17%). Dividend was maintained at 7½%.

"The burden of ever-increasing labour costs and onerous taxa-n in its various forms are each causing the Board great con-rn," said the Chairman, Mr. Clifford Minter, in addressing share-lders at the Annual Meeting on November 28. Mr. Minter's dress reads:—

The net profit of Hoyts Theatres Limited for the year, after oviding £42,756 for depreciation and £73,052 for taxation, amounts £164,388 as compared with £163,876 in the previous year.

The surplus for the year, after providing for the payment of idends on all preference shares has been transferred to Reserve. The Consolidated Profit and Loss Account for the company and subsidiaries shows a profit of £253,088 compared with £250,385 the previous twelve months.

Mr. Spyros P. Skouras

We have recently been favoured by a visit to Australia by Mr. yros P. Skouras, the President of 20th Century Fox Film Cor-ration. Mr. Skouras made an extensive survey of the company's eatres and expressed himself as being very favourably impressed th the circuit. Your Directors were delighted to meet and con- with Mr. Skouras because of the assistance and advice which h Century Fox Film Corporation, and Mr. Skouras in particular, ve always extended to our company.

Theatre Properties

During the year under review, necessary work was carried out continuation of the company's policy of keeping its theatres d contents in good order and condition. Your Directors consider at in addition to having high-grade films for exhibition, modern, comfortable and clean theatres are necessary in order to attract patrons and to maintain the company's trading position.

Rising Costs

The burden of ever-increasing labour costs and onerous taxation in its various forms are each causing the Board great concern.

Film Supplies

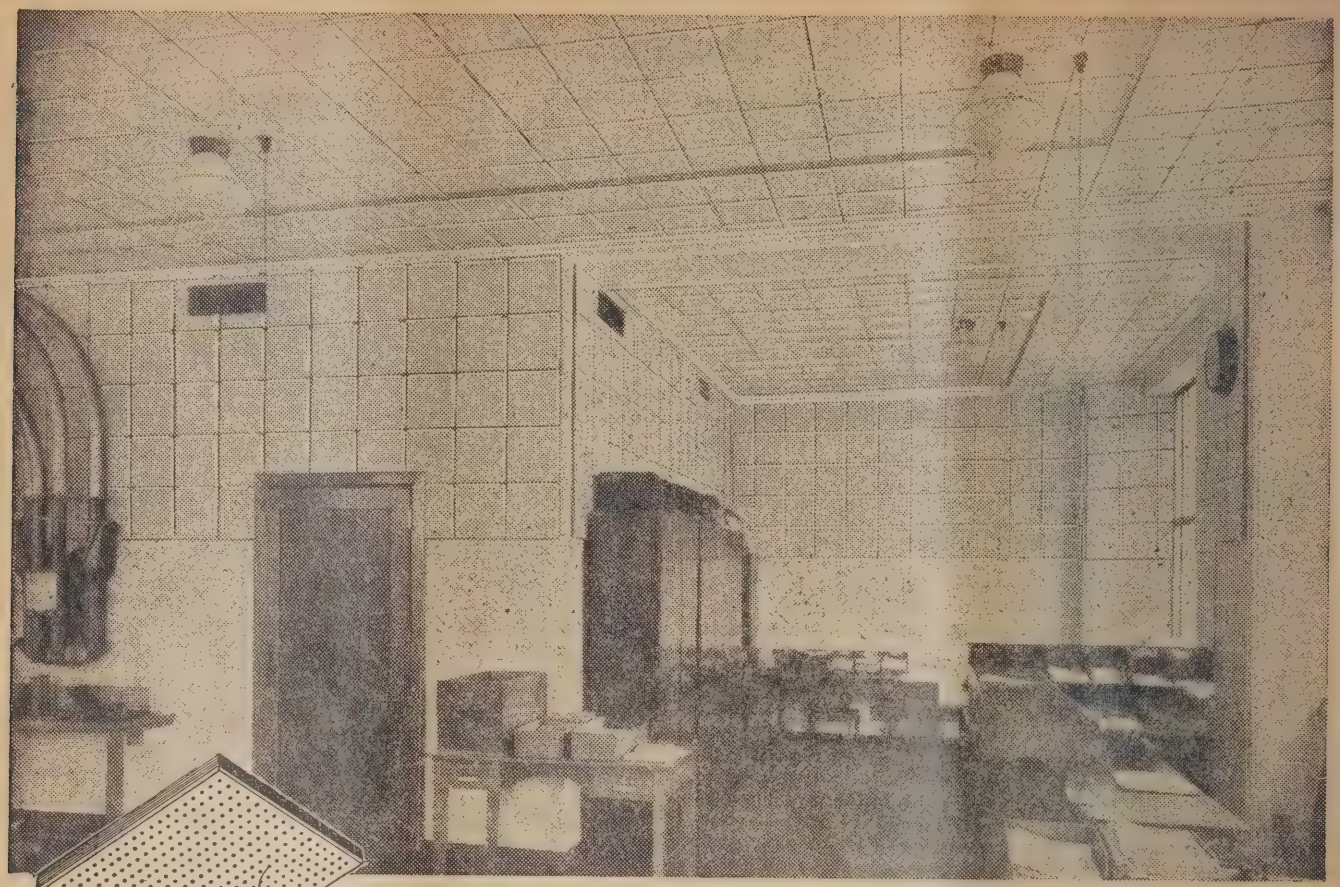
During the past year a sufficient number of films were available to maintain the business of the company and it is anticipated that existing contracts will enable us to provide an adequate supply to service the theatres in the current financial year. We are extremely fortunate in having the continued support of 20th Century Fox Film Corporation from whom we receive in each year a large number of high-grade films. Other principal suppliers are R.K.O. Radio Pictures, Warner Bros. First National, United Artists, and London Films, all of whom deliver their proportion of first-class films. Supplies are also available from other film distributors for screening in our theatres outside the capital cities.

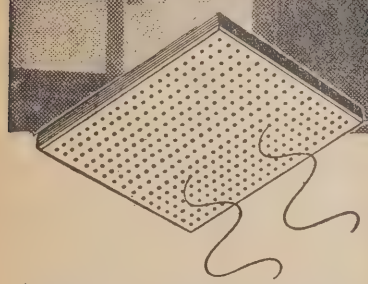
Confectionery Vending

This branch of our business has been further extended during the year and now forms an important factor in the operations of the company. We contemplate further expansion in this direction.

Staff

Your Directors again desire to thank all the executive officers and staff in the offices and theatres for their co-operation and faithful service during the past year.





484 traps in each 12" square tile reduces noise by 65%.

Rural Bank (Sydney) installed noise-absorbing Cane-ite Acousti-Tiles in their Billing Department without any interruption of office routine

Cane-ite Acousti-Tile are as easily installed over existing ceilings as in new construction. When noise has been excessive they are often continued part-way down the wall as seen in this photograph of one of the offices in the Rural Bank which now enjoy Acousti-Tile quiet.

You will find Cane-ite Acousti-Tile in many other banks and Government offices, churches, clubs, broadcasting stations, hotel bars and telephone booths throughout Australia.

As sound waves hit the tiles they are absorbed by the 484 noise traps in each tile—they dissipate instantly.

QUICKLY INSTALLED — NO INTERRUPTION OF BUSINESS!

Turnover was a record, and the work on hand was approxiately the same as a year earlier. The company has not been eriously affected by the curtailment of public works prorammes.

Expansion is proceeding at Sandringham structural shop, s shown by the increase of £47,768 (up to 60%) in plant and achinery.

Although imported steel is still being used, local supplies re improving and the labour position is better.

Net tangible asset backing (book values in consolidated alance-sheet)—£1/9/9.

In addressing shareholders at the Annual Meeting held on ugust 19, the Chairman, Mr. F. Peter Johns, reported that at the resent time there appears to be a substantial volume of work in rospect. His address reads:

Profit for the year, £113,390, compares with the profit last year, 00,922, and exceeds the results of any other year in the company's istory.

Our turnover during the year has also been greater than in ny previous year.

Distribution of Profits.

After making allowance for the interim dividend paid in Febuary, and taking into account the amount of £15,089 brought forard from last year, the amount available for distribution is 99,069.

Your Directors recommend the payment of a dividend of 7% or the half-year ended 30/6/52, making a total of 12% for the hole year. This is the same rate of dividend as was paid last ear, but as you are aware, the capital has since been increased. t is further recommended that £45,000 be transferred to reserve, eaving £12,895 to be carried forward. Last year £35,000 was added o reserve from the year's profit and about £15,000 brought forward.

You will have noticed that our subsidiary companies are now laying a more important part in our activities, and each of these ompanies is operating on a profitable basis.

Current Trading.

Turning now to the year we have just commenced, our work n hand is approximately the same as it was 12 months ago, and here appears at the present time to be a substantial volume of ork in prospect. So far, we have not been seriously affected by he curtailment of public works; however, there are indications that he State Electricity Commission may require us to slow down on heir contracts to a level that will be within the Commission's bility to meet its commitments.

New Buildings.

Reference was made last year to our new Structural Shop at andringham, and I am glad that I can report to you that good rogress is being made in the expansion of our activities in this rea.

In the past 12 months a large extension to these works has een completed, and it has been in operation for some months. The ffice and Amenities Building has also been completed. A further xtension that will double the existing floor area is nearing comletion, plant will be installed within the next few months and roduction will commence in this section at the end of the year. urther large extensions are planned to follow, and it is likely hat most of our structural work will eventually be carried out here. We will have there a layout that is expected to result in n appreciable saving in handling costs. We will have ample working area and space for further extensions to this important section of our business.

You will realise that the activities to which I have just referred are greatly increasing the capacity of our Structural Department, an increase that the Board feels is fully justified to meet an increased demand.

Substantial additions have been made to our plant during the year and further items will come into service in the near future.

Steel and Labour Supplies.

The limiting factors in our output have been the supply of steel and a shortage of skilled tradesmen.

Steel supplies have shown some improvement—although it is still necessary to use a considerable quantity of imported sections and plates—and the number of skilled tradesmen available has increased.

With further improvement and particularly the greater availability of Australian steel, it should no longer be necessary for public bodies and others to import fabricated steelwork from overseas at very high prices to meet the needs of the development of this State.

Lift and Mechanical Departments.

As further sections of the Structural Shop are moved from South Melbourne, much needed space will be made available for the operations of our Lift and Mechanical Departments. These Departments have been fully engaged on the manufacture and servicing of lifts and the building of travelling cranes.

Sale of Buildings.

With the approaching transfer to Sandringham within the next few months of the operations now carried out in the buildings in Haig Street, South Melbourne, your Directors have concluded arrangements for the sale of these buildings at a figure that they regard as satisfactory, and vacant possession will be given at the end of this year.

A substantial payment already received has been credited to Land and Buildings in the Balance Sheet and offsets to a large extent the amount spent under this item elsewhere.

Appreciation.

It is with a sense of very real appreciation that I would like to speak of the work of the staff during the past year.

In the first instance, I would like to refer particularly to the senior members of the staff.

The financial results that have been achieved and the programme of expansion to which I have referred at some length, would not be possible without the ability, the enthusiasm and the continued effort of these men, but to our staff as a whole, I would like, on behalf of the Board, to say "thank you" for their loyal co-operation and help throughout the year.

Peninsula Bus Lines Ltd.

Reg. Office: Young Street, Frankston. **Directors:** E. M. Hall (Chairman), B. J. Hall, R. A. Scott, I. R. Evans, G. G. Austin. **Auditors:** G. W. Cox & Gullick.

Year ended June 30, 1952. Meeting November 14, 1952.

Dividend was reduced from 7% to 5%, strengthening the cash position by £3,000. Net profit was £802 lower at £10,358, despite increased revenue.

"An application for a further 12½% fares increase has been made to the Transport Regulation Board and is at present under consideration," stated the Chairman, Mr. E. M. Hall, at the Annual Meeting on November 14. His address reads:—

The year ending June, 1952, has been one of extreme difficulty for most types of industry and business owing to greatly increased costs which have made a marked impression on all types of operations.

The passenger transport industry has not escaped this influence and the result in some cases in this industry and other enterprises has been that dividends have been passed altogether or have been substantially reduced.

I am happy to say, however, that in the circumstances this company has done comparatively well, although increased costs have certainly made a deep impression as the figures show.

Accounts.

You will have seen from the Directors' Report, revenue has risen from £86,223 to £91,233 and expenses from £69,805 to £75,875. That is £5,010 more revenue but £6,070 more expenses, a net reduction of £1,060.

It has been thought prudent in the circumstances to strengthen the company's financial position by reducing the dividend from 7% to 5%. This strengthens the cash position by £3,000. In this balance sheet there is a surplus of current assets over current liabilities of £484, whereas last year the current liabilities were the larger by £7,051. Whilst a reduction of dividend is never popular, I am sure shareholders will agree that it is prudent and is sound financial management in the circumstances.

Fares Increases.

The obvious expedient of raising fares to offset rising costs has been employed as it has become necessary from time to time, and an application for a further 12½% rise has been made to the Transport Regulation Board and is at present under consideration.

Economies.

The executives of the company have concentrated on the saving of expense and have had the active co-operation of the staff in their efforts to this end. As this business is a public utility subject to control and public opinion, the extent to which expenses can be reduced is somewhat restricted, for example, the withdrawal of unprofitable services usually excited spirited protest from the public and in consequence obvious economies of this sort are not always possible. Another inescapable factor which contributes to high expense is the need for a very high standard of maintenance required to consistently maintain time-tables and to ensure the greatest degree of safety which, of course, is of first importance.

Considerable savings have been effected, however, by close attention to the rostering of men, elimination of vehicle dead running and other details of management which contribute to the streamlining of the organisation.

Transport Board.

I am happy to state that our relations with the Transport Regulation Board and its officers are very happy indeed and we must acknowledge their competent appreciation of the many problems we have placed before them.

Future.

I am confident that in Peninsula Bus Lines Limited we have a business and an organisation capable of a long and prosperous life always provided that the national economy achieves a reasonable stability against which we can plan with some degree of confidence and certainty.

Before you go abroad . . .

take this wise precaution

ENSURE complete enjoyment and absence of worry by placing the control of your affairs in the hands of a skilled and trusted Attorney or Agent. The Union Trustee Company is fully equipped to act in this capacity. Its services include the collection of all classes of income and attention to all kinds of business and personal matters. It also prepares taxation returns and arranges and supervises the investment of funds.

Be sure, too, that your Will is in order.

Write, without cost or obligation, for the Company's booklet which explains fully these and other services available. Or call for a confidential interview with one of the Company's senior officers.

Touching 18 m.p.h.

THE NEWSPAPERS AND MAGAZINES which bring pleasure to leisure owe a great deal to the keen eye of Henry Nosworthy.* For it is his skill and constant watch on the virgin paper rolling through the machines at 18 m.p.h. at Bowater's Canadian Corner Brook Mills that detect flaws which, unobserved, could cause hours of delay during the printing run.

One of a well-practised team which ensures that newsprint comes speeding off the six paper-making machines at Corner Brook in a continuous flow day and night, Nosworthy comes of a line of Cornish fishermen who settled in Newfoundland four centuries ago. His specialised skill is not hereditary but the machine has not yet been invented which can replace it. Only a lifetime of experience can ensure the correct and uniform tension of the thin, wide sheet as it winds swiftly onto the roll. Every twenty minutes a blast of compressed air rips the racing belt of paper across, simultaneously wrapping the loose end round the spindle of a fresh roll. For the space of a split second the white hypnotic flow is interrupted and then continues as before. In the past twenty years astronomical miles of paper have passed smoothly beneath the sensitive hand and shrewd eye of Henry Nosworthy.

The whole wealth of Bowaters craftsmanship, experience and research in the art of making paper—the 'know-how' in short—is freely at your service.

51st Year ended September 30, 1952. Meeting December 5, 1952.

With more revenue, it has been possible substantially to increase the reading content of both the "Herald" and the "Sun." "Herald" circulation has risen to 412,000, the largest daily circulation in Australia, while the "Sun" now has a circulation of 405,000.

Profit, £241,827, is up £8,693, and ordinary dividend is 14.1%, unchanged.

†Excl. £179,285 provn. for develop. and deferred expend.

Newsprint prices rose during the period, but fell slightly at the end. Production of Tasmanian newsprint has been restricted by lack of electric power. Advertising space became more freely available during the year.

The price of the "Sun" was increased to 4d. in July, along with other morning dailies.

Record revenues were received by radio stations 3DB-3LK, but increased expenses caused profit to fall slightly.

Colorgravure Publications, the book publishing division, had a record turnover and profit was satisfactory.

Net tangible asset backing (book values)—£23/18/8 for 6½% "A" preference; £10/8/6 for 6% "B" preference; 9/- for 5/- ordinaries.

"Of each 100 metropolitan morning paper sales made in Victoria each day, 60 go to "The Sun,'" stated the Chairman, Mr. H. D. Giddy, at the Annual Meeting on December 5. His address reads:

All of us present at this meeting of our company are conscious of the absence of Sir Keith Murdoch, who presided over the annual meetings for many years. He had such a keen desire to meet you shareholders, and had such an appreciation of your interests that to talk to you and give you a detailed record of the year's doings was one of his real pleasures.

The tributes paid to him throughout the English speaking world have given a true assessment of his standing—a great Australian, a great journalist and a great man.

Some of you may remember the concluding paragraph of the leading article that was written in the first Herald published after Sir Keith Murdoch's death. It said:

"A high standard of work has been set for us by Sir Keith Murdoch. We hope, in duty and modesty, that we shall not let that standard be diminished."

I could do no better than quote that to you, as our guide post for the future.

Daily Newspapers.

In a company such as ours, the first emphasis must always be on the progress and standing of our newspapers with the public. It is my pleasure to be able to report to you that the past year has seen a further advance in the place which our daily newspapers occupy in this city and in this State. With the addition of more revenue, which I will deal with at a later stage in my remarks, we have been able substantially to increase the reading content in both The Herald and The Sun News-Pictorial. This has enabled us to deal more adequately and more authoritatively with the great mass of world and Australian news and information which it is our function to convey to our readers. Our sources of news, both in Australia and overseas, have been substantially strengthened, and there has been an unceasing effort on the part of our editorial staffs to bring to the public a factual, uncoloured record of the news, backed by informed comment and sound interpretation.

Circulation.

Public appreciation of our newspapers is shown by the firm place they hold in the estimation of our readers. Despite some increased efforts by our competitors and an increased selling price of 4d., which took effect on July 29, our morning newspaper, The Sun News-Pictorial, still commands a daily sale of more than 405,000, which is by far the largest of any daily morning newspaper in Australia.

Of each 100 metropolitan morning paper sales made in Victoria each day, 60 go to The Sun. We feel we can be justly proud of the record of The Sun in a field of active competition. It sh that the qualities of brightness in news treatment and prese tion can be allied with essential soundness and authority.

The Herald has gone further ahead since we last reporte you. Its circulation of approximately 412,000 is the largest of daily newspaper—morning or evening—published in Australia. circulation as an evening paper is exceeded only in three or cities in the English-speaking world. The Herald's growth has built upon a long record of wide factual information to rea backed by a steady devotion to the community causes of the S and Commonwealth. It will continue to serve those purposes to full extent of our resources.

Newsprint.

It was forecast at our last annual meeting that during year that has just passed there would be a material rise in price of newsprint. That is one expectation that has been realised. Prices ruling during the year were the highest ever in the history of our company, reaching at one point an all- limit of £175 a ton. When I tell you that the average price r for newsprint landed in Australia just before the war was £17 a ton and that our company uses upwards of 26,000 tons a you will realise the extent of the burdens we have been c upon to bear.

Recently there has been some easing on the peak prices rea during the year, but two factors tend to limit the beneficial e on our economy. One is, that like all other papers in Australia are still carrying substantial stocks bought at high prices d the period of acute scarcity. The other is the operation of Fe import licensing, which limits the amount of tonnage we are to bring into the country. The newsprint buying group, about w you were told at previous meetings, has now ceased to operate, for the future we will make our own buying arrangements. still have to carefully control our supply position.

Unfortunately, I have to repeat the sorry story of the re tion of power for the Australian Newsprint Mills at Boyer, mania, a company in which we are deeply interested. We hav had power to operate the new big machine for more than spasm periods, and it does not look as though, under the most favou circumstances, we will be able to operate both our machines the second half of 1953.

The failure of the Tasmanian authorities to supply the p which they contracted to give us has cost the publishers of tralia some millions of pounds, by having forced them on sellers' market on the other side of the world, and, inciden by shortening the production, the price per ton of newsprint duced in Tasmania has been greatly increased.

Advertising.

After about two months of the financial year under review we were able to ease restrictions on the sizes of our newspapers. This enabled us to accommodate advertising which had been severely rationed for nearly 12 months. Thousands of additional columns of advertising, which had previously to find other outlets, poured back to The Herald and Sun.

To give you an indication of the standing of our papers, I may tell you that of every 100 columns of display advertising placed in Melbourne daily newspapers each week, about 70 columns go to The Herald and Sun. Display advertising, in the sense that I have used the term, includes all advertising of retail stores, amusement houses, nationally advertised products and business announcements. In short, it embraces all advertising except pure classified.

Despite all the increased costs we had to bear during the year, advertising rates in our daily newspapers have remained unaltered and of exceptional value. The Herald and Sun are not only the largest circulation evening and morning newspapers in Australia, but their advertising rates are amongst the lowest cost per reader of all metropolitan newspapers in Australia.

The Weekly Times, our soundly-established farmers' paper, made further good progress during the year in keeping with the prosperity of the farming community. This paper has now attained a sale of more than 90,000, which is the greatest in its long history. It has also gained substantially in advertising volume, now being regarded as easily the best weekly medium in Victoria, southern New South Wales and Tasmania, touching the wealth of our great primary industries.

Our two editions of The Sporting Globe, The Listener In and our monthlies, Home Beautiful, Aircraft and Wild Life and Outdoors have played a useful part in the operations of the Company during the year.

Further good work has gone into the building of our national woman's magazine, Woman's Day. The year just closed was a bad one for advertising volume for these magazines because many of the products normally advertised in their columns were affected by the suddenly-imposed import restrictions. The directors have in mind further plans for the substantial growth of Woman's Day. All costs covering its production were taken into our main accounts for the year.

3DB-LK.

Record revenues were received by 3DB-LK during the year, but greatly increased costs of operation, particularly in salaries, brought the net figure a little lower than last year.

Independent surveys showed that the overall popularity of the stations improved further during the year, maintaining their substantial lead over all other stations.

Music and drama produced and recorded under the stations' direction were sold throughout Australia, in British colonies, in New Zealand, South Africa and Canada, and some in the United States, a good revenue being received for these recordings.

Television.

Our Company has been preparing for a long time to equip itself to play a worthy part in the development of this great new means of education, information and entertainment.

We have great resources which we feel could be usefully applied in the building of television in Australia. Establishment of television, incidentally, will call for a very substantial outlay of money in the initial stages before there can be any commensurate revenue development.

Book Publishing Division—Colorgravure Publications.

This year's profits from this branch have been satisfactory, and turnover was a record. The number of book sales has increased from 800,000 units last year to a figure which now approaches 1½ million copies. Additionally, some 300,000 paper covered books were issued, bringing the total number produced to approximately 1¾ millions.

We are pioneers in this country of the mass production of books of a high standard of content and good quality. Most are the work of Australian writers and artists.

The aim of this service is to place in the hands of our readers good quality books at lower than normal prices, and there is abundant evidence that this service to the readers of our newspapers has met with much appreciation.

Production.

Production of all the publications from the House has been maintained at satisfactory levels despite some supply problems.

Recently, our General Production Manager, Mr. J. S. Wilkinson, paid a short visit to England, Europe and the United States, the main purpose of his visit being to see the testing of and to take over our latest press. It is expected that the installation of this new press will be commenced early in the new year, thus still further improving our productive efficiency.

Our Hawthorn building is nearing completion and, in fact, some parts of the building are already in use for storage purposes.

Profit Results.

It is proper that I should refer you particularly to the pages in your report headed "Statistical Record B."

The tabulations carry over a period of 10 years, 1943 to 1952. Revenue rose over that period from £1,573,109 in 1943 to £6,476,004 in 1952.

The shareholders' share of the revenue (including what was put away for reserves) was 11.4 per cent. in 1943 and had reduced to 3.7 per cent. of the revenue in 1952.

I think it proper to end by telling you that your directors feel that the character and integrity of our newspapers, which are our greatest assets, have been established at a very high level, and that there will be constant and unremitting endeavour to maintain that standard in everything that goes into good newspaper production.

Noske Industries Limited

Holding Company in Flour Millers and Motor Vehicle Distributors.

*Incl. tax pd. (1951, £20,833; 1950, £7,500).
†Adjusted for £20,000 taxn. overprovided.

Originating as a flour milling business some fifty years ago, the organisation today depends for earnings to a large extent upon its engineering division, which handles the distribution of industrial vehicles, tractors, diesel engines and other industrial, agricultural and materials handling machinery. Another valuable interest is a metropolitan distributing agency for the "Holden" car and truck.

Because of restrictions in loan moneys, orders from semi-Governmental bodies decreased, but other ready markets are being found.

In the flour milling division, production was a record and prospects are good.

Noske Industries Limited

"There was a ready market overseas for all flour that could be produced, consequently stocks were cleared very quickly," stated the Chairman, Sir Edwin Nixon, C.M.G., when addressing shareholders at the Annual Meeing on November 28. His address reads:—

The greater proportion of our profits is contributed by our engineering division. While the turnover for the year under review was slightly higher than that of the preceding year, trading conditions have been very difficult, for reasons largely beyond our control. You will be aware that early in 1952 it became obvious that a material reduction would have to be made in projects undertaken by semi-Government undertakings financed by Loan moneys. Consequently, several of these undertakings, with which we had contracts for the supply of earth-moving and road-making machinery were compelled to ask us to delay the delivery of plant which we had already procured, and in some cases to defer payment of amounts which they then owed. About the same time also credit restrictions compelled many of our customers to ask us to defer delivery of plant which they had contracted to take because they found it impossible to finance the payments. The long and wet winter also militated against deliveries to customers engaged in lumbering and saw milling.

Balance Sheet.

I mention these points because they have a direct bearing upon several items in our Balance Sheet. The first is the stock, which is higher by approximately £508,000. This increase is due very largely to the conditions which I have described. This additional stock had to be paid for and as we made no new capital issues during the year we had to rely to a much greater extent than we care to do upon our bankers and creditors. The aggregate increase in these liabilities was £451,000. None of these changes indicates deliberate over-trading; they were, in fact, the result of conditions I have described. I am pleased to say that since June 30, both stocks and liabilities have been reduced and I feel confident that by June 30 next, the position will be greatly improved.

You will note also a substantial reduction in amounts receivab under Hire Purchase Agreements. While the financing of hi purchase sales forms a profitable part of our activities, we fou it necessary, when we were compelled to finance a substantial i crease in stocks, to divert this business to other lenders. As o own finances become easier we shall resume it.

The net profits of the year, though less than last year, w I think, be regarded by you as satisfactory. Having regard to knov declines in the price of certain imported materials and uncertain in regard to other stock values, our engineering stocks have be conservatively though fairly valued.

In these uncertain times one hesitates to prophesy. Curta ment of certain of the activities of semi-Government undertakin may result in a reduction in the volume of business we have p viously done with them. However, other departments of our e gineering division are finding a ready market for their produc which we expect to continue.

Milling Section.

During the year under review the milling sections establish a record production, all four mills running full time throughout year. There was a ready market overseas for all flour that co be produced, consequently stocks were cleared very quickly.

The demand for mill feeds was also good, notwithstanding cellent seasonal conditions providing abundant natural feed.

A good harvest in Victoria and South Australia is now assu and the prospects of a continuance of the demand from overseas flour are good. These should enable us to continue to make full of our mill capacity.

Staff.

I am pleased to add that during the year 6 more employees co pleted 25 years of service, bringing the total number to 52, each whom has been presented with a gold Omega watch as a token the company's appreciation.

The Chairman, Mr. Thos. Swinburne, made the following remarks at the Annual Meeting of shareholders on October 8:

Before proceeding to address you on the activities and results achieved by the Company during the twelve months ended June 30, 1952, I would like to advise you that during the year the Company's secretary, Mr. Ernest J. Edwards, F.C.A. (Aust.), resigned from that office owing to the pressure of professional business. Mr. Edwards had been our secretary from the inception of the company in 1948, and your Board desires to publicly extend to him its appreciation of the services rendered by him during his period of office. Mr. Ian M. Nisbet, A.C.A. (Aust.), succeeded Mr. Edwards, and to him I wish to pass my thanks for his efficiency and co-operation since his appointment.

The Report of the Directors has advised you that during the year under review the company's shares were listed on The Stock Exchange of Melbourne, and the Directors desire to express their appreciation of your display of confidence in oversubscribing to the new issue of 30,000 shares of 10/- each in March last, this issue having brought the Paid-up Capital to £50,000. There has been insufficient time, however, for any benefits to be reflected in the company's accounts.

During the year your Managing Director, Mr. Nettl, visited Europe and England for the purpose of studying the latest developments in the production of paper containers abroad, and to secure regular and favourable sources of supply of imported paper. During his sojourn overseas, import licensing was imposed by the Federal Government, although its impact has not affected us, except to deprive us of the advantage of the low prices now ruling overseas. Ample supplies of paper are, however, readily available from local sources.

The company has indeed been fortunate in not being affected by the general trade recession until April last, and although the period since our financial year closed has not shown any impr ment in turnover, indications are that our sales will increas the year progresses.

Your Board's original plans for expansion have been some restricted by the prevailing economic conditions but will be plemented as and when opportunity arises.

Accounts.

I shall now pass on to the accounts themselves and com briefly on what I consider some of the special features.

Notwithstanding a drop in turnover during the three m ended June 30, sales for the year advanced by approximately whilst gross profit increased by a similar percentage from £1 in the previous year to £27,173 in the year under review, w expenses rose by only 34%.

Net profit of £17,952 earned for the year was more than d that of the previous year (£8,760), and after providing £7,79 taxation, an amount of £10,159 was carried forward to the A priation Account. With the amount of £1,674 brought forward last year there was a total of £11,833 available for distribu from this an interim dividend of £1,750 has already been pa

Your Board has recommended that a final dividend of 5 old shares and 3¾% on the March issue be paid, thus bringing dividends for the year to 10% and leaving a balance of £7,8 carry forward.

Fixed assets have increased by £51,208 during the year although current assets do not bear the same favourable rel ship to current liabilities as last year, certain steps have been by your Board to increase the working capital.

Your Board considers that adequate provision has been for tax, but joins with most other directorates in deplorin heavy rates of company tax as being excessive.

now in a complete
range of artistic colours
... and still the economical floor covering

Feltex has everything to recommend it—the look and "feel" of luxury, the right colour shades to go with your furnishings, and the economy of *extra width* and long wear. It takes only:

8½ yards of FELTEX to cover a room 12′ x 12′ • 11 yards of FELTEX to cover a room 16′ x 12′ • 16½ yards of FELTEX to cover a room 18′ x 16′.

Marbled Feltex is 72″ wide. Plain Feltex is 72″ and 54″ wide. Patterned Feltex is 54″ wide. Insist on genuine Feltex—a branded product with a reputation of 25 years behind it.

6th Year ended June 30, 1952. Meeting November 17, 1952.

A 50% increase in turnover was distributed over all phases of activity, and the ratio of profit to sales was well maintained. Sales for the first four months after balance date show a further 25% increase.

Profit percentage was more than maintained on increased capital, and ordinary dividend, unchanged at 12½%, absorbed £45,000 leaving £66,151 for reserves.

A new building at Braybrook is planned to be completed in mid-1953, and calls on the new shares will be deferred until needed for this purpose and payment for additional plant.

Operating through a group of subsidiaries, the organisation has a diversified range of production, including earth moving equipment manufactured under licence from several leading American principals, garage equipment and service tools, power take offs and oil hydraulic equipment.

The company also has an equal interest with the Harland Engineering Co. of Scotland in a company which now ranks as one of the leaders in the centrifugal pump field of Australia. This company raised a further £25,000 of capital after the close of the year.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 pref., £3/17/11; 10/- ord., 13/4, allowing for uncalled capital.

"Whilst all companies have sufficient orders in hand for a reasonable period ahead, we are not complacent about the position and we are actively building up our sales activities and adding to the range of products at present being manufactured," stated the Chairman, Mr. L. E. H. Reichstein, at the Annual Meeting on November 17. His address reads:—

Industry over the last twelve months has passed through a period during which there has been a considerable reduction in money available for capital expenditure. There has also been a general lack of confidence in the economic future for this country, which is regrettable insomuch as we all know the extensive amount of development required here and the prosperous future which is in store for Australia.

However, I am sure that you will be gratified at the result of the year's operations, which show an increase in sales over the previous year of over 50% and an increase in nett profit after tax from £87,282 to £120,390. You will also be interested to hear something of the current sales position and we are pleased to report that sales for the first four months of this financial year show an increase of over 25% compared with those for the same period last year.

Another factor of vital importance to-day is the question of employment and in this respect the number of employees in the organisation has increased by 15% over the last twelve months and we are hopeful of a still further increase in employee strength when the new factory is completed. Stocks have been maintained at a value consistent with production requirements. This factor has enabled us to meet obligations promptly and keep our bank overdraft at a nominal figure.

Buildings and Plant

In order to provide for the further development of our organisation, the erection of a new factory at Braybrook was planned over twelve months ago. The erection of this factory has been delayed by the difficulty in procurement of a building permit. However, due to the delay in the delivery of machine tools from overseas partly due to the introduction of import restrictions from England, it was felt that this factory could not be fully utilised until the middle of 1953 when it is hoped same will now come into operation. The delay in this development has meant that full utilisation of new capital could not be made immediately, resulting in deferment of the balance of the calls on the new shares.

During the year additional plant has been installed in all factories and the buildings of Grimwade Castings Pty. Ltd. have been extended. Building extensions are at present being carried out at Steelweld (N.S.W.) Pty. Ltd.

Future

Looking to the future, whilst all companies have sufficient orders in hand for a reasonable period ahead, we are not complacent about the position and we are actively building up our sales activities, developing new markets and adding to the range of products at present being manufactured, so as to ensure that we can fully utilise additional planned productive capacity.

The diversity in the products manufactured by us is an important factor in maintaining our sales level, insomuch as our equipment is supplied to almost every industry — primary and secondary.

Overseas Visit

The Chairman's recent visit overseas will result in additional manufacturing licences with overseas companies, details of which will be announced at a later date. The Chairman also spent some time investigating overseas export markets and we are pleased to say that our export business is showing an improvement and with the better delivery position we are hopeful of a considerable increase.

Staff

Your Directors view the future with confidence, and, before concluding these remarks, would like to pay a tribute to the co-operation and efforts of the staff and employees who contributed so much towards making 1952 successful.

Henderson's Industries Limited

Extracts from the Director's Annual Report read as follows:

Your directors have pleasure in presenting herewith the thirty-second annual report and statement of accounts of the company for the year ended June 30, 1952. The consolidated accounts include the operations of our wholly-owned subsidiary companies. Consolidated profit is £70,739 after providing £51,798 for income tax and £21,924 for depreciation.

The directors recommend a dividend at the rate of 10 per cent. on the paid-up capital of the company, one-half to be paid from Tax Paid Reserve.

Local seasonal conditions were the worst experienced for some years but improvements at the Bacchus Marsh condensery have satisfactorily offset these adverse conditions.

The year's expenditure upon Fixed Assets amounted to £89,521 as compared with £51,184 in 1951. Of the 1952 total £56,592 was expended upon land and buildings and £32,700 upon plant and equipment.

The company is fortunate in possesing a very fine building in Chester House, situated at 251 Latrobe Street, Melbourne, and the Registered Office will be moved to that address as soon as possible.

Capital Issues consent has been received for £200,000, and the directors are considering the methods to be adopted to raise this capital.

The Kauri Timber Company Ltd.

Reg. Office: 17 Queen St., Melb. **'Phone:** MU 7507. **Directors:** J. R. Bishop (Chairman), K. D. Macdougall, L. A. Sayers, H. J. Gibbs, J. H. G. Guest. **Auditors:** A. M. & J. Valantine; Holmes & McCrindle.

Year ended August 31, 1952. Meeting December 18, 1952.

Profit of £281,109 is lower than in the previous year, but higher than in 1950. Although earning rate on ordinary capital was 34%, dividend is unchanged at 8%.

*Credited with profit on sale or revaln. of fixed assets (1952, £3,844; 1951, £2,624), and debited with additional tax paid in respect of prior years (1952, £5,311; 1951, £8,822).

Since January, 1952, turnover has dropped, due to conditions in the building industry and the importation by the building trade of excessive quantities of baltic and other timber, leading to accumulation of stocks. With the reduction of imports the position is now improving.

Stocks rose by £2,062,000 (150%), and this was reflected in a rise in overdraft of £2,177,000.

In furtherance of its expansion policy throughout Australia, the company acquired the following businesses during the year by the issue of £315,000 in debentures.

F. H. Haines Pty. Ltd., Devonport, Tasmania, engaged in sawmilling and timber processing.

Cafpirco Ltd. and Case Products Ltd., Mt. Gambier, South Australia, engaged in pine growing and manufacture of cases.

Net tangible asset backing (book values in consolidated balance-sheet)—Pref., £3/10/10; ord., £1/13/11.

At the Annual Meeting held on December 18, the Chairman, Mr. J. R. Bishop, addressed shareholders as follows:

The past trading year has been a most difficult one and commerce in general and the timber industry in particular have been greatly affected by the changed financial situation that has operated since the beginning of 1952.

The timber, building and allied industries are generally the first to feel the impact of any change in the financial structure within the Commonwealth, and, owing to restrictions placed on credit and soaring prices due to ever-increasing costs, it was evident early in the year that sales would not be maintained at the high levels that were reached during the preceding year.

I am afraid that we cannot expect in the current year to maintain the profits which we have made in recent years.

The position was further aggravated by excessive importations of timber, especially from the Baltic and Southern European countries. Payments are made by sterling for timber from these countries, and import licences were not required for a substantial portion of the year under review. It was noted that importing companies, which do not usually import timber from these areas, were responsible for bringing in exceedingly large quantities. At the present rate of consumption it will be a considerable time before these surplus stocks can be absorbed. The industry is, however, well aware of the position, and imports during the last six months have been negligible.

You will be pleased to learn that further expansion has taken place in the organisation during the past financial year.

New Interests.

The Company has purchased all the issued shares in F. H. Haines Pty. Ltd., of Devonport, Tasmania. This old-established Company is actively engaged in sawmilling and the processing of timber for the retail trade in the North Coast. It also operates a large general Hardware Store at Devonport. The forestry freeholds owned by the company will ensure supplies of high-class hardwood for many years, and we are sure it will prove to be a very sound investment and a source of considerable income to the parent company.

During the year we also acquired controlling interests in Cafpirco Ltd. and Case Products Ltd. These two companies are located at Burnda near Mount Gambier, South Australia. The former company owns considerable freehold land planted with pinus radiata, and by re-afforestation is assured of a perpetual supply of pine. The timber harvested from these freeholds, together with quantities obtained from Government plantations, is sold to Case Products Ltd., which is a manufacturing company specialising in the manufacture of box shooks, particularly for the packing of export goods. With increased production, timber from the mills will be used within the organisation for such purposes as the manufacture of core stock for flush panel doors. Since the acquisition of these companies, the results have been quite satisfactory.

The acquisition of the before-mentioned companies necessitated further capital extension. It was, therefore, decided by your Directors to issue further debentures to the amount of £315,000, thus bringing the total debenture issue up to £715,000. The rate of interest and the redemption dates of the additional issue are the same as those applying to the original debenture, namely, interest at 4% per annum, and the date for redemption 1962/1967.

Balance Sheet.

In referring to the company's accounts for the year, you will notice that the general contraction of trading is reflected in the accounts and that the net profit is lower than that of the previous year, the amount being £138,873 compared with £141,149. Depreciation on fixed assets is lower by £56,812 owing to the cessation of the allowance for initial depreciation. Interest on debenture, charged to Profit and Loss Account, has increased by £7,728, due to the new issue of debentures as previously mentioned. This increase is from the date of issue up to the end of the financial year, and succeeding years will have to carry the full amount, an additional £4,872 per annum.

Income from Investments in subsidiary companies has increased by £12,730, representing additional dividends received.

Fixed Assets show a further increase for the year, the total of the increase being £104,821.

(1) **Freehold and leasehold properties** have increased by £53,778, due to cost of additional rights and leases over forestry lands in Western Australia and additional build-

ings at various places throughout the organisation. During the year the rebuilding of the plywood and box factory at South Melbourne was completed, and the company now possesses large modern factories for the manufacture of plywoods and boxes, including considerable quantities of butter boxes and cases of various descriptions.

(2) **Machinery, plant and equipment** has increased by £54,002. The policy of the Board is to acquire the most modern mechanical handling equipment, and during the year we installed in the South Melbourne yards the mechanical stacking and sorting machine which I informed you at our previous meeting we had just imported. This machine, which was imported from America, is now in operation, and we expect that it will successfully handle the bulk of timber entering our yards with considerable saving in costs. Further additions and improvements have been made to the company's sawmills, especially in Western Australia.

(3) **Ships** show a decrease of £2,959, due to normal depreciation. We were fortunate in having these vessels to freight our timber from Tasmania to the Mainland during those years when freight space was so difficult to obtain. Now that the position has eased considerably, we intend in the near future to dispose of one of the vessels.

Investments: Shares in subsidiary companies show an increase of £404,253, due to the acquisition of shares in the three companies upon which I have already commented.

Advances and accounts current with subsidiary companies have increased by £120,162 and are accounted for by the normal inter-company transfer of funds.

Current Assets: Stock in trade shows an increase of £670,874 over the previous year's figures. Although this increase is abnormal, we consider that, with the exception of one species of imported timber, of which the quantity we hold is comparatively small, our stocks will find a ready market as the general financial position improves. It is customary for the company to hold large stocks of Victorian Mountain Ash and Tasmanian Hardwoods for seasoning purposes before they can be marketed. During the year we received two large shipments of New Zealand Rimu, also shipments of logs from Vanikoro, and, as the company is the sole importer in Melbourne of these timbers, we are not unduly worried about our stocks which have been carefully valued.

Trade Debtors and Bills Receivable shows normal fluctuations, and provision has been made for all accounts considered doubtful.

Liabilities—Reserves and Surplus: We have provided preference capital redemption to the same amount as last year.

Referring to the reserve for debenture redemption, you will notice that the sum of £28,600 has been appropriated to this reserve, the increase over that of previous years being necessary to make provision for the redemption of the additional amount of debentures issued during the year.

Profit and Loss Appropriation Account: The amount carried forward, after making provision for dividends and reserves, shows an increase of £273 over the balance brought forward from the previous year.

Debentures: I have already advised you of the reasons for the increase of £315,000 in the debenture issue.

Current Liabilities and Provisions: Amounts owing to subsidiary companies show an increase of £124,262, the company having the advantage of the use of this amount of available funds.

The only other item calling for comment is that of the increase of £799,797 in the overdraft with our bankers. The increase is due mainly to the increased stocks and expenditure on plant necessary to reduce costs.

Contingent Liabilities have increased, the increase being due to guarantees given to bankers to cover overdrafts of subsidiary companies.

Vanikoro.

Production of logs was maintained during the year, and, in addition to supplying the Melbourne market, we also placed quantities in Sydney and Adelaide.

New Zealand Timbers.

Although, as I have already mentioned, we received shipments of New Zealand rimu during the year, the ever-diminishing forests of indigenous timbers in New Zealand have caused considerable concern to the State Forests Service there, and it is likely that the milling of indigenous timber will be still further restricted in the future. Not only will our supplies from our own mills for the local markets be reduced, but it will probably mean that exports to Australia will be curtailed. Having very large interests throughout New Zealand, this is a matter which your Directors view with a great deal of concern. To meet this position we have still further extended our purchases of exotic timbers.

Staff and Management.

On your behalf I wish to thank our Local Boards of Directors, Managers, Executives, Staff and employees generally of the Company and its Subsidiary and Associate Companies for their efforts in unfavourable circumstances during the past year.

Thom & Smith Limited

Radio Manufacturers.

Reg. Office: 919 Botany Rd., Mascot, N.S.W. **Directors:** F. W. P. Thom (Chairman), E. M. Fanker, A. R. Allen, R. C. Hunt. **Auditors:** F. W. Duesbury & Co.

20th Year ended June 30, 1952. Meeting November 21, 1952.

Operations for the first six months were unprofitable due to reduced consumer demand, high sales tax, restriction of time payment, and non-receipt of expected Government orders. However, sales improved after December, and a final profit of £11,177 was achieved out of which preference dividends were paid, together with 4% ordinaries (10% last year).

McPherson's Limited

Manufacturers and Distributors of Machinery, Machine Tools and Engineers' Supplies.

Reg. Office: 546 Collins St., Melb. **'Phone:** MY 270. **Directors:** S. B. Holder (Chairman), F. Grassick, Sir F. G. Thorpe, K.B., H. L. Hastie, D. G. Syme, W. D. McPherson, S. J. Thomas, S. Graham. **Auditors:** Anderson, Hodgson & Co.

Year ended June 30, 1952. Meeting October 16, 1952.

Turnover of the parent company rose by 27% to a record of over £10 million, enabling an earning rate of 24% to be maintained on larger capital. Ordinary dividend is again 10%, leaving £309,000 for strengthening of reserves. Consolidated reserves now exceed £2¼ million, or more than capital in use.

‡"E" shares (issued to employees) rank equally for dividend with ords., but, at the discretion of the directors may receive a rate up to 1½ times the ord. rate.
§N.Z. currency figures converted at 125%.

Capital was increased by £250,000 during the period, and Capital Issues consent was received in August for a further £693,000 to be used to reduce the parent company's overdraft of £1,225,000. Patience & Nicholson Ltd., a subsidiary, also raised £50,000 new capital, and this was received after balance date. At the same time McPherson's disposed of approximately 200,000 5/ stock units in Patience & Nicholson, which is now listed on the Stock Exchange.

Stocks rose by 44% to £4,039,840 for the group. Action has been taken to prevent any undue increase in the value of stocks, without impairing service to customers.

Import restrictions have led to increased purchases from local sources since the close of the year.

All subsidiaries and associated companies had a satisfactory year with the exception of Renold Chains (Aust.) Pty. Ltd., which is now in production, but has not yet reached a profit earning basis. During the latter half of the year, orders fell off generally, but the chairman is confident that demand will rise steadily as Australian industry continues to develop.

The company has been manufacturing and distributing a wide range of hardware throughout Australia for many years. Head Office and research laboratories are in Melbourne with warehouses at Sydney, Adelaide and Perth. Bolt works are at Richmond (Vic.) and Alexandria (N.S.W.), machine tool works at Kensington, pump works at Tottenham and foundries at Tottenham and Kyneton, Victoria. An office was opened in Brisbane in July 1952.

The following are subsidiaries—

Patience & Nicholson Ltd., Maryborough, Victoria—manufacturers of twist drills, taps and dies.

Tool Equipment Co. Pty. Ltd., Sydney, N.S.W.—manufacturers of milling cutters, reamers, etc.

F. W. Hercus Manufacturing Co. Ltd., Adelaide, S.A.—manufacturers of machine tools.

Ajax Bolt & Rivet Co. Ltd., Wellington, N.Z.—manufacturers of bolts, nuts and rivets.

Large interests are also held in Hard Metals Pty. Ltd., Wiltshire File Co. Pty. Ltd., Australian Abrasives Pty. Ltd., and Renold Chains (Australia) Pty. Ltd.

Net tangible asset backing (book values in consolidated balance-sheet)—£2/4/4 for each £1 ordinary share. The "E" shares, which are issued to employees, confer a prior right in a winding-up to repayment of capital up to 20/- a share, but no further participation in assets.

"Sales for the year were again a record, reaching £10,391,411," reported the Chairman, Mr. S. B. Holder. His address reads:

Before proceeding to comment on the Accounts I must refer to the loss suffered by the Company through the death, in April, of Mr. O. W. Hastie. Mr. Hastie served the Company for forty-five years and had been the Manager of our Sydney Branch since 1920 and a member of the Board since 1927. His ability, his knowledge and his untiring efforts were of great value to the Company, to his colleagues and to the staff who worked with him. Your Directors wish to place on record their appreciation of a valued counsellor and friend.

Since the last meeting of Stockholders two new Directors have joined the Board—Mr. S. J. Thomas, who was appointed in December, 1951, and Mr. S. Graham, who was appointed in June, 1952. After the retirement of Mr. A. T. Johnson at the end of 1949, Mr. Thomas was appointed Manager of our Perth Branch, and Mr. Graham recently succeeded Mr. O. W. Hastie in the management of our Sydney Branch. Both Mr. Thomas and Mr. Graham have given many years of valuable service to the Company, and I am quite sure that the interests of the Stockholders will be well served by the addition to the Board of these two gentlemen.

Sales, Profits and Stocks.

Sales for the year were again a record, reaching £10,391,411, an increase of nearly 30% over last year's figure of £8,170,713. The greater part of this increase was due to higher prices, but some increase in volume occurred. The number of individual sales increased from 806,970 in 1950/1951 to 823,221 in the year under review.

During the early months of 1952 there was a slight tendency for business to ease off and numerous cancellations of orders were received. Despite this, sales have continued on a high level, and in recent weeks there have been indications that conditions are again improving.

You will see in the Balance Sheet that there has been a substantial rise in the value of stocks. This has been brought about mainly by higher prices and improved deliveries from our suppliers. Some months ago, in view of the financial position of the Company, action was taken to prevent any undue increase in the value of stocks, and the steps taken have proved their effectiveness without impairing the service which our customers have learnt to expect from us. Stocks at the 30th June, 1952, were in satisfactory condition.

The imposition of import restrictions in March last had little effect on sales up to the end of June, but the result will be more marked during the current year. Wherever possible we are increasing our purchases from local sources, and fortunately deliveries from these sources have improved considerably in recent months. Some lines not yet manufactured in Australia are likely to be in extremely short supply later in the current financial year, and the Commonwealth Government may be forced to review existing restrictions on imports of these lines.

The overall percentage of gross profit on sales was a little lower than last year's, but the total amount of gross profit was higher because of the greater amount of sales. There was a substantial increase in expenses, particularly wages and salaries. The final net profit of £481,645, after providing £394,300 for tax, and writing off £130,835 for depreciation, compares with £476,485 last year after tax of £379,300 and depreciation of £121,021. The figures I have just quoted for last year are after the adjustment of £47,250 over-provided for Income Tax on the profits of the 1950/1951 financial year. You will see from the accounts that this excess provision has been transferred to the General Reserve.

Taxation and Depreciation.

Of the amount of £394,300 provided for Income Tax on the year's profits, you will note that £38,038 has already been paid, leaving an estimated balance of £356,262 still to be paid.

The Commonwealth Government decided not to allow initial depreciation on new plant installed during the last financial year except in special circumstances. In view of high costs and heavy additions to fixed assets in the early part of the year, your Directors considered it prudent to write off in the books 20% initial depreciation on additions during the year. This additional depreciation will not be allowed for taxation purposes, but the Company is claiming initial depreciation where possible on certain items of plant installed early in the financial year.

Capital.

In my report last year I mentioned that we had applied for permission to raise £610,000 of new capital. Subsequently you were advised that the Capital Issues Board had approved our application to the extent of £250,000 only, and these shares were offered to stockholders at par in November last in proportion to their existing holdings. Early in 1952 it was apparent that the Company required further finance and application was made to the Capital Issues Board for permission to make another issue. It was not until August that consent was finally given to the issue of £693,000 of new capital. Stockholders are being advised of the full details of this new issue. The new capital will be used mainly to reduce the bank overdraft, which you will note was £1,225,299 at the 30th June.

Subsidiary and Associate Companies.

The Annual Accounts of all our Subsidiary Companies are published in detail with this report and speak for themselves. All these Companies show satisfactory results for the year, although in some cases orders received during the last quarter of the financial year did not fully cover current production.

Towards the close of the financial year Patience & Nicholson Ltd. obtained permission to raise £50,000 of new capital, and this money has now been received. At the same time your Board decided to dispose of a parcel of shares in Patience & Nicholson Ltd. at a satisfactory price, and as a result of this sale these shares are now listed on the Melbourne Stock Exchange. This transaction still leaves McPherson's Ltd. holding a majority of the shares in Patience & Nicholson Ltd.

With the exception of Renold Chains (Aust.) Pty. Ltd., all our Associate Companies have had a satisfactory year. Renold Chains (Aust.) Pty. Ltd., which was formed in 1949, in conjunction with Renold & Coventry Chain Co. Ltd., of England, for the manufacture of precision chain at Benalla, Victoria, is now in production, but it may be some time before this Associate reaches a profit-earning basis.

Works.

As with our Subsidiary and Associate Companies, all our own factories noticed the falling off in orders during the latter part of 1951/1952. This has enabled them to catch up to some extent on their back-log of orders, and the general feeling of your Board is that the position is now much more stable than it was a year ago. The fictitious demand, which was largely based on a memory of the war years when many goods were very difficult to obtain, has disappeared, and it is becoming easier to gauge the actual requirements of the country. We are confident that the demand for the essential products which we manufacture will rise steadily and will continue to rise so long as Australian industry continues to develop.

Increasing supplies of Australian steel which have become available to our two Bolt Works during the year under review have enabled us to reduce the importation of steel from overseas, and this in turn has allowed us to reduce the stocks of steel carried at the works. Where previously, because of long and uncertain deliveries, we felt we could not with safety carry less than twelve months' requirements on hand or in sight, we are now able to work on a margin of six months.

The new plant at the Richmond factory is now in full production, and the total output of the two bolt factories is averaging well over 1,500 tons per month. This quantity can be further increased when the demand rises.

The Machine Tool Works, owing to increased production and the cancellation of some orders, is now able to offer earlier delivery of "Macson" Lathes, but has a full programme until 1954, including some substantial orders for the Department of Defence Production.

Output at the Pump Works at Tottenham has been an all-time record, and our pumps are held in high regard for their quality.

Dividend.

Your Directors are recommending the payment of the following dividends from the profits of the year ended the 30th June, 1952:

On Ordinary Stock 10%
On "E" Stock 15%

to be paid on the 16th October, 1952.

These rates are the same as last year and will absorb £231,779. This will leave a balance of £249,866 to be transferred to Reserves.

Employees.

As in past years, the relations between the Company and its employees have been maintained on a happy basis. It is fitting that I should here express the Board's appreciation of the co-operation and the loyalty to the Company shown by all our employees during the year.

A marked feature of our employee position is the number of New Australians who are now with the Company. In general, we have found, as so many other employers have found, that these people from other countries differ very little from our own—some are excellent employees, some are fair average quality, and with some we quietly part company after a trial. Many of these men, once the language difficulty has been overcome, are adapting themselves readily to our methods and conditions and must be regarded as a very definite asset to the Company as well as to Australia.

During the year two of our senior machinery salesmen and two of our Departmental Managers spent some time overseas, maintaining contact with our friends in England and keeping abreast of business trends generally. Early in 1953 the Manager of our Richmond Bolt Works will visit England and America to study the latest developments in the bolt manufacturing industry.

Future Prospects.

Indications for the current year are that the Company's business will be maintained at a satisfactory level. The Board is watching current trends of trade very carefully, and feels that the Company is in a sound position to play a major part in the industrial developments which can be expected in Australia in the next few years.

With Head Office in Melbourne and branches in all other States, the company conducts a distributing business in a number of imported lines including stationery, books, jewellery, toys, watches and fountain pens.

Import restrictions and buyer resistance during the second half of the year adversely affected turnover, but more locally manufactured goods were handled. An engineering plant has been acquired and local manufacture commenced of some lines previously imported.

"Arrangements are being made with various of our English principals to undertake the manufacture of their products at the Richmond factory for distribution throughout Australia," stated the Chairman, Mr. H. H. Ponsford, in his Annual Address to shareholders. Mr. Ponsford's remarks read:

The Balance Sheet and Statement of Accounts for the year ended June 30, 1952, show an increase in turnover, but, in common with nearly all trading concerns, the expense ratio has also increased so that the final net profit of £44,844 is lower by £10,692 than in the preceding year. However, in view of the difficult conditions that prevailed over the latter six months of the financial year, the result can be considered very satisfactory.

The following distribution of the nett profit is recommended:—

Payments of dividends to ordinary shareholders	£14,899	18	0
Payments of dividends to preference shareholders	1,250	0	0
Additional provision for bad or doubtful debts	500	0	0
Provision for taxes	17,400	0	0
	£34,049	18	0
Leaving a Balance of	£10,793	19	9
Add to this amount the Balance brought forward from 1951	£8,265	8	11
The Balance in the Appropriation Account carried forward at June 30, 1952, is therefore	£19,059	8	8

Your Directors recommend an ordinary dividend for the year of 10% on all ordinary shares, amounting to 6d. per 5/- share. On the profits made, a higher distribution would normally have been made, but, in the interests of prudence, it is considered wise to build up the Company's reserves owing to the present economic conditions and also to conserve the Company's finance. This addition to the reserves of £11,294, which includes £500 added to the reserve for bad and doubtful debts, is £3,028 higher than the amount set aside in the previous year. The amount carried forward in the appropriation account is now £19,059, and, by adding to this the sum of £2,500 in the reserve for bad debts and £3,750 in the preference dividend reserve, the Company's reserves now total over £25,000.

Payments of the fixed rate of 5% on the preference shares is also provided for in accordance with the terms under which these shares were issued. During the year, i.e., March 1, 1952, an interim dividend of 2½% was paid on the preference shares and a final dividend of 2½% on September 1, 1952.

The rate of company income tax still continues at an abnormally high level. It was hoped that the Federal Treasurer would afford some substantial relief in the last Budget, but the concessions made were very small. The sum of £17,400 has had to be provided for taxation out of the year's profits. The incidence of high rates of sales tax has also militated against the Company's trading.

Turnover

Import restrictions and buyer resistance during the second half of the last financial year, adversely affected the turnover of the Company and our commission earnings in London. Despite these factors, a satisfactory turnover was maintained and has continued during the past few months, including a considerably greater volume of sales of locally manufactured merchandise. It may be anticipated that, with a more favourable trade balance in London, some easing of restrictions will eventuate in the not too distant future.

Manufacturing Activities

During the year, your Directors considered it advisable, in the interests of the Company, to enter the manufacturing field and, therefore, acquired a small engineering plant, which has been reorganised and registered under the name Kedron Pty. Ltd. This factory incurred an initial loss of £1,970 on its first accounts, but it is hoped that, in the not too distant future, it will reach the profit earning stage. A number of items which were formerly imported by your Company are now manufactured by Kedron at the Richmond factory.

Your Directors are glad to say that they were fortunate in obtaining a five years' lease, with the option of purchase, of these factory premises at a reasonable price. These premises have the very great advantage that there is sufficient space available for the storage of the Company's merchandise, which, in the past, had to be held in five or six different outside stores, and a very considerable saving in rent has been effected through being able to concentrate everything under the one roof at Richmond.

Your Directors are also pleased to state that arrangements are being made with various of our English principals to undertake the manufacture of their products at the Richmond factory for distribution throughout Australia, and one such agreement is already completed. It is rarely that any year passes without some additions to the Company's list of agencies, and this year has been no exception. We have secured two or three new overseas agencies, and the distribution for one very large Australian manufacturer.

Already there are signs of improving economic conditions, and its past history shows that the Company has always been resilient and readily adapted itself to changing conditions and circumstances. The wide variety of the lines handled is an insurance against any adverse factors which may rise from time to time. In conclusion we can say that, despite the present unsettled outlook, the Company looks forward with confidence to the future.

Other than as shown by the accounts, the year's operations have not, in the opinion of the Directors, been materially affected by items of an abnormal character.

Pyrox Limited

Manufacturers of Spark Plugs, Domestic and Diesel Equipment, Merchants.

Reg. Office: 14 Queensberry St., Carlton, Vic. **'Phone:** FJ 9121. **Directors:** A. Hoette (Chairman and Manag. Director), Sir Thomas Nettlefold, O.B.E., C. H. Perkins, W. Jaissle, Sir John Jensen, O.B.E. **Auditor:** H. K. Cartledge.

6th Year ended June 30, 1952. Meeting December 5, 1952.

Despite increased costs of production and import restrictions, turnover was a record. Net profit £36,515 is up £2,946 but dividend has been reduced from 15% to 10%.

	1952.	1951.	1950.	1949.
Profits prior to depn. and taxn.	£72,484	£62,569	£62,908	£48,925

Reserves and undiv. profits*	46,041	22,836	21,666	16,909

*1952 incl. £12,500 asset revaln. reserve.

Reserves increased by £23,205 to £46,041 after re-valuation of freeholds by £12,500, an increase of 75%.

As a manufacturing and merchandising organisation, the company has diversified activities. Manufactured lines include:

Sparking Plugs—in order to meet increased demand for new orders, steel was again imported at high cost.

Gas Water Heaters—production in the first three quarters was restricted by shortage of sheet steel.

Diesel Engine Equipment—turnover has decreased due to rising costs, competition from imports and a recession in engine manufacture in Australia.

Magnetic Recorders—new users are being found for the "Magictape" Recorder, and sales have risen.

In its general merchandising division, the company acts for a number of well-known overseas principals, and orders increased for the year, the total on hand at balance date being over £3 million.

A new company is to be formed with Robert Bosch, of Germany, on an equal shareholding basis for the manufacture in Australia of Bosch products. It is hoped to announce details of the new share issue at an early date.

"We regard our local manufacturing business as a sound, safe and necessary foundation for the continued prosperity of our company, and we are devoting our special efforts and attention to the perfecting and extension of our Australian manufacturing activities," stated the Chairman, Mr. A. Hoette, at the Annual Meeting on December 5. His address reads:

The year 1951-52 was a record year in spite of increasing difficulties; the result would have been still better but for the postponement of an important contract due to the temporary shortage of loan funds for certain State works.

Our business is of a two-fold nature:

1. Local manufacture.
2. Overseas imports.

We regard our local manufacturing business as a sound, safe and necessary foundation for the continued prosperity of our company; we are therefore devoting our special efforts and attention to the perfecting and extension of our Australian manufacturing activities. This will make us more and more independent of international political disturbances should they occur, all the more as practically all our products are and will be of an essential nature and of national importance, particularly in the field of diesel and electrical equipment for automotive and industrial requirements. What we have achieved up to now was mainly the result of our own local personnel, resources and experience without any assistance, technical or otherwise, from overseas. You will appreciate our difficulties of competing against long-established overseas manufacturers with large production, all the more as our principal products do not enjoy adequate tariff protection.

Overseas Associate.

In view of the high importance which we attach to our manufacturing activities, I am very happy being able to report to you that we have reached an understanding with Robert Bosch of Germany, whom we have represented for 30 years, to link up with them for combined manufacture in Australia. Robert Bosch is world famous, not only for its pioneering work in the automotive and diesel field, having designed and produced the first magneto, spark plug, diesel fuel injection equipment, etc., but also for the high standard of its quality. Bosch has furthermore been recognised as a leader in establishing manufacture on a scientific basis, the mass production of highest precision goods from interchangeable parts. The special labour-saving machines and methods developed in the course of many years has enabled Bosch to combine highest quality with low costs of production. When we enjoy the benefit of these achievements in Australia we shall be less affected by the increased cost structure due to higher cost of living and wages.

Bosch patents and know-how are of inestimable value and have been eagerly sought by manufacturers all over the world. The Bosch Pyrox link-up is not just a licensing arrangement, but a 50/50 partnership for the manufacture of Bosch goods in Australia, including complete automotive and aviation spark plugs, automotive lighting and starting equipment, wipers, diesel fuel injection units, etc. It is proposed to establish most modern works, for which Bosch will supply special machines and plant developed and perfected in the course of over 50 years, and also leading technical personnel. A new company will be formed in which Bosch and Pyrox will each own 50% of the shares.

Manufacture is aimed to be on the same high technical level as at the home factory, and it is felt that the arrangement will be a valuable contribution to Australian economy, particularly to the important automotive industry, rendering same more and more independent of overseas supplies. A very large contract for original equipment has already been secured, which is in the meantime supplied by the Bosch factory pending local production.

After the last war Bosch recognised the advisability of establishing manufacture outside troubled Europe, and careful investigations on the spot were made in such countries as U.S.A., Canada, South Africa, Japan and Australia. The Directors of Pyrox Ltd. are very glad that they were able to convince Bosch that Australia merited first choice.

The link-up with Bosch will necessitate an issue of new shares, and it is hoped to announce details at an early date.

Tape Recorder.

One Pyrox product that deserves special mention is our "Magictape" recorder, which is becoming more and more popular. Production and sales are steadily increasing. When a leading firm in California recently heard our tape recorder, which had been acquired here by a world famous violinist, they applied for a distributorship, considering that on account of the outstanding qualities of our machine the price was considered quite competitive. We have now produced a special model suitable for the U.S.A. current supply of 110 volt., 60 cycle.

Our overseas agency business is developing very satisfactorily. We are holding firm orders now in the course of execution amounting to over £3,000,000. The commissions due on same will be a record contribution to our profits.

We have been fortunate in being able to engage specialists thoroughly familiar with the processes, plants and products of our principal overseas representations, so that we are in a position to render good service to our various clients.

Lurgi.

Delivery of the Lurgi high pressure gasification plant for the production of town gas from Morwell brown coal has commenced, and it is expected that the bulk of the plant will have been shipped before the end of this financial year. Great extensions are planned according to Dr. Andrews, the Chairman of the Board of the Gas & Fuel Corporation, who recently made a statement before the Australian Planning Institute Congress, to the effect that:

(Continued on next page)

at.

PYROX LTD. (Contd.)—

"The foundations of gasification works had been laid already and plant was on its way from overseas, and it was hoped that the full plant would arrive before the end of next June.

"The plant would consist of six high-pressure Lurgi generators, and when operations began in 1956 would produce 4,380,000,000 cubic feet of gas a year.

"The works would expand rapidly and by 1976 would be producing 60,000,000,000 cubic feet a year.

"This would be converted to provide 20,000 million cubic feet of rich gas (present metropolitan requirements are 8,000,000,000 cubic feet), 20,000,000 gallons of petrol, 22,000,000 gallons of oil, 13,000,000 gallons of tar, 5,000,000 gallons of high octane motor spirit, and 1,500,000 gallons of solvents.

"The gas would pass along a 76-mile pipeline from Morwell to Dandenong, where it would be distributed to three metropolitan reticulation points at Highett, Tooronga and Heidelberg.

"Later, other pipelines would carry the gas to provincial centres."

In view of the shortages of gas coal experienced in recent years it is of great interest that the Lurgi high pressure gasification process can now also be used successfully with ordinary and even very inferior non-caking black coal for the production of town gas.

Highly satisfactory large-scale tests have been made in special Lurgi pilot plants with English West Midlands, Scotch and other black coal. This is of greatest interest to New South Wales where large quantities of lower grades of black coal suitable for the Lurgi gasification process are available. Preliminary tests of the N.S.W. Wallerawang coal, about 70 miles from Sydney, proved this coal to be very suitable for the production of town gas by the Lurgi process. Last week a parcel of 150 tons of this coal was shipped in 1,000 hermetically sealed drums for a large-scale test, to Germany. If these tests are successful, about which there seems to be no doubt, it is contemplated to erect a large Lurgi plant in New South Wales.

The Lurgi gasification plant, whether working on brown coal or black coal, can be extended to produce synthetic fuel, such as petrol, diesel oil and lubricating oil, as well as high grade waxes. The Lurgi Fischer-Tropsch association has made amazing progress in this field both from a technical and economical point of view. A full-scale unit in France has fulfilled all expectations, and a large plant is now being supplied to South Africa. Great interest has also been manifested in Australia in the Lurgi-Fischer-Tropsch process, which makes it possible to produce motor spirits, diesel oil and lubricating oil from our own vast deposits of brown and black coal at competitive prices.

Lurgi have also developed processes and plant to produce pure elementary sulphur from Australian pyrites. Important discussions are now taking place with interested parties.

Lurgi is supplying the electro-filters which form an important portion of the Morwell briquette factories.

Linde.

The oxygen plant on order for Morwell will be shipped during this financial year.

Stahlbau Rheinhausen.

Orders for large deep dredgers, the design of which has been accepted, are expected to be placed in the near future.

Voith.

We shall be tendering for large water turbines for the Snowy River project.

We have had interesting discussions with several Australian engineering firms for the purpose of investigating the possibility of having some portions of plant normally obtained from overseas manufactured in Australia, especially in case of an emergency. We have in our safe keeping complete drawings for various plants and constructions.

I feel that we have reason to look forward with every confidence to the future, both as regards our local manufactures and our overseas business.

Mount Isa Mines Ltd.

Reg. Office: 363 Adelaide St., Brisbane. **London Register:** Adelaide House, King William St., E.C.4. **Directors:** J. Kruttschnitt (Chairman), G. R. Fisher (Vice-Chairman), Rt. Hon. The Earl Castle Stewart, M.C., G. F. Laycock, C. R. Hilton, A. J. Deakin. **Auditors:** Troup, Harwood & Co.

20th Year ended June 30, 1952. Meeting December 8, 1952.

Sales for the parent company rose by 40% to almost £11 million, due to very high prices for metals and a good production rate. Profit rose by 60% to £2,179,758. Dividend is down to 20% (last year 25%) after appropriation of £1 million for completion of the copper plant and general capital expenditure. Following the decontrol of lead prices in the United Kingdom, the company now has to finance operating costs from the time of production of bullion to the date of sale of refined products, and conservation of funds is necessary.

Since 1946, no metal has been produced from the copper section of the company's mine in which estimated ore reserves are 3.8 million tons, assaying 3.9% copper. Production is expected to re-commence early in 1953.

In the silver-lead section, ore output rose from 565,716 tons to 625,137 tons. Ore reserves are estimated at 9.8 million tons (2.2 million tons classified as developed ore and 7.6 million as prospective ore) assaying 6.3 ounces silver and 8.5 lead.

Capital expenditure for the year on mine property, plant and machinery amounted to £1,407,522.

As a result of share acquisitions, the following are now ubsidiary companies:—

The Mining Trust Ltd.,
Britannia Lead Company,
Bowen Consolidated Mines Ltd.

Silver prices fell from 6/6.5d stg. per ounce in July 195 to 6/1 in December, 1952. Lead opened at £171 stg. per to and fell following the decontrol of the United Kingdom price closing at £89 in December, 1952. Zinc opened at £190 stg per ton and fell to £117 in October 1952 and early decontro is expected.

*P. & L. deficiency of £9,883 in subsidiary.

At Alexandria (N.S.W.) the company operates Australia's only Antimony Smelter and one of Australia's two primary tin smelters.

It is also sole Australian manufacturer of antimony oxide and tin oxide as well as largest manufacturer of white metals (type metals, bearing metals, solders, etc.). Copper base alloys and raw materials for the ceramic and paint industries are produced, and the company deals in tungsten and other ores, various machinery and merchandise items and industrial diamonds.

A subsidiary mining company has developed an antimony mine at Point Lookout (N.S.W.) from which a quantity of high-grade ore was obtained this year. Due to the reduced demand, production has ceased temporarily.

O. T. Lempriere & Co. Ltd.

The Acting Chairman, Sir Edwin V. Nixon, read the following address to shareholders at the Annual Meeting on November 11:—

During the year to which the accounts in the hands of shareholders relate, your company experienced wide extremes of trading conditions. In the first half-year buoyant conditions were enjoyed, but during the second half of the period, conditions became much more difficult. This change is the reason for the wide variation in some of the balance sheet items which will be noted when comparing the current figures with those of a year ago.

In consequence of the reduction in turnover, the amount owing by Debtors has been reduced, but it is also pleasing to note that in spite of the more difficult trading conditions, it was possible to reduce the quantity and value of stock on hand. With these downward movements in current assets, there has been a somewhat equal reduction in the combined total of Bank Overdraft and Trade Creditors.

Although the stocks and stores on hand at the close of the period have been conservatively valued, it has been considered desirable, because of variations which occur in metal prices, to appropriate from profits £30,000 as a specific provision against losses which might result from possible downward movements in prices.

Dealing separately with the subsidiary companies, I have to report as follows:—

O.T.L. Drill Bits Pty. Limited.

During the initial year of the company, most satisfactory results were secured and your Directors look forward with confidence to the expansion of activities and profit-earning capacity from this section in the future.

Point Lookout Antimony Mines Pty. Limited.

Due to the reduced demand for antimony and antimonial products experienced by the parent company during the second half of the year, it was necessary to stop production at the mine and defer plans for rebuilding the mill. A substantial quantity of milling grade ore was produced before mining was suspended and this ore, the value of which has not been taken into the Accounts, will be of material benefit when production is resumed. In the meantime, activities at the mine are limited to diamond drilling, but it is anticipated that at a reasonably early date it will be necessary to rebuild the mill and resume full-scale activities for the profitable production of concentrates required for use as raw materials by the parent company.

Future.

Returning to the affairs of the company as a whole, it is pleasing to be able to report, in addition to the satisfactory year now concluded, that results since the balance-sheet date have been encouraging and your Directors view the future activities of the company with confidence.

In concluding, it is once again my pleasure to record the appreciation of your Directors in the competent and loyal manner in which the executives and staff have carried out their duties during the year.

R. B. Davies Industries Ltd.

Reg. Office: 450 Illawarra Rd., Marrickville, N.S.W. **Directors:** R. B. Davies (Chairman), W. Wills, L. T. Crouch. **Auditors:** J. F. Dale & Co.

Year ended June 30, 1952. Meeting October 8, 1952.

Annual turnover was a record, but that of the last quarter was down. However, figures for the three months to September last showed an upward tendency and management is hopeful that the recent easing of credit will facilitate home-building and so help to stimulate sales.

Formed in March, 1950, the company controls a group of well-established subsidiaries engaged in manufacturing and marketing a large range of builders' hardware and other products. Many of the lines manufactured are under licence from American principals.

Last year the company intended to issue a further 173,789 £1 ordinaries at par in financing a 49% shareholding in a new company to be formed to manufacture brass capillary fittings in which Yorkshire Copper Works Ltd., of England, would hold the remaining 51% interest. Consent to raise this capital was refused by Capital Issues Board and under partnership arrangements with the English associates, production facilities for the manufacture of Yorkshire fittings have been established in R. B. Davies' own factory.

The Chairman, Mr. R. B. Davies, referred to the proposed formation of a subsidiary company "Yorkshire Fittings (Australia) Ltd.," when addressing shareholders at the Annual Meeting on October 8. The text of his speech was as follows:—

Our third printed report and balance sheet which was posted to you last week has, no doubt, clearly indicated to you the progress the company has made during the last year. As stated therein, all the company's subsidiaries have made substantial profits. The company has received sufficient dividends from its subsidiaries to maintain its dividend rate at 8% and to place to general reserve the sum of £10,000. The transfer to reserve has decreased from £18,000, the chief factor influencing this decrease was the additional taxation provision that had to be made during the current year to cover the extra taxes payable in respect of the previous year. The Budget announcement on increased taxation was that year occurred after our accounts were finalised and the and taxation provided this year was far in excess of the decrease As transfer to reserve. The nett profit of subsidiaries before ubsidi therefore exceeded the figures for last year.

Sales.

Annual turnover of the subsidiaries was a record but a decrease for the last three months of the year was evident. Figures fo the first three months from the 1st July, 1952, show an upwar tendency. Of course, it will be apparent to all that lack of financ for home building must inevitably have its effect on our sale It is, however, to be hoped that with the easing of Central Ban control over Trading Bank advance policy more money will b available to build the homes that are so urgently required. Althoug importations of builders' hardware did not materially affect ou sales, the virtual elimination of the quantity that was being im ported into this country is re-acting in our favour.

Labour.

Since our last report the position regarding labour has com pletely changed. No difficulty is now experienced by our sub sidiaries in fulfilling all their labour requirements. It is pleasin to note that this has had the effect of improving their worke

(Continued on next page)

R. B. DAVIES LTD. (Contd.)—

efficiency which, with the installation of labour saving plant, has permitted them to carry on without increasing selling prices to cover basic wage increases that have occurred since last December. The basic wage has continued to rise steeply each quarter and has worsened the position with regard to world competition, with a resultant drop in export sales. The case before the Arbitration Court to-day on hours and wages is of vital importance to the country and decisions arrived at will have far reaching effects on our economy.

Yorkshire Fittings (Australia) Ltd.

Shareholders will, no doubt, be interested to know what has taken place with regard to the formation of a company, in conjunction with Yorkshire Copper Works Limited, for the manufacture of Yorkshire Fittings in Australia.

In June, 1951, after negotiations with Yorkshire Copper Works dating back to September, 1950, were finalised, an application was made to the Capital Issues Board for leave to issue 173,789 shares in this Company in the proportion of one share for every three held, so as to enable this Company to take up its share of capital in the proposed new undertaking.

Though it was pointed out that the new Industry would effect a saving of about 50% of the copper in tubes used in hot water and other copper installations; that it would save a great deal of the time occupied in such installations; that in both these ways it would assist greatly in national defence; that it could be used (and, indeed, was urgently required in the last war, when it had been unavailable) for the manufacture of fuses, and was therefore of high importance and priority in defence preparations; notwithstanding that Yorkshire Copper Works Limited was investing £100,000 of overseas capital in the proposed undertaking, the Board refused its consent. Many attempts to secure a reversal of this attitude were of no avail.

In January, 1952, a case was commenced in the High Court under the advice of leading constitutional Counsel to have the Capital Issues Regulations declared invalid, or alternatively to declare that the refusal of the Treasurer to consent to the application was contrary to such Regulations. The Court has, as you no doubt know, held the Regulations valid, but has suspended judgment on the alternative declaration abovementioned until the facts have been determined by a High Court Judge. The case is accordingly still subjudice, and I do not propose to say anything further about it, except that your Directors have every expectation of ultimate success.

In the meantime, so that the arrangements with Yorkshire Copper Works could be effectuated as far as possible, and the loss to Australia of such a valuable industry avoided, R. B. Davies Pty. Limited entered into Partnership with Yorkshire Copper Works to establish, within its own factory, production facilities for the manufacture of Yorkshire Fittings. Plant supplied by Yorkshire is now in process of installation. It is hoped that it will be possible to commence production within four months. A selling campaign has been instituted, and demonstrations given by films and otherwise in Melbourne and Brisbane, as well as Sydney, of the advantages of Yorkshire Fittings.

Should consent to the issue of further capital by this Company for investment in Yorkshire Fittings (Australia) Limited be finally obtained this Company will, by arrangement with the Partnership, revert to its original plans.

Economic Conditions.

I should like to refer shortly to two of the most important matters affecting the future of Australian industry. Individually, we seem able to comprehend that our present conduct may, and indeed must, have a vital effect upon our future. All education is based on the theory that we must attempt to fit ourselves for our future occupations; and the man who adopts the motto of "Eat, drink and be merry for tomorrow we die" is accounted a fool by all thinking persons for his neglect of the future. Yet, under our present system of Party Politics, we entirely neglect our national future, and content ourselves with passing advantages gained at the expense of our political opponents. The Party which introduced a forty hour week at a time when production was essential to Australian advancement, and when the depression had so interfered with our vital statistics that man-power was at a low ebb, gained the approval of those who wanted to do as little work as possible, or who wanted to waste time and make overtime, but did not concern itself with the slowing up of production or the tremendous addition to industrial costs, or the introduction of an extremely dangerous inflationary system. Its motto doubtless was "Let the future look after itself."

Similarly the Federal Treasurer who endeavours to balance a budget providing for higher social services, free medicine and the like, by imposing heavy and ever heavier taxation, forgets that he is jeopardising the future by abolishing the savings for industry of the medium and high income groups, and making it impossible for them to provide capital for industry. As has been pointed out by Mr. S. P. Chambers, Financial Director of Imperial Chemical Industries Ltd., in "Sources of Capital for Industry"—"The ultimate source of all capital is Savings; and saving means consuming less than producing. For all capital in existence, some people, somewhere, must have produced more real wealth than they consumed; or to be more exact, the value of what they have consumed must have been less than the value of what they produced.

"The steady growth of capital is, therefore, necessary if standards of living are to be raised, and savings are the basis of capital formation.

"In Britain much of the manufacturing industry was built up in the 19th Century by family businesses based upon private saving, and the really enterprising individuals backed their progressive ideas with their own money. Sometimes, they were backed by friends or relatives. The progressive family business in Britain has now disappeared because of taxation including death duties.

"From the point of view of the individual, the change (from private savings to institutional savings) is undesirable. There is a growing tendency to seek security. Security takes the form of a safe job with a pension; but this means less opportunity to change from one job to another. Loss of pension rights becomes a great deterrent to a man who might otherwise, seek a more progressive job in another concern. Fifty years ago a man's private savings were very much his own property, and gave him a freedom that he does not get in a pension fund.

"There is also, the effect of this change upon the attitude to work. If harder work brings more money that can be saved and invested at the worker's own discretion, there will be a great incentive to the energetic and enterprising worker. If, however, taxation takes away the greater part of the reward of extra effort, and the saving is done through insurance or pension fund, the incentive for hard work and enterprise is materially weakened.

"For these reasons British industry is going to have great difficulty in the next few years in raising the kind of capital it needs if it is to maintain a progressive outlook. There is no doubt whatever, as to the course that must be followed in Britain if British industry is to keep its place in the world. Reduction of taxation both corporate and private, is no longer a matter of theoretical discussion; it has become a vital and urgent necessity."

I suggest that these illuminating remarks are equally applicable to Australian industry.

As mentioned at the conclusion of last year's report I can only repeat that the future still remains uncertain and that Shareholders must again be thankful for the success of last year, which was achieved in spite of adverse trading conditions and heavy increases in company tax.

W. Brash Macarthur Limited

Softgoods Warehousemen.

Reg. Office: 251 Clarence St., Sydney, N.S.W. **Directors:** W. B. Macarthur (Chairman), H. J. Fraser (Deputy Chairman and Managing Director), J. S. Norton, G. S. Henley, C. H. N. Walker. **Auditors:** W. S. Joiner & Harding.

34th Year ended June 30, 1952. Meeting November 24, 1952.

Profits after tax fell sharply to £3,619 (last year £65,482) due to reduced sales, writing down of stock and reduction of the company's imports by 80%.

Dividend of 5% (12½% last year) absorbing £16,454 was paid mainly out of retained profits, leaving £13,467 carried forward.

"The reduction in earnings is attributable in large measure to Government action taken to curb inflation," stated the Chairman, Mr. L. R. V. Spencer, at the Annual Meeting on November 20. His address reads:

The Year's Trading.

The year's trading and operations have resulted in a net profit, after tax, of £48,455, which compares with £90,078 earned in the previous year.

The reduction in earnings is attributable in large measure to Government action taken to curb inflation, in respect of which the motor trade in general was particularly susceptible.

Nevertheless, sales were maintained at a satisfactory level.

Profits, though substantially reduced, cover the proposed ten per cent. dividend 2.2 times.

Operating expenses were unduly high and, although considered to be within the compass of normal business risks associated with the motor trade, yet, can confidently be expected to be materially reduced in the future.

Franchises.

The Rover Motor Car and the Land Rover Utility continue to give universal satisfaction to users. These vehicles, peers in their class, are deservedly entitled to the good opinions publicised by competent motor engineers and experts. The D.K.W. Motor Car is, I believe, one with definite sales potentialities.

Increased quotas will enable us to resume importations during the current year.

The D.K.W. vehicle will not compete with the Rover Motor Car, and will enable us to cater for the requirements in a lower price field.

Premises.

Our Sturt Street leasehold premises have been greatly improved, and the company now has showrooms, executive and staff offices, and a parts and accessories division which is quite adequate for the needs of the company, and in keeping with the standard of the vehicles we merchandise.

In addition, we have erected a new assembly plant at Flemington, which will relieve our Sturt Street servicing division of much congestion and enable us to cater for servicing needs with greater efficiency and expedition.

Your Board and Management are giving particular attention to the servicing requirements of our clientele.

The capital expenditure during the year on these building projects was approximately £49,000.

Financial.

The overall financial position is sound. The surplus of current assets over outside liabilities, including provision for tax and dividend commitments, being £148,393, or sixty-seven per cent. of the subscribed and paid-up capital. As far as we can see at the present time the company's financial structure is sufficient to the needs of the business.

Wm. Drummond & Co. Ltd.

The following remarks were made to the Annual Meeting on November 26 by the Chairman, Mr. Herbert Taylor:

The year under review has been difficult owing to changing tax rates and credit and import restrictions. However, in spite of rising expenses, I am happy to say we were able to maintain our profits and rate of dividend.

Imports.

Referring to the import restrictions and their effect on the company, we were fortunate in having financial arrangements with London which enabled us to import much valuable stock before the 30th June, and to this is largely attributable the small rise in stocks on hand at that date. These imports enabled us to replace useful stocks in which shortages had developed.

We believe that, by concentrating our future import quotas on particular lines, and by drawing on our large reserve stocks, we can continue to offer the public the widest variety of high-class imported goods for some considerable time to come.

Quality.

Another pleasing aspect of the trade is the increasing excellence of Australian produced jewellery, silver and electro-plated ware. The best of these manufactures have such quality, finish and excellence of design that we can sell them to our customers with every confidence.

Staff.

In conclusion, I wish to thank all members of the staff for their loyalty and co-operation throughout the year.

Wilcolator (Australia) Ltd.

Holding Company in Thermostat Manufacturers.

Reg. Office: 37 Queen St., Melb. **'Phone:** MU 5344. **Directors:** Sir Thomas S. Nettlefold (Chairman), E. A. Austin, G. R. Boulton, G. S. Henley, R. N. Walford. **Auditors:** McGregor & Court.
5th Year ended June 30, 1952. Meeting December 1, 1952.

Turnover rose in value by 45% despite heavy cancellation of orders after March, 1952. Profit was steady on increased capital, but no final dividend was paid because of the need to build up reserves after a period of expansion.

WILCOLATOR (AUSTRALIA) AND SUBSIDIARIES.

"Several important new products will be added to the range during the current financial year," stated the Acting Chairman, Mr. G. R. Boulton, at the Annual Meeting on December 1. He said:

Your Directors regard the results of the year under review as satisfactory, although substantial orders held at March, 1952 (many of which were later cancelled), had given good reason to hope for a better result still.

Establishment and Expansion.

In less than six years the funds of your company have grown from less than £20,000 to about £220,000, and I believe that it can be said that during that period the new capital has been directed into productive channels in accordance with a rational plan of expansion. The company's capital is today fully and profitably employed, and we may hope for it to continue so to be.

It would not be out of place here to reflect for a moment upon the many difficulties which beset a young industry in its struggle for expansion and establishment. These difficulties are perhaps greater where the field of operations is fairly technical as in our case. Apart from meeting the usual risks and problems of business the young company's essential achievement must be to ensure the supply of new capital by being able to give shareholders a suitable reward in the early years and show continuing high promise for the future. Your company has now "been through the mill" in this regard, and it should be publicly stated that the high rates of Company Tax of recent years make this a goal which is very difficult to attain, and to that extent, quite apart from any other considerations, these high taxes undoubtedly operate against the supply of an adequate volume of risk capital so important to a young growing country like Australia.

A great proportion of private industry is only able to show suitable net returns on capital because of large reserves. As we all know, quite often the net return on actual funds employed is very low indeed. The young company is unable to enjoy the shelter of large reserves. Your company during the year earned profits, before Company Tax, of about 14% on average capital and about 13% on average funds employed.

I feel sure that you will agree with your Directors that it is a very wise policy now for your company to write off its Intangible Assets and build up its reserves. I am very pleased to see these reserves growing steadily.

Trading Conditions.

As you have already been told, your company, in common with many others, experienced a considerable falling off in sales towards the end of the last financial year. You are entitled to know that although sales have increased steadily since July, 1952, nevertheless during the first four months of the current financial year they were still at a low level. However, I am pleased to be able to inform you that the intake of orders in October, 1952, was a record in the history of the company, and that sales are continuing to hold at a very good level indeed, and operations during November and December will, we believe, be as profitable as those of any two previous months in our history. If these conditions are maintained during the remainder of the current financial year, we shall have gone a long way towards compensating for the quiet early period.

Exports to United States.

One very pleasing and noteworthy event of the past few months is that your company is now exporting from Australia to U.S.A. thermostatic control bellows made at our Keilor factory. This is the first occasion on which Australia has exported these items to U.S.A. Our products reach the American market at very compet

(Continued on next page)

WILCOLATOR (AUSTRALIA) LTD. (Contd.)—

tive prices and are regarded there as being of the highest quality. This is a great compliment to our technical and production staff men. The volume of these exports is expected to reach a substantial level later in the year.

New Products.

With every year that passes the introduction of new lines widens the company's range of products and strengthens its position. In this regard, management is planning several years ahead. Shareholders should be advised that the field for expansion is very considerable. Each year the company's technical resources in the form of techniques and personnel are being appreciably improved, and the Board's long range plans contemplate a scale of activities considerably in advance of the present level.

Several important new products will be added to the range during the current financial year.

Greater Economy of Operation.

In recent months two factors in particular have made possible a higher rate of profit in relation to turnover. First, we have now taken over in Victoria and New South Wales our own distribution of Thermostatic Controls for domestic refrigeration, hot water systems and electric ranges. This arrangement is proving very satisfactory and will result in considerable savings. The second factor is the greatly improved efficiency in our production and assembly departments which has resulted in a lower labour cost per unit in all sections.

Finance.

The balance sheet at June 30, 1952, shows a strong financial position. The relationship between current assets and liabilities shows a high liquidity factor. I am able to tell you that stocks are being steadily reduced and finances are in a suitable condition to meet the current year's needs in respect of development and expansion.

Directors.

I should like to thank my co-directors for their help and loyalty during a very busy year. We are deeply appreciative of the value of the continued direction of the company's activities by its founder and Managing Director, Mr. Ernest A. Austin. I should like also to acknowledge the company's debt to Mr. Neil Walford, who has guided the financial policy of the company since inception.

Employees.

Your company is most fortunate in having so many loyal and able employees. I believe that Wilcolator has a very happy and well managed factory, and on your behalf I should like to record a resolution of thanks to the management's staff and employees generally.

Sutex Industries Ltd.

Worsted Spinners and Weavers, Manufacturers of Hosiery and Knitted Goods.

Reg. Office: 49 Coppin St., Richmond, Vic. **'Phone:** JB 3161. **Directors:** H. Abrahams (Chairman and Manag. Director), A. D. Nopenaire, B. B. Marks, F. Abrahams, Hon. A. G. Warner, M.L.C. **Auditors:** M. G. Roberts & Co.

Year ended September 30, 1952. Meeting November 21, 1952.

With reduced turnover, net profit was nearly £12,000 less than last year, but provided a return of 10.7% on average ordinary capital after provision for preference dividends.

*Final dividends raised from 7½% and 5% to 7½% and 5¼% respectively.

Plant extensions necessitated an increase of £114,900 in capital during the year, while a total of £243,000 has been invested in plant for the operating and associated companies within the past two years.

Improved technique is being applied to the production of worsted suitings which have already attained favourable recognition. Other new lines are to be added to the present range of fully fashioned hosiery, knitted underwear and outerwear and swimsuits.

"The company's policy of confining production to the better classes of merchandise was fully justified during the past difficult months," stated the Chairman, Mr. H. Abrahams, at the Annual Meeting on November 21. His address reads:

Consolidated profit for the year, after providing for taxation at current rates and depreciation, was £65,175, which must be regarded as a satisfactory result when trading conditions over the past year have been considered. £54,623 has been paid or provided for dividends, leaving £8,552 to be added to undistributed profits which now total £121,712.

Shareholders' Funds have increased by £125,893 (including £114,900 issue of ordinary capital made in January last) to a total of £1,040,500, of which £367,600 is represented by reserves and undistributed profits. The 5/- units of ordinary stock now have a book value asset backing of 8/6 per unit.

Purchases of freehold property (£21,448) and plant (£68,299) were made during the year, and £52,005 was invested in plant for associated companies for the manufacturing and processing of goods sold by this company. During the past two years the sum of £243,000 has been invested in plant for our operating company and associated companies. Installation of these additional productive units was completed during a trading period made difficult by heavy importations of textiles and by credit restrictions. Full production was not, therefore, possible.

Imports and Credit Restrictions.

Early in 1951 large sums were made available by the Federal Government for imports which resulted in excessive quantities of textiles being supplied to the Australian market during the year ended 30th June, 1952, when textile imports totalled **£204,000,000 (£64,000,000 more than in the previous year).** Concurrent with the

SUTEX INDUSTRIES LTD. (Contd.)—
arrival of these goods in Australia, credit policy was reversed (local as well as international) and merchants, traders and retailers, having committed themselves for imports, found difficulty in fulfilling their contractual obligations, enforcing manufacturers to withhold deliveries and consequently retarding production. Clearance of stocks held by manufacturers was not possible on a market flooded with imported textiles offered at less than cost prices and, in fact, manufacturers are still holding goods against contracts which should have been completed months ago.

The effect of these conditions on your company is evidenced by the increase of £142,000 in stocks (which have been conservatively valued), increase of £32,000 in Debtors and additional bank accommodation of £184,000. Stocks have been reduced since 30th June (the balancing date of the operating companies), resulting in an appreciable reduction in bank accommodation.

The danger with which Australian industry and the whole financial stability of the Commonwealth was faced because of excessive imports was realised early this year when stringent import restrictions were imposed as a corrective measure These restrictions, and the more recent easing of local credit, should help to re-establish normal trading conditions, but although this is now becoming evident, it is felt that it will be some months ahead before the necessary confidence is fully restored. Some idea of the effect of import restrictions can be gained from the fact that textile imports for the three months ended 30th September this year totalled £14,000,000 as against £58,000,000 for the same period in 1951, a decrease of 76%.

Current Production.

Whilst current production shows improvement, full capacity is not being achieved because of the fact that merchants and traders generally, shaken by their experience over the past few months, will not commit themselves for forward requirements which may eventually result in shortages of some textiles.

The company's policy of confining production to the better classes of merchandise was fully justified during the past difficult months, and I venture to say that, but for such a policy, the results shown could not have been achieved. The fact that our products extend over many types of textiles has also helped, and it is our aim to expand our business over a wide variety of merchandise by producing new lines and by the continued introduction of new fabrics, designs and colourings. Improved manufacturing and finishing technique is being applied to our worsted suiting productions which, over the comparatively short period since establishment, have become recognised as being the equal of any produced in this country.

Wool remains the dominant factor, not only in the Textile Industry, but of our national welfare, and for this reason it is pleasing to see that it is still being eagerly sought as a necessary commodity. Prices have firmed since the opening of this year's wool sales, and if current market prices are maintained, a prosperous year for Australia and a return to stabilised trading throughout the industry would seem to be indicated.

Future.

Regarding the future, I should like to say that following years of continued expansion and development, your company is today firmly established and well equipped to meet the future. Our plant is flexible and ready to cater for consumer needs whatever the trend or demand.

Staff.

In conclusion, I desire to convey on behalf of the Board and the management their thanks for the co-operation and loyal support of the staff and employees throughout the year.

YORK MOTORS (HOLDINGS) LTD.—Subject to audit, profit year ended 30th November, 1952, approximately £875,000 before income tax estimated at £394,000.

Company Half-yearly Reports

ADELAIDE MOTORS LIMITED—31/12/52: Following greatly reduced deliveries, figures for the organisation as a whole have been satisfactory. Directors do not propose altering capital structure.

ALBION QUARRIES LIMITED—31/12/52: Profits for the period satisfactory.

A.M.C.I.A. LIMITED—31/12/52: Sales lower than in the preceding period, but despite reduced turnover, operations were conducted profitably. There are signs of improved trading conditions during the second half of the year, and the company's liquid position will enable it to step up its activities once the new level of demand has been established.
A freehold property was sold at a satisfactory profit.

A. OAKES & SONS LTD.—31/12/52: Trading results have shown a distinct improvement and the company is now operating on a satisfactory profit basis.

ASSOCIATED LEATHERS LTD.—31/12/52: Although turnover lower than for the corresponding period last year, it is satisfactory under existing conditions.

AUSTRALIAN FOUNDATION INVESTMENT CO. LTD.—31/12/52: Revenue lower than for the comparable period in 1951.

AUTOMOBILE FINANCE CO. OF AUSTRALIA LTD.—31/12/52: Business has been satisfactory and turnover and profit well maintained.

AUTOMOTIVE COMPONENTS LTD.—31/12/52: Trading very successful.

A. V. JENNINGS INDUSTRIES (AUST.) LTD.—31/12/52: Turnover lower in both construction and supply companies as compared with the corresponding period of the preceding year, due to deferment of large government contracts and consequent accumulation of stocks. The construction companies have considerable contracts on hand, but no interim dividend is being paid.

BEARING SERVICE (HOLDINGS) LTD.—31/12/52: Due to the general recession in industry, sales in both industrial and automotive divisions have decreased in most States. Profits at a lower level, but anticipated that dividend requirements will still be amply covered.

BENNIE TEARE LTD.—31/12/52: Turnover substantially less than for the corresponding period of the previous year; financial position becoming more liquid as stocks are reduced.

BOWRINGS (AUSTRALIA) LTD.—31/12/52: Sales have satisfactorily increased over the comparative period for 1951/52. Overhead is higher, but it is anticipated that net profit for the year will not be lower than that earned in the previous year.

BRAEMAR INDUSTRIES LTD.—31/12/52: Trading results on a reduced level in comparison with the previous trading period, but satisfactory.

BRIGHT & HITCHCOCKS (STORES) LIMITED—31/12/52: Turnover well maintained and net profit satisfactory. Sales for January a record.

BROWN-GOUGE LTD.—31/12/52: A small trading profit earned, but no interim dividend will be paid.

BUCKLEY & NUNN LTD.—31/1/53: Sales slightly lower compared with the corresponding period of last year, but the financial result satisfactory.

CAMERON & SUTHERLAND LTD.—31/12/52: Turnover showed a considerable reduction as compared with the corresponding period of the previous year. A reduced earning rate for the current financial year is indicated.

THE CASTLEMAINE WOOLLEN COMPANY LTD.—31/12/52: Trading satisfactory and showed a marked improvement on the previous six months. The mill is running at a maximum capacity in every department, and from orders held, this level in production should be maintained for some months to come.

CHAS. STEELE & CO. (HOLDINGS) LTD.—31/12/52: Sales maintained and profit satisfactory. Acquisition of shares in Viscose Products Pty. Ltd. and Viscose Manufacturing Pty. Ltd completed.

CONTAINERS LIMITED—31/12/52: Results reasonable having regard to conditions prevailing in the industry. Tinplate supplies now exceed demand. The company has acquired the can manufacturing business of T. Dawson & Sons Pty. Ltd., of Sydney, by the issue of 133,333 ordinary shares.

For Information Only

HYDRO-ELECTRIC COMMISSION

£750,000

POWER DEVELOPMENT LOAN

AT £4'15'0% PER ANNUM

PRICE OF ISSUE - Par (£100). CURRENCY - 10 Years

APPLICATIONS

- Applications for the Loan will be received at the Head Office of the Hydro-Electric Commission, at the Offices of the Commonwealth Bank of Australia, at any Trading Bank or Savings Bank in Tasmania, or through members of any recognised Stock Exchange.
- Cash subscribed to the Loan may be made either in full, or 10 per cent. on application and the balance either in full or in instalments of 30 per cent. of the amount allotted at any time up to and including 15th July, 1953.
- The minimum amount which may be applied for and allotted is £50. Applications must be in multiples of £50.
- Subscriptions for the Loan will be accepted free of exchange in Australia.

SECURITY

- Guarantee of the Tasmanian Government as to regular payments of Interest half-yearly on 1st March and 1st September each year, and repayment of Principal on 1st March, 1963. First interest payment will be made on 1st September, 1953.
- Principal and interest are secured upon the revenues of the Commssiion. At 30th June, 1952, the Commission had assets totalling £31.8 million, and revenue for that year aggregated £1.8 million.
- The Commission produces the cheapest power in Australia, and as there is a strong demand for power in Tasmania no difficulty is anticipated in disposing of the output from the developments for which these funds are sought.
- The loan will be listed on the Australian Stock Exchanges and will have a ready market.

AUTHORISED TRUSTEE SECURITY IN TASMANIA AND QUEENSLAND

LOAN CLOSES 4th MARCH

BANKERS — The Commonwealth Bank of Australia

Loan Underwritten by J. B. WERE & SON, Melbourne and Sydney.

COMPANY HALF-YEARLY REPORTS (Contd.)—

COX BROS. (AUST.) LTD.—31/1/53: Sales increased substatially over the corresponding period of the previous year to a record level for a summer season, and net profit increased considerably. Expenses showed a moderate increase in amount, but a reduction in percentage to turnover.

DAVID SYME & CO. LTD.—31/12/52: Revenue from both advertising and newspaper sales satisfactory.

DIE CASTERS LTD.—31/12/52: Turnover maintained and the financial result completely satisfactory. Stock position sound and extension of premises and replacement of equipment proceeding. Orders in hand and in prospect indicate a satisfactory result for the year.

ELECTRONIC INDUSTRIES LTD.—31/12/52: Profits and turnover of the subsidiary companies normal.

ENSIGN DRY CLEANERS LTD.—31/12/52: Turnoyer compared favourably with that of the corresponding period of the previous year, and a satisfactory profit for the year is indicated. Due to improved methods of handling, the company was able to absorb recent wage increases without altering charges.

Plant transferred from South Melbourne to the new factory at Northcote in December. Increases in turnover and efficiency are expected from additional factory space and improved layout.

FELT & TEXTILES OF AUST. LTD.—31/12/52: Estimated trading profits (subject to audit) are not less than £300,000 before taxation. Group sales exceeded £11 million and stocks have been reduced from £6,445,229 by £1,603,802 since June 30. Bank overdraft at £2,704,899 has been reduced by £1,050,726 and sundry creditors and taxation liabilities by £485,966. No interim ordinary dividend proposed but preference dividends are being paid as usual.

F. J. WALKER LIMITED—31/12/52: Trading results of the company and all of its subsidiaries have been very satisfactory.

FOOD MACHINERY (AUST.) LTD.—31/12/52: Results similar to those of the same period during the previous year. Orders on hand lower than in the previous year, but prospects for the ensuing year satisfactory.

FOWLER CONSTRUCTIONS LIMITED—31/12/52: No interim dividend on ordinary shares was paid, as both sales and profits were considerably lower than the corresponding period last year.

Contrary to expectations, trading conditions showed little improvement, due to the continued contraction of Public Works; however, there appears to be justification to forecast gradual improvement in the future.

GEORGES LTD.—31/12/52: Conditions have shown marked improvement and stocks have been reduced to a sound level. Although the volume of sales has dropped from the previous high levels in accordance with the general trend, satisfactory profits have been earned.

GEORGE WARDROP LTD.—31/12/52: Sales and profit lower than for the corresponding period of the previous year, but considerable improvement achieved in December; liquid position strengthened; no interim dividend was paid.

G. J. COLES & CO. LTD.—31/12/52: Results satisfactory with sales and profits both showing increases.

GLAZEBROOKS PAINTS AUST. LTD.—31/12/52: Trading results very satisfactory and turnover and profits show substantial increases for the corresponding period last year. Production of the American product "Spred" will be commenced shortly.

GREEN-McCANDLISH LTD.—31/12/52: The subsidiaries had a decline in business during the half year, turnover being considerably reduced. In view of the partial lifting of import restrictions and the general reduction in stocks, expected that the current half year will show some improvement in trading results.

GRIFFITHS BROS. LTD.—31/12/52: Turnover and profits satisfactory.

HANRO (AUST.) KNITTING MILLS LTD.—31/12/52: Difficult trading conditions experienced, but the order position now more favourable than a year ago.

HAWKE (AUST.) LTD.—31/12/52: Although sales lower than the corresponding period of 1951, a satisfactory trading result obtained.

H. BEECHAM & CO. LTD.—31/12/52: Sales and profits satisfactory, although reduced by unusual trading conditions. Stocks substantially reduced to a level regarded as prudent.

HICKS ATKINSON LTD.—31/1/53: Sales and expenses showed a decrease on the corresponding period last year and profitable trading resulted. Stocks at a satisfactory level. No interim dividend was paid.

HILTON HOSIERY LTD.—31/12/52: Results very satisfactory and sales showed a marked increase for the corresponding six months of the previous year.

HOLEPROOF APPAREL LIMITED—31/12/52: Trading resulted in a small profit. In view of the carry forward of the last financial year, the preference dividend of 2½% will be provided by the parent company, Holeproof Limited in terms of its guarantee of the preference dividend for three years from the date of issue.

JAQUES BROS. LTD.—31/12/52: Output maintained at a high level and this condition is expected to continue for the balance of the financial year. Profits continue to be very satisfactory. It is not proposed now to make a share issue as previously announced, as other arrangements beneficial to shareholders have been substituted.

J. A. TERRETT & CO. LTD.—31/12/52: Trading results satisfactory, and indications are that sales will be maintained during the remainder of the year. It is intended to declare only an annual dividend.

J. H. WHELAN LTD.—31/12/52: A new factory of 10,000 square feet in Collingwood acquired to extend operations of Valencia Shoes Pty. Ltd., the subsidiary company; production will commence in February. In spite of difficult trading conditions, sales were well held, and there has been an upward trend of orders.

JOHN BROWN INDUSTRIES LTD.—31/12/52: Sales compared very favourably with the corresponding period in 1951, and financial results were very much better due to economies effected. On present indications both production and sales for the coming half year will reach satisfactory levels.

JOHN McILWRAITH INDUSTRIES LIMITED—31/12/52: Although sales and profit are slightly below last year's peak they are maintained at a high level and fully justify the payment of the half yearly dividend at the rate of 12½% per annum. Conditions are more competitive but cost of manufacture and trading expenses are being well controlled. A satisfactory result for the full year is expected.

KRAFT HOLDINGS LTD.—31/12/52: Trading operations satisfactory, and sales and profits in excess of those for the same period in the preceding year.

The directors have not yet decided the method by which they will obtain money for the development programme.

LENNONS HOTELS LTD.—31/12/52: Net profit not quite as high for the corresponding period last year, but is considered satisfactory and justifies payment of the usual interim dividends.

LEROY MANUFACTURING CO. LTD.—31/12/52: Trading results excellent. Profit has returned to 1950-51 level, and sales show a slight increase above last year's record figures. Liquid position satisfactory and orders on hand show an upward trend.

LEVIATHAN LTD.—Trading results satisfactory.

MANTON & SONS LTD.—31/1/53: Profit satisfactory and shows a considerable improvement compared with the previous year. Sales maintained slightly below the level of last year. Operating expenses reduced, stocks lowered and the liquid position much improved.

MASCOT UNDERWEAR MILLS LTD.—31/12/52: Sales and production in excess of the corresponding period last year, and are ensured for at least six months ahead.

MAYNE NICKLESS LTD.—31/12/52: Despite a decline in business due to general economic conditions, the profit for the half year is, in all the circumstances, satisfactory. A large leasehold area has been acquired in Dynon Road, North Melbourne for a garage.

MELBOURNE STEAMSHIP CO. LTD.—31/12/52: Results satisfactory. The fleet has been fully employed, and the returns from trading departments are well up to average. An office building being erected in Devonport to accommodate increasing business in Tasmania.

(Continued on next page)

COMPANY HALF-YEARLY REPORTS (Contd.)—

NATIONAL BAG CO. OF AUSTRALIA LTD.—31/12/52: Business in general was wholly maintained and orders in hand suggest that last year's level will be at least achieved.

PAPERHOLDINGS LIMITED—31/12/52: Although turnover was down from last year's record, all subsidiaries traded profitably, and 1953 opened up very satisfactorily.

PYROX LTD.—31/12/52: Sales showed an increase over the corresponding period of the previous year and results are satisfactory, as import restrictions have curtailed sales of some merchandising lines. Contract obtained for the supply of Bosch electrical equipment for the original equipment of "Holden" vehicles. Pending establishment of the new Bosch-Pyrox works in Australia, supplies are being imported.

Good progress made with the Lurgi high pressure gasification plant in Victoria.

RAINWEAR LTD.—31/12/52: Due to difficult trading conditions and the seasonal nature of the company's products, trading was on a reduced scale compared with the corresponding period in 1951. Orders on hand indicate that production and sales for the full year will reach a satisfactory level.

RALPH McKAY LTD.—31/12/52: Turnover and profit well maintained, and orders in hand are sufficient to cover full production for a considerable period.

REID'S QUARRIES LTD.—31/12/52: Trading results were satisfactory and sales were in excess of those for the corresponding period in the previous year.

REPCO LTD.—31/12/52: Because of special market conditions prevailing, sales and profits were materially lower than for the same period last year, but the maintenance of the normal rate of interim dividend is fully justified.

RODD (AUST.) LTD.—31/12/52: Trading shows a satisfactory result at least comparable with the previous year. The liquid position is improved and demand has continued.

SIDDONS DROP FORGINGS LTD.—31/12/52: Trading continued on a satisfactory basis with an increase in turnover as compared with the same period of last year. The building programme at the West Heidelberg works has continued, and one section has been occupied.

SMITH MITCHELL & CO. LTD.—31/12/52: Sales increased and difficulty has been experienced in fulfilling customers' requirements. Malting commenced in one of the newly equipped malt houses, and full production in all units will be attained in a few weeks.

THE SPECIALTY PRESS LTD.—31/12/52: Turnover held at the high level established last year, and this has enabled the absorption of further cost rises, with net profit again at a satisfactory figure. The company has purchased premises of approximately 20,000 sq. ft. at Port Melbourne for warehouse and factory purposes.

STANDARD MOTOR PRODUCTS LTD.—31/12/52: Trading results of the subsidiary companies were lower than previously, due to

(a) Few tractors being available as a result of import restrictions and
(b) Falling off in the profits of the car distributing company.

Because of the necessity to preserve funds for development, the interim dividend has been lowered to 6d per stock unit.

Standard Cars Ltd. and The Standard Motor Co. (Aust.) Ltd. have been converted to proprietary companies, and a new subsidiary, British Farm Equipment, has been registered. Bishops Implements Pty. Ltd. is another subsidiary engaged in assembling tractors, etc.

SULPHATES LTD.—Sales of chemicals by the parent company were reduced with a consequential decline in profits.

The engineering division increased turnover and profit. Overall profits were maintained.

SUTEX INDUSTRIES LTD.—31/12/52: Beneficial effects of import restrictions are now becoming evident throughout the textile industry; surplus stocks have been considerably reduced and trading conditions have been improved. Results of subsidiary companies reflect the improving conditions but the directors do not consider that this warrants an increase in the interim dividend percentage at this stage.

TREADWAYS LTD.—31/12/52: Sales volume high, but did not reach the record figures of the corresponding period of last year. Trading on the whole quite satisfactory and gives reason for optimism for the balance of the year.

T. S. GILL & SONS LTD.—31/12/52: Sales in certain sections difficult but some improvement is now evident.

VICTORIA WOOLLEN MILLS LTD.—31/12/52: Result satisfactory and enough orders are on hand to keep the mill fully occupied until July. Directors are considering the purchase of additional plant to meet increasing demand. It has been decided to revert to payment of annual dividends only.

WARBURTON, FRANKI (MELBOURNE) LTD.—31/12/52: Turnover has been well maintained.

WILLIAM CHARLICK LTD.—31/12/52: The result from trading is most satisfactory.

WM. HAUGHTON & CO. LTD.—31/12/52: Satisfactory profit figures for the first half of the financial year reflect the more stabilised state of the wool and sheep skin markets in contrast with the first half of the preceeding year.

ZEVENBOOM HOLDINGS LTD.—The operating company earned a satisfactory profit although sales were lower than the corresponding period of last year. There was a marked improvement in sales towards the end of the period and this improvement is being maintained.

Things some men talk about.....

. . . particularly in the restful atmosphere of their club, often touch upon things personal. Last night, for instance, Frank brought up the subject of wills—he had recently revised his in view of the changing circumstances of to-day and the possibilities of the future and intended appointing a trustee company as executor . . .
He asked my opinion of the appointment of a trustee company as executor to which I replied, ". . . well,

wise men do....

and, to be perfectly frank, I think it is the best idea; after all, you have broad interests, business interests, I mean . . . you're interested in the share market, real estate, and there is, of course, the business itself. I think you have done wisely appointing a firm of Trustees—the National—to look after your family's interests . . .

National Trustees is the complete *Trustee organisation providing a staff of specialists in every phase of business and estate management—a* permanent *organisation that will carry out* your *wishes for* your *family with the same personal attention you would give to those matters yourself. Free literature giving details of NATIONAL TRUSTEES comprehensive service is available on request, by 'phone or mail.*

Extracts from the address made to shareholders by Mr. R. M. Ansett, Managing Director, at the Annual Meeting held in Melbourne on December 15, 1952:—

I intend to broaden this annual report as far as possible to give shareholders an understanding of the problems facing the Board.

The past year confronted the business community with a set of economic conditions the like of which have not been seen since the last depression. Unquestionably Australia is now achieving considerable success in curbing inflationary tendencies in evidence at the time of the introduction of the 1951-52 budget, but the framers of that Budget did not appear to take into account the strong deflationary effect of world trade conditions on the Australian economy.

While believing that our economy will ultimately benefit from the reversal which has taken place, it was the size and suddenness of the movement which prevented reorganisation being undertaken in sufficient time to cope with the changed economic conditions.

Throughout the whole of our activities, scattered as they are all over Australia and made up of so many separate and different enterprises, this change became very apparent. Buyer resistance developed and the previous method of passing on increased costs by the adjustment of our charges no longer brought the desired results. It became necessary therefore to tackle with the greatest haste reduction of costs in every section of our organisation.

As shareholders are fully aware of the changed conditions, there is no need for me to say more on a general level, and I now propose to make one or two brief comments concerning the influence of these conditions on the Consolidated Balance Sheet of A.T.I.

It will be noticed that the asset, "Stocks, Stores, Work in Progress," has increased since the previous Balance Sheet by £104,0 This abnormally high figure was largely brought about by t subsidiary companies—Liberty Motors and Ansair. Both co panies had large orders placed overseas at the time the changi economic conditions became apparent—and these could not be ca celled. Substantial reduction is taking place as these compan return to more normal trading.

The consolidated Bank Overdraft increase of £92,576 from t previous year is accounted for in one subsidiary only—Liber Motors. Because letters of credit had been established, and lar shipments of vehicles were in the course of being shipped, and the water, this subsidiary's bank balance moved from a credit £1,505 at June 30, 1951, to a debit of £164,645 at June 30, 1952.

It will be seen that apart from this movement in Liberty Moto the consolidated overdraft of all other subsidiaries was reduced.

A further item which calls for comment is "Trade Credito Sundry Provisions, Accruals and Unearned Revenue." The increa of approximately £51,000 in this liability was caused by the gre rise in stocks, and the all-round credit restrictions which limit the finance available through normal channels for the replaceme of vehicles for Pioneer. The latter clearly shows in the next ite under the heading—"Secured Liabilities on Contracts for Asse Acquired" which has decreased in two years from £260,000 in 19 to £104,000 in 1951 and £32,000 in 1952.

Substantial progress has been made in the reduction of the co solidated overdraft and trade creditors, etc., since the balance da and the company's liquidity is steadily reaching a satisfacto state.

Pioneer Tourist Coaches Pty. Ltd.

During the early stages of the period under review, we had ome reason to expect a slowing down of the inflationary rate, and t did seem we were making progress with Pioneer. In that year, owever, the basic wage increased from £8/17/- to £10/12/-, and ith it came higher costs of petrol, dieseline and all other com- odities associated with the operation of this subsidiary.

The recurring cost increases were so great that, notwithstand- ig all we were doing to reduce costs by greater efficiency and im- roved percentage loadings, reduction of staff and overheads, etc., e were unable to keep pace in savings. These cost increases, to- ether with a slight falling off in the demand for our services in ie second half of the period, meant we were not able to produce satisfactory result in Pioneer.

Now, what of the future of this subsidiary company? There is big demand for its services and its turnover remained high in pite of the slight falling off in demand already mentioned.

Last year I told you we were introducing new Flxible Coaches ith larger seating capacity to replace the vehicles previously perated with a maximum of 20 seats, thereby considerably in- reasing the earning capacity of each vehicle. Our programme for placement of these vehicles was necessarily curtailed because of ie changed economic conditions.

We have, however, introduced 19 new Flxible Clippers and on ie routes on which these Clippers are operating, with their diesel igines and increased seating capacity, great improvements have een effected in our results.

We still had 42 other Coaches with a seating capacity for only) passengers. Under existing costs it was impossible to operate iese latter vehicles profitably and 30 of these were, therefore, nverted to 25-passenger units and 12 to 29-passenger units.

As a result of the introduction of the new vehicles and the con- rsion of the old, we now have a total fleet of 135 Coaches, com- ared with 173 twelve months ago, and yet the total of seats avail- ble remains approximately the same.

For the first four months of this year the company's results iow an improvement of £24,000 over the results for the corres- nding period last year and our forward bookings indicate that iis upward trend will be maintained during the remainder of the rrent year. Pioneer is a subsidiary company with a good potential hich will show satisfactory returns and prove a good and solid vestment for Ansett Transport Industries.

Ansett Airways Pty. Ltd.

Ansett Airways Pty. Ltd., in the year ended June 30, 1952, rried 147,946 passengers (an increase of 14,627 on the previous ar) with a total revenue of £840,493 (an increase of £97,789 on ie previous year) and obtained an average overall passenger load ctor on all services of 64%.

Shareholders will recall the protracted consideration given to ie future of airlines by the Commonwealth Government, during hich period, notwithstanding the deterioration of the trading re- lts of all airline companies, it was impossible to get agreement garding fare increases. Although it was obvious in July, 1951, at air fares were too low and must be increased, it was not ntil April, 1952, after the Commonwealth Government had an- unced its intention to enter into an agreement with Australian ational Airways, that air fares and freight charges were in- eased. Therefore, Ansett Airways were forced to continue to erate air services—which I might say we did with the greatest ficiency possible—at a loss.

When agreement was reached between the airline companies for increase in air fares in April of this year, it was not only too te but it was also too little.

The airline industry is now experiencing a difficult period and reluctant to again increase fares for fear of public resistance in e light of what appears to be a slight falling off in demand, and t economies in operation are not easily obtainable.

Aviation gasoline, which two years ago cost 3/1¼ per gallon, has creased to 4/1½ per gallon, and whereas our annual gasoline bill o years ago amounted to £245,000—the cost this year for the entical amount of flying will be £326,000—an increase of £81,000. might add that direct petrol taxation on this amount represents 5,000.

Maximum efforts by senior executives are being concentrated develop revenue to an adequate margin above costs. Notwith- anding the recent moves by the Federal Government, the future private enterprise in the airline field is still in jeopardy and its ntinued existence may very well depend on a more sympathetic proach by the Federal Government to the heavy burden of direct xation on the industry.

Ansair Pty. Ltd.

This company has also had its difficulties. This subsidiary ncentrated its main activities on production of first-class pas- nger buses, but with the real recession which took place in the nsport industry, the demand for new vehicles almost disap- ared overnight. Potential outside purchasers were placed in a nilar position to that of Pioneer and were unable to arrange ance. Ansair, therefore, immediately diverted its activities to her manufacturing work, including the construction of all types commercial vehicles, to compensate for the reduced demand for ises.

The demand for commercial vehicles decreased further and nsair was forced to reduce the number of employees and curtail activities, but, notwithstanding this, the company was able make profits during the year under review, and is still doing so.

Your Directors are confident that sufficient profitable work can obtained for Ansair, although immediate spectacular results can- t be expected. The Board is quite convinced the investment is und and will show an adequate return in the future.

Liberty Motors (Aust.) Pty. Ltd.

Liberty Motors is a motor car distributing house, holding the franchise for Jowett's Bradford commercial vehicles and Javelin cars, together with Stacatruc and a number of other agencies. The company has also now been appointed the Victorian distributor for Vickers-Armstrong tractors and earth-moving equipment.

Liberty Motors which contributed substantially to the results of A.T.I. for the year ended June 30, 1951, experienced during the year under review a big change in its fortunes. Like all other motor car houses, its trading during the first four months of the past financial year was highly satisfactory. Then, almost over- night, large numbers of orders for vehicles waiting delivery were withdrawn.

During the second half of the financial year, Liberty Motors did not cover its selling costs and for the final figures, it was neces- sary to write down the value of its vehicle stocks to a considerable degree.

By reductions in price made possible by this action and the pruning of gross profit margins, we are now bringing the stocks of Liberty Motors to a satisfactory level and, in that way, im- proving its liquid position.

Ansett Hotels Pty. Ltd.

I come now to the subsidiary company in which we have the largest investment and which, therefore, requires our greatest concentration—Ansett Hotels Pty. Ltd.

Excluding Hayman Island and Hotel Manyung, the company conducts 19 hotels—nine leaseholds and ten freeholds. Its original development was undertaken by A.T.I. because Pioneer could not continue to operate without provision and control of adequate ac- commodation, and we progressively obtained hotels in positions of strategic importance to Pioneer.

Amongst these hotels we have some very good ones but we still have much work to do to increase the over-all percentage return on our investment. Through careful and methodical control, we have been able to obtain the maximum returns from liquor sales and to increase efficiency by the elimination of waste and the peg- ging of food and labour costs.

With the continuity of business supplied by Pioneer there is no great problem in management, nor is it difficult to pick up immedi- ately any irregularities which could take place or any falling off in the standard of management.

The hotel company has also suffered because of inflation and rising costs and its inability to immediately pass these additional costs on to the travelling public, and its result for the period under review was not up to expectations. These hotels, which are fun- damental to A.T.I. as an organisation, were affected by the economic change, but now that all indications are towards a slowing down of inflation and a recovery of more normal trading, we believe that this investment will shortly show us a satisfactory return.

In addition to this chain of hotels, our hotel company conducts Hayman Island in the Great Barrier Reef and Hotel Manyung at Mt. Eliza, Victoria.

These two projects were commenced when the inflation which has taken place in recent years was not contemplated. Their con- struction was undertaken during what I believe will prove to have been the most difficult period for building ever experienced in Aus- tralia. At the time of building Hayman and Manyung there ap- peared to be a terrific pent-up demand for better hotel facilities and one would think that in a country the size of ours there would not be the slightest difficulty in obtaining sufficient patronage for these hotels. However, we have found by bitter experience that if an attempt is made to lift the standard to something comparable to first-class overseas resorts at charges a little higher than the average Australian hotel, there is not sufficient demand.

Hayman Island commenced operations as a resort of which Australia could be justly proud judged on any standards. Unlike many overseas countries which have large and continuous support from tourists to maintain their first-class hotels, we in this country must depend primarily on Australians, and therefore, the quality of service given can only be on the level for which Australians are prepared to pay.

By far the majority of Australians lack appreciation of the costs involved in giving service in hotels, and in making compari- sons with overseas resorts it must be recognised that the Austra- lian hotel industry suffers very greatly because of the extremely difficult conditions laid down by our industrial awards, providing as they do for high wages and penalty rates for night and week- end employment.

Realising that we could not continue to operate Hayman Island at its original standard, we completely changed our policy and reduced the tariff to one competitive with tourist resorts in Aus- tralia. I can report that this major change has had an extraordi- nary effect, as its announcement brought instantaneous results, the demand trebling almost overnight. By slightly reducing standards and eliminating certain services we are able to cater for these greatly increased numbers without additional staff and it seems certain that we are now on the right track. We increased the capacity of the hotel to accommodate approximately 180 guests and this has changed the whole aspect, as these 180 people spend a lot of money in our bars, our shops, our launches and other ser- vices, including our air transport to and from the Island.

During September, Hayman had an average of 150 guests. In October and November there were three or four times the number of guests on the Island than in the same months last year, and we are completely booked out for Christmas and the New Year, whereas last Christmas there were only 40 guests.

Hayman is by far the best tourist resort in Australia. It has magnificent facilities unparalleled elsewhere, and now that we have

(Continued on next page)

ANSETT TRANSPORT INDUSTRIES (Contd.)—

the support of the public we should make profits which will continue to improve as time goes on.

Notwithstanding the likelihood of future profits at Hayman, I will not attempt to imply that these will be adequate, having in mind the capital invested.

Hotel Manyung is a lovely hotel situated in beautiful surroundings on the beach of Port Phillip Bay at Mt. Eliza, and was constructed during the same extremely difficult period as Hayman Island.

This hotel is being conducted as a first-class residential hotel with moderate tariff charges, and we have built up quite a large restaurant trade together with a complementary increase in the volume of liquor sales.

This hotel will undoubtedly make profits, but, like Hayman, because of high building costs, it is difficult to see sufficient returns, bearing in mind the capital investment.

The company's experience with these two projects has been an unhappy one. In spite of all the criticism levelled at Australian hotels, I am satisfied that the people in this country get the type of hotels and service they desire.

Shareholders need have no fear that the present Board of Directors will embark on any further projects in the category of the two to which I have referred. We are convinced it is economically impossible to make an adequate return on a modern residential hotel built at anything like present-day building costs. Australia is extremely short of hotel accommodation, but it seems that the building of new residential hotels can be undertaken by private enterprise only by the provision of a substantial proportion of the investment by the Federal or State Governments at really low interest rates.

Ansett Transport Industries went through a period of rapid growth in the immediate post-war years. The urgent and essential job for your Board now is to completely consolidate and strengthen the company financially—to build up some "fat" and to make certain that when "lean" times come again it will have good solid reserves to carry it through, and again become a good regular dividend payer.

With present company taxation at 9/- in the £ it is not easy for any new enterprise to pay satisfactory dividends and, at the same time, continue to build up reserves fundamental to the safe existence of a public company. This has been illustrated beyond question of doubt during the last twelve or eighteen months. Practically all recently developed public companies have found themselves highly vulnerable, primarily because they have built during the inflationary period and have not had the opportunity the years prior to high company taxation to accumulate adequa reserves.

And now, let me introduce a more optimistic note. We were a vulnerable position, but are safely emerging. The bulk of company's investment is in good solid assets which undoubted have good potential profit-earning capacity. We find improvi conditions of trade and we have an exceedingly high revenue whi indicates that there is a great public demand for the servi offered by the company. We are confident that we are emergi from what will become known as the 1951-52 recession, and believe we can look forward to years of sound trading. In additi the company has in its senior executives and all personnel, m who will be the better for the sudden reversals recently expe enced in our fortunes.

Anticipating possible criticism from shareholders as to why Board did not foresee the declining trends more clearly at the ti of the Annual General Meeting last year, I have endeavoured present in my report a complete review. At the same time, I w to explain to shareholders that for the first four months of ev financial year for Ansett Transport Industries is the leanest per of the whole year. The company's real profit-earning period i December, January, February, March and April. These are months during which the company shows substantial profits, a the figures available at this time of the year can do no more th give us an indication of trends as measured against previous yea but, if as happened last year, some extraordinry conditions deve which affect the buoyant months, our forecasts can be inaccura The Board, therefore, feels this year that on giving any pred tions for the current year it must be extremely cautious. On other hand, we recognise that shareholders would like some ass ance on the future prospects of dividends. I can only say that the Directors, are also vitally concerned, and I can assure that the moment the company is safely back to a solid trad position, it will recommence the payment of ordinary dividends.

Before concluding, I must express the Board's appreciation the loyalty and support accorded to it by the Executive staff of Holding Company and all subsidiary companies who have ha very difficult and trying time during our re-organisation and fight for reduction in costs over the past twelve months—and all members of the staff who have pulled their weight magnificen in what has been one of the most difficult periods in the history the Company.

Adelaide Motors Ltd.

Reg. Office: 79 Pirie St., Adelaide. **Directors:** F. S. Mann (Chairman), L. M. Anderson, L. N. Salter. **Auditors:** Harcus, Ingleton, Chambers & Co.

Year ended June 30, 1952. Meeting September 29, 1952.

Ordinary dividends of 100% were more than twice covered by profits after meeting the small preference charge. Reserves now equal 32/- per 5/- ordinary share.

Through a group of subsidiaries, the organisation holds the franchise for South Australia and Broken Hill of Austin cars and trucks; Caterpillar and Deere tractors; earthmoving equipment and agricultural machinery, and Hyster materials-handling equipment.

Deliveries of Austin vehicles for the year were lower by 331 at 3,143 due to reduced demand and import restrictions. This trend continued after the close of the year.

†Adjusted for £53,507 taxn. underprovided.

Paper production for the period was approximately 30,000 tons. A fourth paper machine was brought into production in March, 1952. Power restrictions caused a temporary reduction of output, but economies have since been made, and all machines are now in operation.

Plant was ordered for the projected Geelong mill, but delays outside the control of the company made it necessary to install these machines at Burnie.

Operations of subsidiary companies were:—

Paper Makers Pty. Ltd.—The hardboard plant operated successfully and construction of the sawmill was continued.

Thomas Owen & Co. (Aust.) Ltd.—The parchmentising machine is now operating successfully, and erection of two other paper machines was undertaken.

Ballarat Paper Mills Pty. Ltd.—Production was satisfactory, but was limited by shipping difficulties and power shortages. Demand fell, due to excessive importation of coated papers prior to import restrictions, and after balance date, slight losses occurred.

Papyrus Pty. Ltd.—This subsidiary acquired the board coating business previously carried out by Australian Paper Manufacturers Ltd. There was a sharp recession in the demand for paper boards.

Because of the sharp fluctuations of the world pulp and paper market, the Company has applied for tariff protection against low priced imports which have recently arrived.

Further expansions are planned, and two new machines are expected to be in operation about the end of 1954. For this purpose, a new issue of £1,081,194, at par, was made in February, 1953.

Net tangible asset backing, allowing for uncalled capital and new issue (book values in consolidated balance-sheet)—£1/7/8, of which 6/10 represents provn. for depn., tax, materials, etc.

"A substantial further amount of capital will be needed to complete the expansion programme upon which we are engaged," stated the Chairman, Mr. W. D. Brookes, at the Annual Meeting on December 5. Mr. Brookes also referred to the recent deaths of two of the Company's Directors (the former Chairman, the late Sir Walter Massy-Greene, K.C.M.G., and the late H. St.J. Somerset). Extracts from Mr. Brookes' address are as follows:

A broad picture of the results of the Company's activities during the past year can be secured by observing that in 1950/51 the dividend distribution was at the rate of 6% per annum, and that this rate has been increased to 7% per annum for the 1951/52 period. Further, in 1951/52 it was possible to transfer £77,000 to General Reserve and £66,230 to the Taxation Reserve, whilst in 1950/51 there was no transfer to General Reserve and the transfer to Taxation Reserve was £64,900. In brief, the company has had most successful and profitable year.

Electricity Supply.

Since our meeting last year the hydro-electric power supp position at Burnie has continued to give us concern. On the co pletion of our new No. 4 paper machine, we were faced with t position that we could not increase our demand on the Hydro El tric Commission to the extent necessary to run all paper machin Accordingly, we shut our small No. 2 machine and benefited fr the extra production which our No. 4 machine was capable of. am glad to say now that No. 2 machine has been brought ba into operation, but we have only been able to get through as have done because of our ability to supplement the Hydro Elect

Commission's power supply from our own spare turbo-alternator capacity. We are now supplementing our generating resources by putting in two large diesel alternator sets. One is already running, and the other will be started up shortly.

Production.

Despite power shortage and other difficulties the output from our mill has materially increased in tonnage and value. We produced an increased quantity of eucalypt pulp which contributed to the substantial increase in the quantity of paper produced by the mill. The output of finished paper for the period of 14 months reached a record figure of approximately 30,000 tons, and the output during the current year is likely to rise further.

The world woodpulp market has been most disturbed. As you know, a small percentage of imported pulp is added to the pulp produced from eucalypts in our own mill to enable certain characteristics to be obtained and to facilitate the production of certain qualities of paper which we manufacture. Under direct pressure from the British Government overseas pulp prices fell sharply in February, 1952, from the very high level at which they had been standing. Since this date, further price falls have occurred, and indeed, the landed cost of imported pulp is now only about half what it was 12 months ago. We have taken advantage of opportunities which have presented themselves of accelerating the disposal of our higher priced stocks of pulp in the manufacture of papers by increasing the percentage in papers, and I am glad to say that since the end of the financial year, through our increased production, these stocks have already been practically liquidated without serious loss.

Paper Prices.

With the fall in overseas pulp prices, there has naturally come a substantial reduction in the prices at which English and Continental papers are offered on this market. So far, there is still a margin between our selling prices and the landed costs of similar imported paper. There can be no assurance that pulp and paper prices will not exhibit further wide price movements, and as the Minister of Trade and Customs has referred to the Tariff Board for investigation of the import duties on paper, we decided that this company and its subsidiaries would seek increased duties on the papers we produce, in order to provide effective protection against any further reduction in the margin between our prices and those of competing imported papers of similar quality. In any case, it is of importance to have the Tariff Schedule brought into line with present-day conditions. It was last framed, so far as the paper duties are concerned, at a time when price levels generally were very much lower than they are today. You may have seen some reference to the Tariff Board proceedings in the press, as evidence has been taken, but it will naturally be some months before the Board's report is available, and any changes in tariff rates approved by the Commonwealth Parliament.

Shipping.

I am glad to tell you that in recent months there has been a marked improvement in the availability of shipping out of Burnie. I sincerely hope this will continue.

Expansion.

When we met last year on a similar occasion, our late Chairman gave you some preliminary information about our plan to extend paper manufacturing operations to the mainland.

We continued to press these matters in the various quarters concerned, but we were not able in time to achieve a position which warranted us in proceeding. Two paper machines and other plant had been ordered, and eventually we reached the stage at which, in view of the progress being made with the construction of these units in Britain, we had to commence the building to house them. It was then far from clear that the necessary requirements would be agreed to in Victoria in accordance with the time schedule set, and on 20th February last we announced our decision to transfer the project to Burnie and commence building extensions there forthwith to house these new paper machines. The buildings are now under construction, and if all goes well we would expect to have the first new machine ready for operation about the end of 1954 and the second machine shortly after.

We have not abandoned the idea of a mainland mill or mills; on the contrary, this question will be kept actively before us and will be revived as and when it appears that the governing conditions can be satisfied. Certain it is that even the large expansion we are carrying out at Burnie will not cater for the whole of the normal future demand of the Australian market in our qualities of paper.

As you are aware, from earlier announcements, a substantial further amount of capital will be needed to complete the expansion programme upon which we are engaged, and the time has come to consider ways and means of providing this. Early in the New Year I hope to be able to announce our financial plans.

Paper Makers Pty. Ltd.

The large saw mill which is to produce sawn timber as well as cordwood for the pulp mill is still in course of erection, but the deferment of our programme which this connotes is due to our concentration on other projects which could be brought more rapidly into production and which have a more immediate and direct bearing on the expansion of our tonnage production (against the background of power shortages and the like). In the circumstances, we have preferred to accept delay in the saw mill programme rather than in our other activities.

The most important development affecting Paper Makers Pty. Ltd. has been the bringing into full and regular operation of the Cardboard Mill.

Thomas Owen & Co. (Australia) Limited.

We hold the whole of the issued ordinary share capital of the Australian Thomas Owen Company and, both on that account and because of our interest as its suppliers of base paper and various services, we are directly concerned with the progress of its mill at Burnie adjoining our own.

This mill is to turn out vegetable parchment, greaseproof papers and glassines, and I am pleased to say that its first machine is producing good quality parchment—with base paper from our own mill—to the full satisfaction of the market.

The second machine is nearing completion and should be producing printing and writing papers early in the New Year.

Ballarat Paper Mills Proprietary Limited.

In this mill, the production of good quality coated papers has continued and the installation of the fourth and final coating machine was completed during the financial year.

The profits were sufficient to extinguish the loss incurred during the previous initial year of operations and to pay the preference dividend, leaving a small surplus to carry forward.

Last February the demand slackened to some extent, due partly to reduced consumption and to the flood of imported papers which came into this country, raising the general level of stocks to an extremely high figure. The overseas price of coated papers fell during the latter part of the financial year. Unfortunately, the price trend of these papers has continued downwards since. We have applied for an increase in duty to protect our coated paper business. The present duty is purely nominal having been imposed when prices were much lower than they are today.

For several months past this company has been operating at a loss, but I believe that, providing we secure reasonable tariff protection to which we are entitled, this condition will prove to be transitory, and profitable production will be restored.

Papyrus Proprietary Limited.

Although Papyrus recorded a small profit for its year ended June 30, 1952, no dividend was paid. At the moment, it is suffering from much the same market disadvantages as those which affect Ballarat Paper Mills Pty. Ltd. Its rate of output has been reduced for the time being until the demand for coated board improves. We are supporting an application to the Tariff Board for an increased duty on coated boards.

Ballarat Clay Company Pty. Ltd.

Following the completion of the coating plant at Ballarat Paper Mills a proportion of the construction personnel has been engaged on design and erection of a clay preparation plant at our Ballarat site. This activity will be run in conjunction with our paper coating activities, as portion of the output is to be used in the production of coated papers.

The Company was formed in 1939 by leading Australian newspaper proprietors, who are the ordinary shareholders and to whom output is sold on a firm contract.

The mill at Boyer, Tasmania, draws its power from the Hydro-Electric Commission of Tasmania, but owing to power restrictions, the second machine which was ready to commence production in March, 1951, has been idle except for three months, and full operation is not expected prior to the middle of 1953.

The following report by the Managing Director, Mr. S. L. Kessell, was circulated to shareholders with the Annual Accounts:

The gross production of newsprint at Boyer for the year ended June 30, 1952, was 32,648 tons. This amounted to approximately 25 per cent. of the 130,453 tons of newsprint used by the principal Australian newspaper companies during this period. As there are no other newsprint mills in Australia, the balance of 97,805 tons was imported from England, Europe and Canada. Of the Boyer production, 22,747 tons were manufactured on No. 1 Paper Machine and 9,901 tons on No. 2 Paper Machine.

In consequence of restrictions by the Hydro-Electric Commission on supply of electrical power to the Mill, the new No. 2 Paper Machine was able to operate for approximately three months only, during which time No. 1 Paper Machine was idle. This further testing period on the new machine showed the efficacy of a number of minor modifications made subsequent to the initial test run at the beginning of 1951 and disclosed no reasons to anticipat major difficulties in getting the machine into regular productio when adequate power supply is available.

The power situation is still the Company's main concer Legislation limiting the rights of the Company, and other bu consumers holding contracts with the Hydro-Electric Commissio has been extended to June 30, 1953, and the Company has been in formed that full power supply will not be available before th Tungatinah Power Station commences to operate. This is estimate to be the middle of 1953. It means that the Company has to fac another difficult year with output of newsprint limited to the pr duction of No. 1 Paper Machine. Application has been made fo additional power to enable No. 2 Paper Machine with its large output to operate in lieu of No. 1 Paper Machine for a period o months during the coming summer, and the Hydro-Electric Com mission has undertaken that this will be considered in the light o the water storage position and its works progress at the end of th calendar year.

The whole Mill, including idle plant, is being maintained i good operating condition. Modifications made to the recently in stalled Tidmarsh Grinders have considerably improved the efficiency. The 10 ft. Band Mill is in regular production and work ing satisfactorily. The new Splitter Mill ran well for fifteen week prior to the start up of the Band Mill, but is now closed down unt additional billet production is required for the operation of th two paper machines.

The Company is continuing its programme of research and in vestigation. Good progress has been made during the year in th research laboratory in developing new processes for pulping of som species growing on the Concession area which are not suitable fo the production of mechanical pulp by standard methods of grindin

Logs used in the manufacture of newsprint totalled 24,609,48 super feet. In addition, the Logging Department cut and haule 1,818,950 super feet of logs for lumber production in a sawmi operated by the Company, and 2,039,860 super feet of logs sold t other sawmillers and industries. Five miles of logging roads wer constructed during the year and the road system for log extra tion is well ahead of current operations. The fire season was no severe and no fire losses occurred on the Concession area. Re forestation measures are receiving careful attention and regener tion of cut over areas is showing good development.

The following tabular statement shows the distribution of th Company's total receipts of £2,773,650 for the year ended June 3 1952:—

In Tasmania	
To employees for pay rolls and allied expenses	£570,845 which represents 4/2 in every £
For Stores and Services (other than Government Departments)	£624,524 which represents 4/6 in every £
To State Government authorities (mainly Power and Transport)	£127,700 which represents 11d. in every £
Outside Tasmania	
For Chemical Pulp Stores and Services	£860,768 which represents 6/2 in every £
For Provision for Commonwealth Income and Payroll Taxes	£93,277 which represents 8d. in every £
Dividends to Ordinary and Preference Shareholders	£137,310 which represents 1/- in every £
Retained for Use in the Business, including depreciation and reserves	£359,226 which represents 2/7 in every £

The Company has developed further its housing programm and amenities for employees both at New Norfolk and Mayden Industrial relations have continued harmonious and all Department are to be commended for good work done throughout the year.

At the Annual Meeting on December 4, the Chairman, Mr. H D. Giddy, supplemented the Managing Director's remarks as fo lows:

In the Directors' Annual Report to the shareholders, referenc is made to the death of Sir Keith Murdoch and to the importar part he played in the development of the newsprint industry a Boyer. I am sure that all of us present at this meeting are co scious of a feeling of deep regret that he is no longer with us.

Production.

Right throughout the past year we have experienced a sens of frustration, and a very real understanding of the loss that ha been forced on the consumers, who are practically all our ordi ary shareholders, by our inability to produce the volume of news print for which our plant has been laid down.

The Hydro Electric Commission of Tasmania since early 195 has failed to supply us with the additional power for which pr vision was made in the contract entered into with the Commissio in 1939 and, owing to our inability to produce the additional 40,00 tons of print which is within our capacity, our Ordinary Share holders had to import this volume of newsprint from the othe side of the world, at very high figures. It is no exaggeration t say that the loss to the publishers of Australia by reason of th policy of the Hydro Electric Commission has run into several mi lion pounds.

We have been advised by leading Queen's Counsel that th Hydro Electric Commission is in breach of its contract with us and we have requested that, in terms of the contract, arbitratio proceedings be instituted to get the interpretation of the vita sections of the contract settled.

With our No. 2 Machine lying idle, the capital charges tha have had to be taken up in the production of newsprint totallin

32,648 tons, have been very high, and the price to the consumers of this production in terms of our contract has had to be increased to cover this loading.

The failure of the Hydro Electric Commission has been a major setback for this company, and it is a strong indictment of the Tasmanian Government and the Hydro Electric Commission that a position of this sort should have become possible.

It is a further reflex of the power position that we are not employing all of those whom we would seek to employ. We are waiting to increase the personnel at the mill, and in the forests, and at the loading depots, by several hundred persons. We would hope that these would be in the main family men, and therefore quite an addition to the people attached to and dependent on the mill would be made were we able to operate our plant properly.

At the present time the indications given to us by the Hydro Electric Commission are that we should be receiving power for both machines in the second half of 1953.

The Mill has run smoothly and well during the year; the quality of paper has been satisfactory to our consumers, and we have enjoyed good industrial relations with our staff.

Geo. Pizzey & Son Limited

Leather Merchants, Tanners, Etc.

Reg. Office: 131 Johnston St., Fitzroy, Vic. **'Phone:** JA 5661. **Directors:** T. G. Pizzey (Chairman), C. E. Pizzey (General Manager), H. F. Journeaux, G. B. Pizzey, V. A. Pizzey, W. S. Pizzey, A. E. Pizzey, I. M. Pizzey. **Auditors:** Wilson, Danby & Giddy.

33rd Year ended June 30, 1952. Meeting November 27, 1952.

Turnover was well maintained, but competition and declining prices during the latter six months caused profit to fall by one-third to £78,803. Dividend was reduced from 15% to 10%.

"Our manufacturing departments and subsidiaries have been working to capacity throughout the year, and with one exception have contributed generously to the total results," stated the Chairman, Mr. T. G. Pizzey, at the Annual Meeting on November 27. Mr. Pizzey's address reads:

I am pleased to report another satisfactory year from the point of view of return to shareholders, and although the profits are not equal to those of the record year of 1950/51, your directors nevertheless feel that it should be regarded as satisfactory, as declining values, plus greatly increased competition, could not but have a serious effect on gross profit margins. In spite of the above, turnover was approximately equal to that of last year, but net profits suffered considerably. I feel, however, that such a state of affairs is transitory only, and when the Government feels that sufficient "brake" has been applied, and a more balanced general trading atmosphere created, that industry will receive a reviving impetus, and if, coupled with that, the labour position becomes more evenly and gainfully distributed, we will be well on the road towards the much-quoted resuscitation of the Australian pound.

Manufacturing.

Our manufacturing departments and subsidiaries have been working to capacity throughout the year, and with one exception have contributed generously to the total results. The exception is our Wanganui tannery in New Zealand, which, being part of the assets of the recently acquired New Zealand investment, is not as yet fully equipped, and in consequence has not reached the stage of satisfactory production. While we have met more difficulties than we anticipated, we are hopeful that this tannery will be a revenue producer before the end of the present year.

Plant.

You will notice that this item in the Consolidated Balance Statement has grown considerably, standing today at £216,000 as against £58,000 in 1946. It has been our policy to replace our worn plant with the most suitable machinery obtainable and, although this has been costly, our tanneries and our other subsidiaries are now well equipped and we should be able to avoid any heavy expenditure in plant replacements for some years to come.

From the Balance Statement figures you will have noticed that during the year we disposed of two of the Company's freeholds which accounts for the item under the heading of "Profit on Revaluation of Fixed Assets" of £96,480.

Subsidiaries.

Before making reference to the figures before you, I would like to point out that the subsidiary section of the company's activities since the latest acquisitions, and by the subsidiaries' individual growths, has reached the stage at which collectively they have actually exceeded in their profit-earning capacity that of the parent company. In fact, as these concerns are almost without exception entirely owned by Geo. Pizzey & Son Ltd. dealing in the same commodities and with identical or allied interests, I have felt that the consolidated figures should be of greater concern and interest to shareholders, as those of the parent company represent little more than half of the turnover of the group as a whole. This does not, of course, indicate any weakness nor falling off of the activities of the parent company, but I feel that references to, and quotations of figures other than those of the whole group, are somewhat misleading in the circumstances. I might add that, of the nine associate companies mentioned in our reported accounts, seven of them handle leather as their main commodity, whilst the one deals with goods used in the production or use of leather, or, as Sales Taxation authorities call it, "aids to manufacture." You will see, therefore, that the whole group of our companies should in reality be regarded as the one unit.

Staff.

I can assure shareholders that we have a very efficient staff and no small portion of the year's success is due to their loyalty and ability, and I would like to take this opportunity to thank them.

Since the company's incorporation in 1948, steady progress has been made in bringing out plant and staff from England to a new mill at Shepparton, Victoria, engaged in yarn spinning.

In the second half of the latest year, production was disturbed by the inability of many customers to take up and pay for orders. The position, however, has improved, and despite a maximum of overtime, the company at present cannot me demand.

"During the last four months the plant has been working at full pressure and, in spite of the fact that the staff have worked a maximum of overtime, the company cannot meet the volume of orders from customers," stated Mr. **J. R. Bishop, Chairman, in the course of his remarks to shareholders at the Annual Meeting on November 7. His address reads:**

Having regard to the conditions which prevailed during the year I think you will agree that the results of the operations of the Company are satisfactory.

From July to December, 1951, proved a very profitable period for the operations of the Company, as during this period all plant was fully employed. On the other hand, the period January June, 1952, presented many problems. Many of the Company's cu tomers encountered difficulties with regard to payment of accoun within the usual trade terms, but I am pleased to say that thes conditions have very considerably improved.

During the second half of the year, too, weavers had to mak new ranges of materials to stimulate sales and provide for the r quirements of trade necessitated by import cuts. The Compan had the plant and "know how" to produce yarns for the highe quality cloths, but it had to spin many small lots which were no profitable. However, the Company is now reaping the reward fo

its efforts in this regard as, during the last four months the plant has been working at full pressure and, in spite of the fact that the staff have worked a maximum of overtime, the Company cannot meet the volume of orders from customers.

Overseas Visit.

The Company's Manager, Mr. Hirst, visited England during August of this year for the purpose of inspecting the latest developments in spinning and the trade generally. On his return he reported that, for the Australian trade, the plant at Shepparton appeared to be the most economical and efficient. In this connection it is interesting to note that Mr. Hirst also reported that during the time he was in England he did not see any yarn superior to that produced at Shepparton, and in most cases and particularly in the finer counts, not as good.

Plant Extensions.

Mr. Joseph Smith is due in Australia on the 4th February next, and your Board will take this opportunity to discuss with him plans for the extension of the Company's plant. This extension would be in addition to small quantities of plant which have been ordered for the purpose of balancing the existing plant to meet trade requirements and which should be in operation early in 1953.

The progress this Company has made since its inception is a tribute to the efforts of the Managing Director, Mr. James, the Manager, Mr. Hirst, and the staff of the Company, and I congratulate them on the results achieved.

We are also indebted to Mr. Joseph Smith for his invaluable assistance in England, both from the point of advice on the trading generally and particularly with regard to proposed plant extension. All purchases in England have had Mr. Smith's personal attention.

East African Coffee Plantations Ltd.

Reg. Office: 430 Lt. Collins St., Melb. **'Phone:** M 1787. **Directors:** J. C. Pratt (Chairman), R. W. Barrett (Manag. Director), K. B. Bagley, A. J. Court, H. J. Hoppe, H. C. Just. **Auditors:** E. V. Nixon & Partners.

25th Year ended May 31, 1952. Meeting December 12, 1952.

Coffee production was lower at 372 tons, due to resting from cropping of one of the estates after two years' heavy yield. Because of higher prices, profit of £97,070 was only slightly lower than in the previous year, and ordinary dividend was maintained at 32½%.

*Including exchange equalisation a/c. created in 1949.

The Company is the largest individual planter of coffee in Kenya Colony. This year's crop is estimated at about 250 tons with satisfactory prices expected.

The planters have extended their contract with the British Ministry of Food for a further two years, at a price increase of £75 a ton, for 3,000 tons per annum.

Tea production is being developed as an adjunct to the coffee estates, 225 acres of seedlings having been sown and a factory is to be erected.

Net tangible asset backing (book values)—20/7 for each 10/- share, of which 5/6 a share is represented by plantation development account.

"Given a continuance of satisfactory prices for coffee, I anticipate that the year's operating will result in a reduced but satisfactory profit," stated the Chairman, Mr. J. C. Pratt, at the Annual Meeting on December 12. He said:—

The net profit of £97,070 (Australian Currency), although lower than the previous year's record figure of £105,945, was, I think you will agree, very satisfactory. Distributions by way of dividends and bonus were maintained at 32½% for the year, absorbing £58,500.

The coffee crop harvested amounted to 372 tons, compared with 448 tons for 1950/51. The reduction in the size of the crop was partly offset by higher prices.

Current Assets

The Balance Sheet now before you reflects a further improvement in the state of your company's finances, which are in a very healthy condition. Current Assets plus Investments in Commonwealth and Kenya Government Loans at cost amount to £176,727. Against this, outside liabilities (including provision for final dividend and bonus since paid) amount to £109,509, leaving a net surplus of liquid assets over liabilities of £67,218. This represents an improvement of £30,480 in the liquid position over the twelve months.

Fixed Assets

Your fixed assets in Kenya, comprising plantations and development thereon, machinery, plant, buildings, etc., less depreciation, appear in the balance sheet at £304,631, compared with £287,255 at 31st May, 1951. Your Board considers the valuation of these assets is conservative.

Exchange Equalisation Account

At our last Annual General Meeting I told you that in future it was proposed to make a change in the manner of presenting Exchange Equalisation Account in the accounts. This has now been done. In the accounts before you, this Account stands in the Balance Sheet at £59,093. This is the actual amount of exchange at 25% required in converting the net Kenya assets to Australian Currency. This account should not be regarded as a reserve available for distribution. It is merely an adjustment necessary to enable us to present our accounts in Australian Currency. It will vary from year to year proportionately to variation in our net Kenya assets, and also of course with any alteration which may occur in the rate of exchange between Kenya and Australia. This year we have shown separately an amount (previously included in Exchange Equalisation Account) representing the accumulated balance of exchange received in respect of funds actually remitted from Kenya to Australia. This you will see is now shown under the heading of "Shareholders' Funds" as Exchange on remittances from Kenya, and amounts to £28,248. It is felt that this method of presenting the Exchange position in the Balance Sheet gives you a more correct view of the situation.

Prospects

And now with regard to our prospects for the present year, 1952/53. As the Managing Director has stated in his Annual Report, the coffee crop will be smaller, due to the fact that Kiamara Estate has cropped heavily in the past two years, and it is prudent that it should be rested this season. The estimated crop from all estates is from 275 to 300 tons, compared with last year's 372 tons. Given a continuance of satisfactory prices for coffee (and present indications are encouraging in this respect) I anticipate that the year's operations will result in a reduced but satisfactory profit.

Kepchomo Tea Estate

Development of this estate is proceeding, and it is planned to accelerate the rate of planting in the present and subsequent years. Your Board has now decided to purchase and install a small tea factory, capable of expansion as the output of green leaf increases. We expect to retain our tea capitalisation per acre at a low figure, because we are able to spread our overhead costs over three crops, coffee, tea and maize, and I believe that in Kepchomo Tea Estate we will have a very valuable property, which will progressively add to our profits.

(Continued on next page)

EAST AFRICAN COFFEE PLANTATIONS LTD. (Contd.)—

The Managing Director, Mr. R. W. Barrett, supplemented the Chairman's remarks as follows:—

The Annual Report before you covers the principal operations dealing with events over the past twelve months, and there is little need for me to elaborate on what I have already written. The Coffee branch of our activities is mostly routine and this work proceeds smoothly. Our Tea Development is now getting to a more interesting stage so I will tell you something about our plans in regard to this crop.

In the recent years of good Coffee crops and high prices the Board has set aside portion of the profits each year to provide the finance for investing in Tea Production. I am sure you will agree that it is a wise policy to establish an alternative crop to coffee, and thus have a "second string." Particularly when we bear in mind our experience in earlier years when the market price for our Coffee was at such a low figure.

Tea Development

Tea development has been going on for the past six years. First in a small way, and now to a larger extent. At present there are engaged on tea planting 450 Africans working under the supervision of two Europeans. Each year the tea area will be added to until the new plantings reach a total area of 1,200 acres, which is a suitable area to maintain leaf supplies for a large Tea Factory.

You will have seen from my Annual Report that sufficient progress has been made to warrant the erection of a factory. The latter work will be carried out in stages, the first of which being to install plant and equipment with sufficient capacity to process leaf plucked from an area of up to 500 acres of mature tea bushes. Thereafter adding to the factory as the area of mature tea increases.

The Annual Production, when all the areas of tea bushes reach full maturity, will be well over one million pounds of black tea.

Most of the difficulties attached to opening up a new plantation have been left behind. We have a good organization which is capable of speeding ahead with the remainder of the development, and to erect the tea factory.

The financing of this new work your Directors expect to carry out within the Company's present financial resources, without the necessity to call on Shareholders to subscribe additional capital. Hitherto finance has been available from the accumulations in General Reserve. With production increasing year by year, the proceeds from sale of tea will very soon be more than sufficient to finance this branch of our operations. Tea leaf plucked during the first six months of the current financial year has increased by 100 per cent.

In due course, shareholders will possess in their Kepchomo Tea Estate, an asset very nearly as valuable as the Coffee Estates from which such good returns are now being received. Furthermore, the increasing value of our Tea and Coffee assets present a very favourable Balance Sheet figure in relation to the comparatively low capitalization of the company.

Improvements

As you are aware the Company has been operating in Kenya Colony for the past 25 years. For 20 years of that period, owing to the low prices of Coffee, all available cash was needed for maintaining the coffee areas, with little, if any, money available to carry out rather essential work such as improvements to staff housing, labour lines, and many other necessary improvements on the Company's Estates. Consequently, when the "turn of the tide" came along there was much of this accumulated back-wash to be done. I am pleased to say that over the past two or three years most of these outstanding works have been completed, resulting in improved efficiency.

Mechanisation

Another important matter is that over recent years we have completed the installation of all plant necessary for the mechanization of the Plantations. This comprises modern "Caterpillar" diesel tractors, together with all the agricultural plant required for opening up virgin land and the maintenance of planted areas, also the renewal of Coffee Factory Machinery Units, and motor vehicles. The finance for these improvements, together with those referred to in the preceding paragraph, became available as the result of the past two or three years of profitable coffee crops.

Current Crop

Harvesting of the current coffee crop is proceeding satisfactorily. At date 150 tons have been picked, and I expect the estimated crop to be realised. The Nairobi Auction Sales of new season's coffee commenced in September last, with prices fully up to last year's values, averaging a little over £455 per ton. Generally speaking world prices for all food products remain firm which is a condition brought about primarily by a world of increasing population and growing consumption.

Latest reports from the Plantations indicate that the growing Maize crop is doing well and a good yield is expected.

General Manager

A further item of interest to shareholders is the appointment in June last of Mr. F. M. Gamble as General Manager in Kenya. Mr. Gamble, prior to joining the Company's Kenya Staff six years ago, had farming experience in Australia. This new appointment is in accordance with your Board of Directors' policy of moulding younger men to take a place in the higher executive positions on the plantations. In all other respects there has been no change in regard to the administration.

Mau Mau Disturbances

I will next refer briefly to the recent disturbances caused by the Kikuyu Tribe in Kenya. No doubt the newspaper reports published in regard to the Mau Mau have caused shareholders some concern. When I left Kenya in September the position did not appear to be serious, the Police considering that the situation was then well under control. Subsequent events proved this incorre but I am now in a position to say that throughout these disturb ances there were no unpleasant incidents on any of the Company Plantations. Our labour force, including the small proportion 10 per cent. loyal Kikuyu, throughout this period has remaine quiet and peaceful, working normally, and this they continue to today. In the nearby native reserves the local natives are a litt bewildered with all that has been happening. To these peopl the Kenya Government is giving protection from witchcraft, an from being obliged to take the Mau Mau oath under duress.

Most of the present trouble appears to be in the Mount Keny District which is distant some 100 miles from our Kiamara Esta near Nairobi. The General Manager in Kenya is keeping us i formed of the position. Meanwhile conditions are improving and feel sure that in due course conditions will return back to norma This trouble has been brewing since the year 1947, and now tha it has come out into the open, there is a better chance of cleanin up the Mau Mau.

There are a small number of people, mainly politicians, wh find great pleasure in making misleading and untruthful statemen regarding their fellow countrymen who have settled on the land Kenya. Also in charging the white settler with exploiting th African, and of many other discreditable things. It may be oppo tune, therefore, for me to mention here that over the period of years in which the Company has been carrying on operations Kenya Colony, the average dividend paid to shareholders amount to only 3.2 per cent. sterling per annum on the capital subscribe and paid up by shareholders. Furthermore, we are at prese "ploughing in" a certain proportion of profits in the further deve lopment of the lands we own in the Nandi District of Kenya.

Apropos to the same subject, it would probably surprise man of our critics to know that the area of Agricultural Lands of th Colony alienated to European Settlement, amounts to only about per cent. of the total area of Kenya and, by Act of Parliament, tha area cannot be increased.

Another important aspect in regard to which the Kenya Goverr ment is fully aware, is the vast quantity of employment given t the Africans on European owned Tea, Coffee, and Sisal Estates. is appreciated that, in the absence of large scale commercial in dustries, the increasing African population must look to the Agr cultural Industry as an outlet for employment. In this and many other respects the European makes a large contribution t the economy of the Colony.

Living Conditions of Native Employees

In addition to wages paid in cash and annual bonuses, ov workers are fed, and provided with free living quarters on a sca better than they would enjoy in their own native reserves. W provide our labour force with schools and teachers. Furthermor there is available to each one of them a small plot of land o which to grow food or cash crops. It has been the Company Policy to do all possible for the welfare of its African employee In the light of current events, it may be appropriate, therefore, f me to quote an extract from the address I gave to you at an Annu Meeting of Shareholders held two years ago, on 15th Decembe 1950:—

"We always endeavour to foster good relations with our labo force. Factors contributing to this end are the provision of sui able amenities for their welfare, adequate food rations and, ov recent years, we have done something each year by way of in proving the housing accommodation for our workers. We ha achieved appreciable progress in the above connection and, many respects, have anticipated by voluntary action, measur which are likely to become compulsory on plantations in the ne future. I would say that at present our labour force is contente and to some extent appreciates what the Company is doing f its welfare."

Notwithstanding the adverse publicity which the Colony is r ceiving at the present time, I feel confident that Kenya will co tinue to forge ahead. It is now 30 years since I first went to Keny and during this period I have watched its steady progress a development. One of the latest signs of confidence in the futu is the fact that the Shell Oil Company is expending 40 to 50 milli pounds on a large oil refinery at Mombasa.

Future

As regards the Company's future, we have a valuable group plantations, well equipped and staffed, and these properties are excellent condition. The Coffee branch of our business continu to prosper, and before very long I am confident we shall be in similar position in regard to our production of Tea.

*Subject to intangibles (£12,786 in 1951); in 1951, incl. £486,681 revaln. of freeholds and £58,720 surplus on sale of land and buildings and disposal of shares; in 1949, incl. £10,606 share premiums, £8,300 pre-acquisition profits of subsidiary and £41,390 from insurance fund.

The group is one of the largest general engineering organisations in Australia. Diesel electric locomotives are being manufactured under licence from the General Motors Corporation of America for the Commonwealth, New South Wales and Victorian State Railways, and their performance has been notable in cutting costs and improving railway schedules. Negotiations are proceeding for additional orders which will keep the factory busy until 1954-5.

Operations of the parent Company and its chain of subsidiaries fall under the following main headings:—

The Clyde Engineering Co. Pty. Ltd.—This is the oldest and largest subsidiary, and is concerned chiefly in the heavy general engineering field. It builds railway and tramway equipment, double decker buses, earthmoving equipment, as well as undertaking fabrication of all types of steel bridges.

Clyde Batteries Pty. Ltd.—This is the oldest battery manufacturing organisation in Australia, producing automotive, radio and home-lighting lead-acid batteries and battery chargers, as well as supplying components required by State Railways for their train lighting batteries.

John Carruthers Pty. Ltd.—Acts as the Australian representative for many large overseas organisations, principally in the mining, mechanical, combustion and chemical engineering fields.

Paul & Gray Pty. Ltd.—This is the principal merchandising subsidiary. It is the largest shipchandlery business in Australia, and in its merchandising activities conducts a big trade in the Pacific.

Clyde Sales Pty. Ltd.—Another merchandising division.

Green Point Shipbuilding & Engineering Pty. Ltd.—Mainly engaged in the complete building and/or repair of small ships of up to 300 tons, including maintenance of marine engines.

A. C. Willard & Co. Pty. Ltd.—Engaged in specialised manufacture for the food, chemical and textiles industries. It is a leading fabricator of stainless steel chemical and food processing vessels and machines.

Material Handling Pty. Ltd.—Manufactures material handling equipment under licence from American principals, also heavy earthmoving equipment. It imports and distributes the Ansaldo diesel powered crawler tractors.

Address of the Chairman, Mr. Raymond E. Purves. Delivered at the Fifty-fourth Annual General Meeting of the Shareholders, held in the Council Room, Chamber of Manufactures of N.S.W., 12 O'Connell Street, Sydney.

During the past year considerable progress has been made in consolidating the activities and improving efficiency of operations of the Clyde Group of Companies.

Although the latter half of the financial year ending June, 1952, brought with it economic conditions and trends that have not been experienced for many years in Australia, I am pleased to be able to present your Directors' Report, which discloses an increased consolidated profit before providing for taxation, when compared with that earned for the previous financial year.

Since our last meeting we have reaped some of the benefit that accrues from new plant which has been installed in our various companies, and much has been done to achieve greater personnel efficiency, both of which will immeasurably assist us in facing highly competitive economic conditions.

Our activities are well balanced between capital and consumer goods, with the result that the Group's capacity to earn profits has a much more stable basis than would be the case if we specialised in either one of these categories.

I believe the Clyde Group has largely completed its development stage and that the future financial results will prove the soundness upon which our development has been based.

Before turning to review the accounts for the year, I would like to say how pleased we are to have with us on the Board, Mr. N. K. S. Brodribb, Mr. Raymont Moore, and our General Manager, Mr. K. O. Humphreys. These gentlemen joined the Board during the year, and I am sure that each of them will contribute generously in the guidance of our future operations. Mr. Brodribb, C.B.E., was Controller-General of Munitions Supply during the latter war years, and is an engineer of outstanding qualifications and experience. Mr. Raymont Moore is well known and respected throughout financial circles, and Mr. Humphreys, our General Manager, through his untiring services on the company's behalf, has well merited his appointment, and I am sure you join me in extending our congratulations to them.

REVIEW OF ACCOUNTS

Turning now to the Balance-sheet and Accounts for the year ended June 30, 1952, you will have noted that the consolidated profits of the Group, before taxation and depreciation, amounted to £394,486, as against £362,028 for the previous year.

The net result, however, after providing for taxation, was £164,870, compared with £188,114 for 1951. This reduction of £23,244 has been brought about by an increase in the taxation provision to £154,500, an increase of £50,800, whilst the depreciation charge has increased by £4,902 to £75,116.

The Parent Company's results, after incorporating dividends declared by the Subsidiary Companies, disclose a net profit of £160,754, compared with £140,816 for 1951.

After providing for Preference Dividends and the final Ordinary Dividend of 5 per cent. (making 10 per cent. for the year), there remains a balance of profit in the hands of the Parent Company of £37,007. When added to the credit balance brought forward, this gives a total amount to the credit of the Profit and Loss Account of £155,486.

Your Directors have transferred an amount of £31,305 to the credit of the General Reserve, leaving a balance of £124,181 to be carried forward on the Profit and Loss Account.

With the addition of the amount transferred during the year, the total of General Reserves now stands at £710,000.

The growth of our activities is reflected in the total turnover of the Group. For the year ended June, 1952, the total value of sales of nearly £8,500,000 is about £3,000,000 greater than in 1951.

The increase in turnover, coupled with the effect of spiralling costs, has necessitated an increased investment in current assets. This trend has been accentuated by an excessive stock at balancing date of certain imported equipment, with the result that the total of Group current assets, at £3,541,092, is £1,372,462 more than the corresponding figure for the previous year.

As a result of this movement, our total Bank overdraft at £1,469,001, is £725,016 in excess of the total at June 30, 1951.

With the liquidation of surplus stocks and the benefit of continuing profits, it is anticipated that the overdraft at June 30, 1953, will be reduced to a more normal figure.

You may have noticed on the Clyde Industries Limited Balance-sheet that there is a substantial reduction in current assets, when compared with the 1951 figures. This has been brought about by the transfer of our remaining trading activities from the Parent Company to a Subsidiary Company. This movement is also reflected in the reduction in current liabilities and provisions.

I am pleased to say that all Subsidiary Companies traded on a profitable basis during the year, and indications are that a similar position will hold for the current year, in spite of present economic conditions, which have had their effect more particularly on our merchandising activities.

During the year an additional 451,475 Ordinary Shares were issued at par, raising the total of Ordinary Capital to £1,300,000. We consider that the developments in hand can be financed without a further issue of share capital.

OPERATIONS

Diesel Electric Locomotives and Heavy Engineering

Our main plant at Clyde continues to be fully occupied in meeting customers' requirements for diesel electric locomotives and other items of railway and heavy engineering equipment.

Our diesel electric locomotives, which, as you know, are manufactured under licence from the Electro-Motive Division of General Motors Corporation, U.S.A., continue to give superb performance to our railroad customers.

During the year we completed our order from the Commonwealth Railways, and in July, 1952, we made our first delivery to the Victorian railroad system. The first locomotive delivered for the Transcontinental system has now completed nearly 200,000 miles of trouble-free running, whilst with the advent of new rolling stock, these locomotives have been able to reduce the timetable from Kalgoorlie to Port Augusta from 42 hours to 22 hours. Probably the most important result of Clyde-G.M. locomotives on this Commonwealth line is that for the first time in Peace, a profit was earned for the quarter ended March, 1952.

This profit was reflected at a time when the line was only 50 per cent. dieselised, and we believe that the economies which will result from complete dieselisation will adequately demonstrate the great importance of diesel-electric traction in enabling our railways to combat their operational losses.

Likewise, our locomotives on the Victorian system are giving the same sterling performance as their Commonwealth predecessors. The ability of the diesel-electric locomotive to haul a much greater tonnage in a much shorter time and at a lower operating cost forced the privately owned and competitive American railroads to virtually disregard other forms of locomotion.

I believe that the same necessity for more efficiency and saving in operational expenditure on the part of Australian railways will result in a continuing demand for this type of locomotive power for a long time to come.

Negotiations are well advanced for additional orders for our units, which, if successfully completed, together with the volume of other heavy engineering orders, will keep the factory at Clyde busy until 1954-55.

Our new assembly building, with 100-ton lifting capacity, is practically completed, and new plant is still being installed.

We have, fortunately, not been greatly affected by cancellation of orders.

Other Engineering Activities

Operations at Green Point Shipbuilding and Engineering Pty. Ltd., continue to be maintained at a reasonable level. There have been no major developments on this plant during the year.

A. C. Willard & Co. Pty. Ltd., who specialise in manufacturing plant for the chemical and food processing industries, have increased their range of products, and this Company in the future will be able to avail itself of a broader demand than has been the case in the past.

John Carruthers & Co. Pty. Ltd., Merchant Engineers, who have a large representation for overseas principals, have had a very active year. In spite of the general recession in the purchase of capital equipment, the results for the current year should show an improvement over those achieved during the year under review.

Batteries

Production at Clyde Batteries Pty. Ltd. was a record during the year, and we continue to hold our share of the market demand. The plan to modernise the battery plant has been nearly completed.

In addition, the rubber reclamation plant should be in operation early next year. We are already manufacturing some of our own containers, and this will be expanded in 1953.

Merchandising

Our merchandising activities are conducted by Paul & Gray Pty. Ltd., and Clyde Sales Pty. Ltd. Here turnover was well maintained when compared with the 1951 year.

The advent of increasing operational costs has placed a heavy strain on management in maintaining net profit margins. During the year the range of products handled by these Companies has been broadened, which we hope will result in future benefits.

Sales during 1952 have shown a decline, in common with most other trading organisations.

CONCLUSIONS

The problem of high production costs is something that concerns every Australian manufacturer today.

We have drifted into an economic state where our costs of production are such that the Australian manufacturer cannot compete with overseas competition, without the necessity of a high tariff protection.

Australia needs the stimulus of the export of manufactured products. Exports cannot be obtained in any large or continuing quantities at current production costs.

While this is a challenge to management and worker alike, it cannot be overlooked that management is very much tied by the political economics of the various Governments and their controls.

The high incidence of taxation is a very serious problem, and one that will make it increasingly difficult for private enterprise to finance survival, let alone expansion.

The return after taxation to the investor is inadequate to justify the risks involved in many new enterprises and is not sufficiently attractive to induce a substantial flow of foreign capital.

Australia has been developed largely by private enterprise and by individual initiative.

I earnestly hope this will continue to be the case in the future, but unless taxation can be reduced to provide that additional incentive to the employee, the executive and the investor, then the efficient development of this country must be retarded. Australia must be expanded by Australians, or there are others who will take it and do it for us.

Depreciation allowances made by the Taxation Commissioner are far from sufficient to enable industry to replace obsolete and worn-out plant, and are generally much below those allowed overseas, where they have the additional advantage of a much greater volume, both for the local and export markets.

It is perhaps not unnatural that such a comparatively young country as ours should experience these growing pains during its development. However, I feel sure that good leadership, wise council, and individual effort will ultimately overcome these problems.

The main factor in overcoming them will, of course, be individual effort, and we must realise that nothing worth while is achived without hard work, and, when I say hard work, I mean on the part of each and every one of us, whether we work with our hands or our brains, or both.

Australia is a wonderful country, and has a great future, and it is worth working for. It is towards this future and the development of Australia that Clyde is proud to play an important part, and it is our responsibility to see that Clyde keeps pace with Australia's future requirements.

It is, and will remain, our constant objective to introduce more efficient products and methods.

In conclusion, I desire on behalf of my co-directors and myself, to record appreciation of the excellent services rendered by the executive officers, staff and employees of our Parent and Subsidiary Companies.

I now formally move that the Directors' Report, Balance-sheet and Profit and Loss Account for the year ended June 30, 1952, be adopted.

Easter Vacation

The Stock Exchange will close at noon, Thursday, 2nd April, and re-open on the morning of Thursday, 9th April.

Felt & Textiles of Australia Ltd.

Reg. Office: 261 George St., Sydney. **Melb. Share Register:** 11 Bank Place. **'Phone:** M 1337. **Directors:** Cecil Rhodes-Smith (Manag. Director), L. A. Lochrin, J. H. Titchen, H. W. Rowden, L. B. Jacobs, R. J. Webster. **Auditors:** Smith, Johnson & Co.

32nd Year ended June 30, 1952. Meeting December 4, 1952.

Due to the general recession in textiles and the fall in wool prices, a loss of £473,577 was sustained. This deficit was offset against reserves and accumulated profits, enabling preference dividends to be continued, but no ordinary dividend was paid this year.

*Profits and loss are stated after adjusting outside s/holders' interests.

†In 1950, incl. £1,018,798 real estate written up.

Operating mainly through subsidiaries, the company owns a large group of merchandising, manufacturing and treatment businesses which fall under the following main headings:—

(1) Wool scouring and carbonising.
(2) Woollen and hair-felt manufacturing.
(3) Carpet manufacturing.
(4) Woollen and Worsted Spinning and Weaving.
(5) Footwear manufacturing.
(6) Plastic coating and Adhesives.
(7) Sundry activities such as clothing manufacturing, waste sorting and treatment plants.

Although the textile trade appeared to pass its lowest ebb prior to December, improvement was slow, due to buyer resistance and accumulation of stocks, part of which were imported.

"The past twelve months have been the most difficult trading period experienced by the company since its flotation as a public company," stated the Chairman, The Hon. Sir Walter Massy-Greene, K.C.M.G., in his annual address to shareholders. His remarks read:—

In concluding my statement at the last Annual Meeting I indicated that the aggregate trading results for the year to date had been better than the preceding year but that what the rest of the year held was difficult to predict. Subsequent events proved that the uncertainty then felt as to the future was more than fully justified.

Before making the customary references to the Company's financial position and reviewing, to some extent, our widespread activities, I would like to make a few general remarks explanatory of what I am sure shareholders will regard as an extraordinary reversal of the Company's fortunes, but one which your Directors confidently expect will be temporary and passing.

Though it was stated in last year's Directors' Report that wool stocks had been written down to current values as at June 30, 1951, we drew attention to the fact that special provision had been made against possible recession of market value of stocks to the extent of £500,000.

As shareholders are aware, your Company, through its many ramifications, is the largest domestic consumer of wool both in the Commonwealth and New Zealand. The stocks of wool in the combined operations of the Company's factories at any moment, covering raw wool, work in process and manufactured goods, are very large, so that a heavy fall in wool values over a year's operations is necessarily a very serious matter, particularly at a time when as I will later explain, business was stagnating.

Though there was a small recovery in wool prices towards the end of June, 1952, the fall persisted with some fluctuations during the financial year 1951/52.

The Commonwealth Statistician's Export Index price for wool based on 100 (the average of three years ending 1938/39) in June 1951, was 717. In June, 1952, after a recovery from a low of 46 in March, the Index number was 566. This discloses a fall over the year of 23.893 per cent. This fall in price, necessitating a revaluation of our wool stocks, has been the primary cause of our losses. I will refer later to other events that worsened the whole trend of our business during the last seven months of the year under review.

To a lesser extent other commodity stocks necessary to the Company's business were affected by the general recession of trade

and involved some measure of revaluation. In making revaluation of stocks of June 30, 1952, every care has been taken to ensure that the revaluation is a realistic one in the light of current values after taking into account all known factors affecting the realisability of stocks.

Whilst I am not criticising the measures which the Commonwealth Bank and the Federal Government thought it necessary to take to deal with the economic conditions that had arisen, it is advisable that I should point out the cumulative effect they had upon your business.

As I have already pointed out, the wool market was rapidly falling and at the same time internal costs were rising with equal rapidity. The pressure on your business was being exerted from both sides.

It was manifest to the authorities that large as had been the importations in 1950/51, those of 1951/52 promised to be even greater. Direct encouragement had been given to an importation drive in the belief that a flood of imports would check inflation by permitting an excess of goods to absorb spending power.

A reference to the Preliminary Bulletin on Overseas Trade for 1951/52, issued by the Commonwealth Statistician, will show that in that year various articles made by your organisation were imported to the value of £26,301,601. It is, of course, obvious that the whole of this importation would embarrass others besides ourselves, but a very large proportion of this competition fell directly upon your business.

Then came the credit restrictions by the Commonwealth Bank just at a time when the pressure of overseas purchasing was being felt. The effects were immediate. Instead of the regular flow of orders which had been our experience for a long time past, orders fell away to vanishing point and cancellation of forward orders took their place, while manufactured stock began to pile up. The change manifested itself with great suddenness and almost overnight. A fear complex gripped the trading community which affected the woollen textile trade with greater force and rapidity than any other branch of industry. This, no doubt, was largely caused by the uncertainties surrounding the wool market and, to a certain extent, is still with us.

Financial

The consolidated accounts for the year show a loss of £473,577, of which £434,286 is the aggregate loss in the subsidiaries and £39,291 in the parent company. You will have seen from the Directors' Report that an amount of £370,520 has been transferred from the special reserve of £500,000 previously created to meet such a contingency with which we are now confronted. Of this latter amount £160,000 stood to the credit of special reserve in certain subsidiaries and has now been credited to the Profit and Loss Account of those subsidiaries.

The special reserve of the parent Company was £340,000 and of this an amount of £210,520 has been debited to special reserve in the books of the parent Company and credited to the asset "Advances to Subsidiaries." This amount of £210,520 corresponds exactly with the aggregate debit of the subsidiaries Profit and Loss Appropriation Accounts.

Except where otherwise stated I refer to the consolidated accounts and not to those of the parent Company. The principal variation in the Balance Sheet compared with that of June 30, 1951, is the reduction of stocks by £3,630,670 from £11,679,701 to £8,049,031 and of sundry debtors by £1,049,454 from £3,992,249 to £2,942,795. Liquid assets in the aggregate are less by £4,653,446 than at June 30, 1951.

Fixed assets have increased by £883,496 the total at June 30, 1952, being £7,026,001. The major portion of this increase was represented by expenditure in completing plant installations.

These variations are reflected in the substantial decrease in current liabilities by £3,539,657 from £9,060,412 to the present figure of £5,520,755.

Wool Processing, Spinning and Weaving

Our wool companies embrace the activities of wool scouring and carbonising in New South Wales, Victoria and South Australia, and wool top making in Victoria. The production from these plants was adversely affected during the year by the world-wide recession in the textile industry, coupled with most difficult conditions experienced locally. This state of affairs was reflected in the receding wool prices over the past year.

The spinning and weaving companies are conducted in a number of centres in Victoria and this section of our business uses considerable quantities of wool and wool tops. The impact of large and, in many cases, haphazard imports of textiles was felt towards the end of 1951 and had an increasingly adverse effect during the first half of 1952. Orders were cancelled on every pretext; buyers spread or delayed their payments and very few new orders were placed.

The woollen and worsted sections are being reorganised to cope with these new conditions. With the exception of some spinning plant of the latest type, the whole of the plant has now been installed. This plant is an efficient plant judged by modern standards—the lay-out is in accordance with the most up-to-date practice and it is installed in modern buildings. With these advantages, I believe that, given reasonably favourable conditions, our mills are in a very strong position to withstand local competition in the future.

Present indications are that the textile trade reached its lowest ebb a few months ago, and it is therefore likely that conditions will tend to show some improvement. However, the improvement is as yet only barely perceptible and the position has certainly not reached the stage where I can assure you that conditions "are reasonably favourable." Although the stock position of textiles in Australia appears to have generally improved, buyers are nevertheless placing their orders most cautiously and are influenced in no small degree by the current uncertainty in the prices of wool.

Felt Manufacturing

Although the demand for felt piece goods suffered for some months through consumer resistance, the position has shown marked improvement in recent months for our major lines such as "Feltex" and "Teprac" floor coverings.

The new felt plant at Granville, Sydney, is now operating and the transfer of operations from the Botany Road Mill to Granville will shortly be completed. Already substantial production is being achieved at Granville and this will be steadily augmented over the next few months. The resultant economies in production costs and improvement in quality through the operation of the new plant should have far-reaching benefits on your Company's major felt operations and be reflected in future trading results.

Opportunity has been taken during recent months to consolidate our Victorian Felt Manufacturing activities in the one mill at Footscray which is operating at economic levels and is experiencing good demand for its products. This consolidation, which involved the merging of two small felt plants from Williamstown and Daylesford with the Footscray plant, was made possible through the completion of the carpet factory and the consequent transfer from Footscray of the original carpet plant to the new factory.

Demand for the products of our hair felt factories suffered during the earlier part of 1952 in common with our other products. Of recent months, however, the factories have been working at economic levels and with more stable conditions in raw material markets it is expected that this section of the business will continue to show satisfactory returns.

Footwear

Our footwear activities have in the aggregate been less affected by adverse trade conditions than our other operations. Highly competitive conditions now rule in the footwear trade and these have called for some readjustment of manufacturing and distribution arrangements. In particular, we have found it necessary to close three small factories established in country districts in earlier years when it was necessary to decentralise in order to secure labour. With the altered conditions in the industry and labour in the cities becoming available, it was found that the expense of maintaining these decentralised units was uneconomic and it was with some regret that we found it necessary to reduce our commitments in country areas.

We are paying particular attention to styling and merchandising in our footwear. Our trained staff and specialist factories are concentrating on producing footwear in types particularly suitable for the present needs of the Australian market and the demand for our products is most encouraging.

Carpet Manufacture

During the year, the carpet mill buildings at Tottenham, Victoria, were completed and the Wilton plant transferred from Footscray so that now the whole of the Wilton and Axminster plant is housed on the one site, resulting in increased efficiency and economy of operation. The installation of the new broad loom plant is still proceeding.

The carpet Company did not escape the effects of excessive imports of carpet into Australia during the latter half of 1951 and production was curtailed as a result until March this year. Since then the situation has progressively improved. Production has been built up to satisfactory levels again and factory capacity is booked up for some months to come.

The carpets produced by this plant enjoy a high reputation throughout the trade and compare favourably with carpets produced overseas.

Clothing

In spite of excessive importations of made-up clothing the demand for the production of our clothing factories was reasonably well sustained throughout the financial year assisted to a degree by Government orders for clothing for the armed services. Since June, defence demands have slackened and civilian demand has been more in the lower priced section of the trade which our factories are particularly equipped to cater for.

Wadding, Flocks and Waste

Although competition was keener, wadding, flocks and waste enjoyed another good year. Demand for these products is influenced to a considerable extent by conditions in the bedding and motor assembly industries. Nevertheless, we look forward to continued satisfactory profits from this section. Plants are now operating in Sydney, Melbourne and Fremantle.

Other Activities

Quilting, embroidering and braiding, despite difficult trading conditions brought about by the flood of importations, contributed reasonable profits. Plastic coating and combining operations have been extended during the year and enjoy a steady demand on satisfactory profit margins.

New Zealand

Felt and Textiles of New Zealand Limited showed satisfactory results under the difficult conditions of trading in the Dominion during the past twelve months. The falling commodity markets coupled with the effects of the prolonged waterfront strike, involved the Company in substantial stock losses. In spite of these factors, it is satisfactory to record that the Company earned sufficient profit to maintain its customary 8% dividend on ordinary shares.

The net profit for the year ended March 31, 1952, was £64,338 as compared with £77,015 in the preceding year.

South Africa

Felt & Textiles of South Africa Limited is no longer a subsidiary of the Company although we still retain a large holding of ordinary shares.

(Continued on next page)

FELT & TEXTILES OF AUSTRALIA LTD. (Contd.)—

During the past twelve months South Africa has also been experiencing difficult trading conditions. The overall result of the South African Company for the year ended June 30, 1952, was a small profit sufficient to cover preference dividends, but not enough to enable a dividend to be paid on ordinary shares.

General

The past twelve months have been the most difficult trading period experienced by the Company since its flotation as a public company. The textile industry has experienced a world-wide recession and in this country the effects of that recession have been aggravated by the flood of importations and the credit policies of the Commonwealth Bank and Government. During the current year, these aggravating effects have been mitigated by Government action and it can reasonably be expected that trading conditions should show progressive improvement.

So far as this Company is concerned, it is firmly established in a series of integrated industries based largely on the utilisation of wool. Its plants are modern and conservatively valued. Stoc have been written down in accordance with current market valu With its products it caters for primary needs of the community clothing and housing. Given reasonable conditions of trade a more normal levels in commodity markets I am confident of t Company's ability to meet the future.

I cannot conclude without saying how sorry we are that George Pearce is no longer with us. As you have been inform the Board appointed Mr. Robert Webster to fill the vacancy caus by Sir George's death. He is with us to-day. I am sure you know his record as an outstanding industrialist and, on your h half, I would like to extend to him a cordial welcome while co gratulating ourselves on having acquired his services.

I must, too, convey to our Managing Director, Mr. Rhod Smith, our thanks for the outstanding work he has done throu a very difficult period and, also, to the other Executive Direct who, with staff and employees, have rendered great service the Company during the year.

The new factory buildings and installation of plant at Fairfield, N.S.W., are nearing completion, thereby providing scope for increased productive capacity for 80,000 transmission units per annum, to meet the expanded demand arising from production of automobiles in Australia. Hitherto, all transmission equipment for new motor vehicles, tractors, etc., has been imported into Australia, and local industry has only catered for replacement parts.

Investments in land, buildings, plant, etc., rose during the year by £1,096,258, and to meet this expansion, overdraft rose by £570,288 and further bank funds were obtained after balance date. Further share capital was not raised due to the difficult conditions prevailing in the money market.

Net tangible asset backing (book values)—1st pref., £90/0/3; 2nd pref., £17/16/1; ord., £1/2/2.

"We have commenced the manufacture and assembly of transmission units for passenger cars, trucks and tractors and this is a new and major engineering development in Australia," stated the Chairman, Mr. G. C. Coburn, at the Annual Meeting on December 5. He said:—

The Net Profit for the year after writing off Trading Expenses including Depreciation and making provision for Taxation was £101,946 as compared with £61,512 for the previous year.

These results which surpass all previous years in volume of turnover and profit are evidence that the progress of the company was satisfactory.

For the greater part of the year the subscribed capital totalled £870,000 and it was not until April, 1952, that further Capital to the extent of £763,000 was obtained. Even so, as is evidenced in the balance sheet, the Company was in overdraft £768,392 at 30th June, 1952.

Finance

It was several years ago that your Directors decided upon a plan of expansion and in 1950, when I addressed you I drew attention to the rapid growth of our company. I then explained that the requirements of capital had been planned as to the raising of same from time to time.

The obtaining of money on the public market in accordance with this planning was successfully carried out until the early part of this year and was sufficient to meet the progressive expansion of your company. Unfortunately, as is well known, the conditions in the open market greatly deteriorated in the early part of this year and since then it has not been possible to obtain additional large sums of capital from that source.

Your directors then sought financial assistance from the company's bankers and help has been given to an extent that evidences the fullest possible support by the Bank. It is anticipated that the overdraft will, at its peak period, exceed the present subscribed capital of the company but that position will be rectified when conditions in the money market permit.

This is the first year in which we have not maintained our regular dividend. The accounts now presented to you show a record profit but, unfortunately, the cash resources of the company must be conserved to the utmost. Therefore, with regret the directors do not recommend the payment of a final dividend.

Scope of Operations

The erection of new factory premises at Fairfield proceeded during the year. Much plant was purchased and a good deal of it tested ready for use. Plant was moved in the latter part of the year from Alexandria to Fairfield and this movement has continued in the current year. All these activities tend to distur business because the transference of a major part of our manufa turing operations from Alexandria to Fairfield and the absorptio of large additions to plant cannot be accomplished without di turbance to production.

It is therefore expected that this year will see us fully o cupied with the many problems arising from such causes.

While on the question of company expansion I think it is prop that I should explain to you just what this programme really mean

Your company from its inception some 25 years ago has bee closely allied to the Australian motor car industry. Since the wa important developments have taken place in the manufacture Australia of motor cars of all types, and also trucks and tracto and the Commonwealth Government has for many years been active interested in this development.

One of the early important moves was made in 1936 when, wi a view to widening and strengthening the Commonwealth's seconda industries, the Government indicated that it would give strong a decisive encouragement to the establishment of motor vehicle pr duction in Australia.

War-time requirements caused a temporary shelving of the objectives but same were revived after the war. It was in 194 that car manufacturers made a major move towards increasi the Australian made content in passengar cars and commerci vehicles. These companies have greatly increased and are co tinuing to increase their capital investments in Australia in ord to meet these changed conditions and in close co-operation wi these moves our expansion programme was undertaken.

We have commenced the manufacture and assembly of tran mission units for passengar cars, trucks and tractors and this a new and major engineering development in Australia. The buil ings at Fairfield are so designed as to permit the latest mass pr duction methods to be employed.

The plant has a production capacity up to 80,000 transmissi units per annum and it augurs well for the future that we c supply original transmission equipment in such large quantities the automotive industry.

The motor vehicle industry is recognised as vital to defen and the plant and equipment and buildings owned by your compa could play a very important part in that regard.

Balance Sheet

Turning to the balance sheet it will be seen that freehold la and buildings represented a capital outlay of £498,392 and in th item there was an increase in expenditure during the year of £314,9

The outlay on plant and machinery, motor vehicles and off equipment bought or under construction or on which deposits h

been paid reached a total of £1,427,195 as at June 30, 1952.. The cash expenditure under this heading during the year was £841,287.

In regard to current assets comprising stock on hand, work in progress, sundry debtors, etc., the total of same at balancing date was £1,234,085 or an increase of £526,845 when compared with June 30, 1951.

When the present section of our programme is completed the value of assets employed will approximate £4,500,000.

The liability of the company to its bankers and to creditors totalled in all £1,248,610 or an increase of £865,085.

The debt owing for the purchase of Annexe plant and buildings from the Commonwealth Government reduced by £26,463 and the amount still to be paid under this heading was £110,699.

The expansion in the assets of the company during the year was £1,641,853 and the finance for these items was mainly provided by additional capital of £763,000 and bank overdraft extension and outside current creditors.

Reserves and undivided profits at balancing date were £225,248.

Future Outlook

This review deals with the period ended 30th June, 1952.

Future prospects for the Company on a long range programme are very encouraging. The new factory at Fairfield should be completed during the current year and all plant installed. Our products are sold throughout Australia and New Zealand and with new methods of manufacture being introduced it is hoped to extend our markets beyond those territories.

We read a good deal about the need to save dollars and it can be said that we are in a position to make a very real contribution in that regard.

A further matter of importance is that an application has been made to the Commonwealth Government for a review of tariff in respect to the goods we manufacture.

It will be clear to you from the brief summary I have given that during the year a very heavy burden has fallen upon the shoulders of all your employees from your Managing Director downwards. We believe the willingness and enterprise of the company's executives and staff will continue in the future and enable the company to emerge successfully from the difficulties now being experienced during this period of dislocation.

Staff

I wish to convey to the employees and the management the appreciation of the Directors for their loyal service throughout the year.

Holeproof Apparel Limited

Reg. Office: 853-873 Whitehorse Rd., Box Hill. **'Phone:** WX 1081. **Directors:** Major-Genl. Sir Julius Bruche, K.C.B., C.M.G. (Chairman) (alt., J. G. Duff), Sir Norman Martin, Kt., A. G. Staley, J. F. Barns, A. L. Young, A. G. Eastwood. **Auditor:** E. Fookes.

2nd Year ended June 30, 1952. Meeting September 30, 1952.

Reduced turnover reflects the slackening of trade in the clothing industry. Before providing £30,000 for writing down of undelivered stocks on order, profit was £1,378 (£13,124 for previous nine months period). Final preference dividend of £2,500 was paid by the parent company, Holeproof Ltd., under the terms of its guarantee of the preference dividend for three years after allotment.

(Continued on next page).

Toppa Ice Cream Ltd.

"The increasing demand for our product is most encouraging, and we are limited at the present time only by our productive capacity," stated the Chairman, Mr. A. E. Hayman, in addressing shareholders at the Annual Meeting on December 10. Mr. Hayman's address reads:—

The Annual Report under review covers an initial trading period of only six months. Despite all the difficulties, it can clearly be claimed that Toppa is now being well received by the Victorian public, and is taking its place in the Ice Cream Industry of Australia. The increasing demand for our product is most encouraging, and we are limited at the present time only by our productive capacity. Many shopkeepers are clamouring for supply, but we are unable to cater for their needs at present as we do not wish to undertake to supply more shops than we can adequately serve. Our customers can rest assured that we will not undertake to supply more shops than we can fully cater for during heat wave conditions.

Owing to the rigid Capital Issues Control, our progress, in common with many others, has been somewhat retarded, but your Directors are very gratified with the results achieved, and whilst a trading loss is shown for the short trading period, depreciation amounting to £5,708 has been taken into account.

Expansion

It was generally agreed by your Directors and Technical Advisers that in order to more fully cater for the demands for Toppa, larger premises would be needed much earlier than we had originally anticipated. We are fully confident that a long sighted policy should be adopted. Very large and suitable premises have been purchased at Brunswick, and the Company is in the process of changing over, and when completed, it should provide for this State's requirements of Toppa for a very long time to come.

The property, including vacant land, is sufficient for our future needs.

You will notice that we have acquired the adjoining land which will enable us to concentrate all our efforts and cater for all the other associated lines connected with our business. A well planned and up-to-the-minute factory will result, and will allow for the most scientific and economic production in a splendid geographic position.

Selling Policy

I have just returned from a world trip, where I have had the opportunity of studying the progress the Ice Cream Industry is making in other lands, and many of the ideas can be applied as we move to our new premises. Throughout the world, the Industry seems to be flourishing, although many new trends are noted. It is very gratifying to note that our quality and selling policy are meeting with such overwhelming success. We are maintaining a very vigorous advertising, selling and public relations department. The seasonal nature of our business is causing us some concern as we cannot supply customers in excess of our ability to produce during the peak periods. This problem is a world-wide one in our Industry, and in most cases, this has been met by vigorous advertising and featuring the "Take Home" packs of Ice Cream. Ice Cream is a most acceptable and popular dessert—one of the handiest, and easiest to serve, cheaper and more acceptable than cream. These features have been hammered home in all our advertising in New Zealand, until the winter losses have been turned to very good profits.

Need for a Trade Association

Much of the most effective advertising has been done on a National scale and by the industry getting together on such matters, a greater impact has been made. It is a matter of considerable regret, and I know a great loss to the industry as a whole, that the Ice Cream industry of Australia does not pull together on these and other matters of trade interest. In many other countries, well organised associations and their trade groups constantly advise and work together on matters vitally affecting their industry. In little New Zealand, we have been able to bring about many changes by solid and unified representation to the Government and other authorities. As a result, our industry is always consulted when any changes in the Food Act, Health Laws, Labour Laws, etc., are contemplated, and draft copies of any proposed changes are submitted to us for our recommendations and comments. We are then able to submit what we consider suitable manufacturing technique which will bring about the desired result. Also this solid representation has been the means of having Sales Tax removed from Ice Cream. Constant research and the pooling of knowledge and technical know-how has also paid dividends. The industry here in Australia has much to learn and to gain by the adoption of a better trade outlook and get-together. As Manufacturers, we set out to serve in the best way—the public, the shopkeeper and our shareholders. It is no real achievement to run a competitor to earth or to make it difficult for them to continue in business, but every means should be followed to have the industry regarded as a good sound healthy investment.

I trust that the industry here in Australia will get together for its mutual protection.

Last week, I was interviewed over the Air regarding the Ice Cream Industry throughout the World, and I stated then, and it will bear repeating—that we supply a health food, having the blessing of the medical world and all food conscious people. All Ice Cream is good—the very nature of its ingredients, put together in such a pleasing manner, make it very attractive to young and old alike. By research and vigilance, we can always quickly capture the public taste, and in this regard, your Company will always be well to the fore. Toppa's selling policy, which has already proved so successful is based on quality, helpful service, and the advertising support given to our shopkeepers. We do not tie our shops with contracts, we do not cut prices, nor do we adopt practices which are not considered sound and prudent business. It must be obvious to all that since the advent of Toppa, a much great variety of Ice Cream is available and that the public and shopkeepe alike have received much better service by the industry.

We are confident that this policy is successful, and should accepted by all engaged in the industry as good sound marketi and it is to be hoped that we will never be forced to reduce t high ethical standard.

Sales Tax

I understand that Ice Cream is the only Dairy Product in Au tralia subject to Sales Tax. This is a burden on the industry a public alike. Why should our kiddies be so taxed when Ice Crea is such a health food.

Staff

I wish to duly recognise the work and untiring efforts of m co-Directors and the management of Toppa. I am not here ve often, but I am kept well advised, and as my New Zealand Compa is such a substantial shareholder, I greatly appreciate and tha them for the time and care given to your Company's affairs, and wish to assure them that we have complete confidence in the w they administer the affairs of this Company.

Future

Finally, I wish to assure you that, having due regard to t difficult times through which we are passing, Toppa is a Compa which will take a leading place in the Ice Cream Industry of Au tralia.

Touching 18 m.p.h.

THE NEWSPAPERS AND MAGAZINES which bring pleasure to leisure owe a great deal to the keen eye of Henry Nosworthy.* For it is his skill and constant watch on the virgin paper rolling through the machines at 18 m.p.h. at Bowater's Canadian Corner Brook Mills that detect flaws which, unobserved, could cause hours of delay during the printing run.

One of a well-practised team which ensures that newsprint comes speeding off the six paper-making machines at Corner Brook in a continuous flow day and night, Nosworthy comes of a line of Cornish fishermen who settled in Newfoundland four centuries ago. His specialised skill is not hereditary but the machine has not yet been invented which can replace it. Only a lifetime of experience can ensure the correct and uniform tension of the thin, wide sheet as it winds swiftly onto the roll. Every twenty minutes a blast of compressed air rips the racing belt of paper across, simultaneously wrapping the loose end round the spindle of a fresh roll. For the space of a split second the white hypnotic flow is interrupted and then continues as before. In the past twenty years astronomical miles of paper have passed smoothly beneath the sensitive hand and shrewd eye of Henry Nosworthy.

The whole wealth of Bowaters craftsmanship, experience and research in the art of making paper—the 'know-how' in short—is freely at your service.

The improvement in the year's results reflects the increased producer's price of copper, which rose from £250 a ton to £285 in November and to £350 from 25th August. Copper stocks at balance date were valued in the accounts at £280 per ton.

For several years the Company has been engaged in long-term development of the West Lyell open cut, including removal of overburden. Improved mechanisation brought total ore and waste removal to a record of 2.6 million tons.

Production of the treatment plant in recent years has been—

Years ended Sept. 30—	1952.	1951.	1950.	1949.
Ore treated—tons	1,439,800	1,515,157	1,516,832	1,426,114
Copper, %	.62	.65	.64	.65
Blister copper produced—				
Tons	9,123	7,044	8,072	3,871
Containing—				
Copper—tons	9,048	6,990	8,009	3,840
Silver—ozs.	28,631	22,567	27,851	14,089
Gold—ozs.	5,069	4,277	5,326	2,394

In 1952 the whole of the year's concentrates and a good tonnage of stored concentrates were smelted to produce the 9,123 tons of blister copper.

Estimated ore reserves are down from 30.2 million tons last year to 28.4 million tons, but it is now thought practicable to deepen the open cut, thereby increasing reserves by 14 million tons.

A feature of the accounts is the large investment holdings in other companies. Appearing in the balance sheet at over £2.4 million on a "cost or under" basis, they are worth substantially more than that figure, but even at that valuation they represent £1/1/3 for each Mount Lyell share, without attaching any value to the substantial mining assets. Investments at 30th September comprised—

The following are extracts from the address given by the Chairman, Mr. W. E. Bassett, at the Annual Meeting held on December 19:—

The list of companies in which we have shareholdings remains unchanged.

Our largest shareholding is in Metal Manufactures Limited which, with its subsidiary, Austral Bronze Co. Pty. Ltd., constitutes the largest non-ferrous fabricating group in Australia, with factories in New South Wales, Victoria and Tasmania. The two companies are the biggest consumers of copper in the Commonwealth. For the last financial year production went on smoothly and at a high tonnage level, except for a three months' strike in the sheet rolling mill near Sydney. As in most industries, there has been of late a reduction in the flow of orders, coupled with cancellations and requests for deferred deliveries from which has followed some slowing down of activities.

Three private companies in which Metal Manufactures has approximately a half interest, manufacture various types of electric cables in New South Wales and Victoria. The works of the latest of these companies—British Australian Power Cables Pty. Ltd.—were opened at Port Kembla a few weeks ago for the manufacture of paper insulated power cables which have previously been imported.

Since the close of the financial year Metal Manufactures has made an issue of 450,000 ordinary shares at par. The Company's quota of 111,530 shares was taken up and to finance the purchase a loan of £100,000 was arranged with The National Mutual Life Association of Australasia Limited for a period of five years.

In respect of its 1951-52 year, Metal Manufactures has recently paid a dividend of 7 per cent. on both its preference and ordinary shares.

All the fertiliser companies in which we are interested have reported satisfactory trading results for the year ended 30th June last. The companies are proceeding in one way or another to meet the situation arising from the restriction on the importation of elemental sulphur. The majority of the companies are converting much of their sulphur-burning acid plants to the use of pyrites, to obtain their supplies of sulphuric acid.

Cuming Smith and Mount Lyell Farmers Fertilisers Limited, which operates in Western Australia, is the major partner in Albany Superphosphate Company Pty. Ltd. The new company is erecting a factory at Albany, Western Australia, to supply the superphosphate requirements of the southern part of Western Australia where pastoral development is proceeding rapidly. It is expected that the new factory will be in production in 1954.

Australian Fertilizers Limited had need of more capital to meet in part the expansion of its activities at Port Kembla and those of its subsidiary, A.C.F. & Shirleys Fertilizers Limited in Queensland, and the shares it issued during the year under review are now paid up to 15/- per share.

Australian Drillers Pty. Ltd. is now in liquidation and it is expected that the return to shareholders will be close to, if not 20/- per share. When it ceased operating we took over the drill and other equipment that was at Mount Lyell at the date of liquidation. We are now getting together our own drilling team, and as soon as this has been completed we propose to proceed with our own diamond drilling of which we have much still to do.

Mining and Treatment.

The main items in connection with the year's work are recorded, as usual, in the Directors' Report, so there is no need for me to go over the details. Noteworthy features were an increase in the scale of opencut operations and the highest output of blister copper for eight years, albeit the whole of the copper did not come from ore won during the year.

(Continued on next page)

THE MOUNT LYELL MINING & RAILWAY COMPANY LIMITED
(Contd.)—

The West Lyell opencut is our main source of ore supply, and it is essential that it should be brought to the required stage of development as quickly as possible. Last year's work helped to bring that position nearer. In accordance with the opencut programme decided upon at the opening of the year, greater attention was given to overburden removal and of the total of 2,607,901 tons of opencut material handled 1,204,045 tons were overburden, an increase of 155,232 tons over the previous year. The heavy equipment which has been put into use in the opencut over the last two years continues to give excellent service and has fulfilled its part in the expansion of opencut operations.

All operations in the treatment sections were satisfactorily carried on during the year. The ore supply to the mill was about 5 per cent. less than for the previous year, due in part to several periods of exceptionally wet weather which interfered with opencut operations and the transferring of ore from the mine to the mill. Notwithstanding that the average grade of ore treated was lower, the concentrate grade and recovery were approximately the same as for the previous year.

Coke supplies for the blast furnace were maintained throughout the year and it was not necessary to close the plant down at any time because of lack of coke. Much of the coke used was not altogether satisfactory for our work and in consequence the coke consumption per ton of copper remained high. In addition to the year's production of concentrates, 8,728 tons of stored concentrates were also smelted, and this, together with the tonnage treated at Port Kembla, reduced the stock from 20,398 tons at the opening of the year to 9,670 tons at its close.

At our meeting last year it was mentioned that several new metallurgical processes were receiving attention overseas and that developments in connection with them would be closely watched. One process, Fluo-Solids roasting followed by leaching, has given promising results and a proposal to erect a pilot plant to test the process on our own and another company's copper concentrate is being investigated by the technical staff of C.S.I.R.O. together with the metallurgical staffs of the two companies concerned. The potential saving in the cost of producing copper by the method is so great that close attention to it is fully justified.

In connection with our pyrites business, it is now expected that the new jetty and the installation thereon of the conveyor equipment will be completed by February next. Additional locomotives and trucks to increase the pyrites carrying capacity of the railway should be available soon after that time and with this equipment in use we should be in a position to increase our pyrites deliveries to at least 80,000 tons per annum for which there exists a demand on the mainland.

During the year Australia continued to be an importer of copper as demand was again in excess of local production. The heavy demand which has been characteristic of conditions for several years past has eased recently but we think only temporarily. Should this period of lower consumption persist it is reasonable to expect that imports will be reduced as required to meet the situation.

I would like to take the opportunity again of thanking the Tasmanian Government for its continued interest and help in our activities.

The Future.

The presence of overburden on the upper benches still hinders the extraction of ore on the lower benches, though I am pleased to say, this difficulty is not as serious as it was several years ago. For the current year it is again planned to remove overburden at the greatest possible rate consistent with the despatch of such quantity of ore to the mill as will provide a production of recoverable copper in concentrate of about 7,500 tons. Of late coke for smelting operations has been in good supply, and the indications are that over the whole year we should receive sufficient to smelt the year's production of concentrates and the balance of the stored concentrates as well. The copper from the latter would be additional to the 7,500 tons I have already mentioned.

Looking further ahead, the future development of the opencut has been under the close consideration of the Board and the Management over a long period. On different occasions you have been informed that senior technical officers of the Company have been abroad to investigate the latest development in mining and treatment methods, and also of heavy equipment put into use in the opencut. A study of the position in the light of information obtained overseas and of our experience over the last two years with heavy equipment has indicated the practicability of mining economically a larger proportion of overburden to ore than was considered possible a few years ago, with the result that the opencut can be taken to a deeper level than was originally contemplated. The effect of the deeper opencut will be an increase in the West Lyall ore reserve from the present 26,000,000 tons to over 40,000,000 tons and an improvement in the average grade from 0.68 per cent. to 0.70 per cent. copper. To open up this ore for extraction will require the removal over the years of 29,000,000 tons of overburden. The copper to be recovered will be extended by more than 50 per cent. and the life of the mine to not less than 22 years, even if no further orebodies are discovered in the meantime.

The development of the opencut over the last two years and the recent additions to the plant form part of the larger plan which I have just described and which was approved by the Board during the year. To fully develop the scheme the major items of additional heavy equipment needed are five churn drills, three 5-yd. shovels and twelve Euclid trucks and extensions to the mill equipment. Orders for some of these items were placed some time ago, and during the current year we are expecting to receive all the churn drills, two of the shovels and a number of trucks.

It is estimated that for the next three or four years the amour of copper mined will be not much greater than at present, but th in five years the amount will be stepped up to between 10,000 an 11,000 tons per annum. During these five years with the larg and more effective plant, the enlarged overburden removal pr gramme will be overtaken and the relative mining costs of ore wi be reduced.

During the year your Board has decided on a new and graduall expanding plan of prospecting the country around Mount Lyell an to this end two staff appointments have recently been made. Thes are an experienced mining geologist who will lead the prospectin team, and an experienced drilling engineer to develop a drillin team.

You will realise from what I have just said that since we la met, your Board has decided on a programme of development sut stantially greater than that envisaged this time last year, and or that will advance our place in the copper economy of Australi In view of the Empire discussions which have just taken place London this development of ours seems very much in line with th general desire of the Commonwealth and United Kingdom Goverr ments to foster the maximum production of raw materials, includ ing copper. We look forward with assurance to the continued wel being of the Company and to the future of Mount Lyell.

And that brings me to another important matter. Over the la two years the Company has received adequate financial assistanc from its bankers for its expenditure on plant in addition to th funds needed for the ordinary conduct of operations. It is no necessary for the indebtedness to the Bank to be reduced and t provide as well the finance needed for the completion of the schem These matters have been given the careful consideration of yo Directors and their proposals are to obtain part of the amour needed by way of loan from an outside source concerning whi negotiations are now proceeding; and also to raise further capit by an issue of shares. So that the Directors will be in a position t act promptly at an opportune time, a resolution will be propose at the conclusion of the ordinary business that the capital of th Company be increased from £2,500,000 to £5,000,000. More than tha I cannot say at this stage, but as soon as any arrangements hav been completed stockholders will be notified by circular giving pa ticulars of what it is proposed to do.

Vesta Battery Company Limited

Battery Manufacturers.

Reg. Office: Elizabeth and McEvoy St., Waterloo, N.S.W. **Directors** S. Airens (Chairman), A. R. Allen (Manag. Director), P. Lovet W. G. Tester. **Auditors:** E. S. & C. R. Kelynack.

24th Year ended June 30, 1952. Meeting December 4, 1952.

Turnover was again a record, being 20% higher than in th previous year, and profit rose by 40% to £58,336. Although n interim dividend was paid, the total dividend for the year wa maintained at 15%, absorbing £46,990 and reserves rose b £26,458.

"The new rubber separator will enable us to make a battery with a considerably longer service life than can be obtained from any battery now," stated the Chairman, Mr. S. Airens, at the Annual Meeting on December 4. His address reads:

The substantial increase in net profit and the maintaining of our past years' dividend rate should be gratifying to shareholders, particularly in view of the very many adverse company reports published recently. Our progress has been remarkably steady since the company became a public company in June, 1948, and to build up the reserves your Directors have pursued the policy of carrying forward an average of 20% of the net profit earned each year. The following figures demonstrate this progress:

	Net Profit after Tax	Income Tax Deducted	Amount Carried Forward	Dividends.
June 30, 1948	22,553	15,456	7,064	11%
June 30, 1949	35,557	22,900	18,226	15% plus 2½% bonus
June 30, 1950	39,579	18,000	31,698	15%
June 30, 1951	45,915	33,551	38,287	15%
June 30, 1952	58,754	51,753	49,633	15%

Our Markets.

The reason for our steady progress is because our business is primarily in the replacement field and is handled by our own branches through 8,000 garages in Australia and New Zealand—therefore it is not affected to any great extent by economic conditions. The governing factor is always the number of vehicles on the road—not the number of new cars sold.

You may be interested in some facts regarding the position of the motor industry today. Next to the United States of America, New Zealand has the highest number of car registrations in the world in relation to population—one vehicle for every six people. Australia follows with one vehicle for every eight people; the United Kingdom has one vehicle for every twelve people. The total number of motor vehicles registered in Australia last January was 1,523,000 units, and in New Zealand 436,082. Batteries fitted to these vehicles have a limited life, and to cater for our share of normal battery replacements and automotive electrical repair work our factories are now producing over 300,000 batteries per annum, nearly 3,000,000 feet of automotive cable, and £250,000 of ancillary equipment, such as battery chargers, tools, meters, testing equipment, etc.

As an indication of the relative position of the motor industry in Australia, retail sales of parts, vehicles, petrol, etc., have climbed from £117.7 million in 1948 to £334.7 million in the year ended June 30, 1951. The proportion of the total motor trade sales to the total retail sales of all descriptions has climbed from 12% to 30% in 1951. Today motor transport is Australia's major industry.

Our Products.

The company's policy has always been based on marketing only the highest quality. Today we have firmly established that reputation with the entire motor trade. During the year our chemists perfected a new formula incorporating a new ingredient called "VEROX." No doubt you have seen the press publicity on a test carried out under supervision recently, on the extraordinary starting capacity of the new Vesta Battery in which a battery connected to a Chevrolet car firstly cranked the engine continuously for ten minutes with the ignition switched off; immediately following, it started the engine 761 consecutive times in a period of one hour, then continued to crank the engine for a further 4.3/4 minutes before it showed any appreciable weakness. No other battery in Australia is capable of performing this test, and we have obtained several new government and other contracts due to our increased capacity and better performance.

During the year we have placed on the market a complete new range of batteries distributed through wholesalers under the trade name "DEFIANCE" which will considerably assist our turnover.

Subsidiary Company.

A great deal of developmental work in regard to a complete range of automotive cables has been carried out in Vesta Products Pty. Limited during the year, which should materially assist our future profits. The major project is the Vesta "KARLOOM" which is a manufactured wiring harness tailored to fit every make of car. By means of the "KARLOOM" anyone, without any specialised knowledge, can completely rewire a car. Our cables have been very well received by the trade—again due to their obviously high quality. Other new lines introduced include an electric hydrometer (which will infallibly indicate when a battery is likely to fail) and a plastic wind deflector for resale by garages.

Future Developments.

As indicated in the Annual Report we are installing plant and machinery to manufacture micro-porous latex, fibreglass reinforced separators, under our own registered trade names MIPOR and GLASTEX. The specialised automatic machines are now on the way from Sweden, and we hope to be in production early next year. This separator will be made under licence to Tudor Accumulator Company, Stockholm, and Revertex Limited, London.

The new rubber separator will enable us to make a battery with a considerably longer service life than can be obtained from any battery now. It has full government support, and is a most important development for defence purposes. Batteries for the armed services need to be made in a dry condition for long storage in ordnance stores. Previously, however, such batteries were assembled with moist wood separators and had to be put into service within a limited time; but storage or shelf life of a battery constructed with our micro-porous rubber separator is virtually unlimited. It is our intention to make these separators available to other battery manufacturers for defence contracts, and for export. They will be used in the de-luxe grade Vesta and Defiance Batteries for sale to the public. This is the first time in Australia that the manufacture of a synthetic separator has been attempted—previously such separators for specialised types of batteries had to be imported. The contracts with Sweden and England, together with our U.S.A. associates, complete our access to the exclusive use of future world developments in storage batteries.

You may have read the press reports of a fire which occurred in the Vitrox Container moulding department at our Waterloo factory in mid-November. Although this department will be out of production for six or seven weeks, let me assure you that our battery production will not in any way be affected. We are grateful to Century Storage Battery Company Limited, and Dunlop Rubber Australia Limited for their offers of containers until our own department is again producing. We are fully covered by fire and loss of profits insurance of course.

I wish to pay tribute to the loyal service and hard work given the company by its employees throughout Australia and New Zealand.

Our sales since June are again higher than for the same period last year, and your Directors look forward to the continued progress of the Company with every confidence.

Master Builders' Association of Victoria specified C.S.R. Floor Tiles!

C.S.R. Floor Tiles bring life-of-the-building beauty to any floor. Available in 17 marbelised colors. The base colors go right through the tile. Never wear out. You can create individual designs for even the smallest specification. Quickly laid over old floors without interruption to daily use. The cost for new buildings is usually much less than routine floor coverings. Remember them also for the floors of private homes—reminding potential owners that they will need no other floor coverings.

Swift Australia Co. (Pty.) Ltd. specified Cane-ite Acousti-Tiles for office of General Manager

They are used extensively throughout the rest of the building also, reducing all office noises as well as penetrating traffic noises by 65%.

This results in greater relaxation and hearing comfort. Increases the efficiency of any office, shop, restaurant or factory staff. Hospitals, schools and libraries particularly benefit by installing Cane-ite Acousti-Tile.

As quickly installed over existing ceilings and walls as in new construction—and without any interruption to business.

"Trustee companies operating in Victoria have been able to meet the increased costs by narrow margins only because of higher capital values of assets as a result of inflation," stated the Chairman, Mr. C. J. Ahern, at the Annual Meeting on December 11. He said:

The volume of business handled by the company during the year was, as mentioned in the Directors' Report, the highest in its history. Notifications of new appointments as well were satisfactory, and this is not only a matter for gratification but reassuring for the future business of the company.

Commission Rates.

I have many times in my annual address to shareholders made reference to the ratio of costs to commission earnings of Trustee Companies as disclosed in their accounts, but I am compelled this year to advert to the matter in an especial manner because of the effects of general economic conditions on the economics of the trustee industry in particular.

The charges of Trustee Companies are limited by law—that is, it is competent for the Board of Directors of each company to fix the rate of commission to be charged on the **capital** of an estate and on the **income** of an estate, but these rates must be within the limits imposed by Section 17 of the Trustee Companies Act. It follows, therefore, that the only tribunal to which the companies may appeal for an increase in the maximum commission rates is the Government and Parliament of the State. It was because of the serious effects of increased costs that representations were submitted to the Government early this year on behalf of all Trustee Companies operating in Victoria with a respectful request that the Statute be amended—

1. To permit an increase in the maximum rate of corpus commission which may be chargeable.
2. To incorporate provision for appropriate fees to be charged where a business is carried on by a Trustee Company.
3. To include other provisions relating to charges which modern conditions necessitate.
4. Some minor amendments of the law which the passage of time makes desirable.

The impression gained was that the Premier was favourably impressed by the factual case stated, although no official decision was announced, but it would seem that political developments in the meantime made it impracticable for the necessary amending legislation to be introduced to Parliament if this was intended.

Legislation in Other States.

It is significant that in the States of New South Wales and Queensland, legislative relief was during this year sponsored by the respective Governments of those States and, receiving the assent of Parliament, is now law. In both these States the statutory maximum rate of corpus commission permissible was increased and the new rates of commission adopted by the companies operating in those States increased charges from 2½% (the rate in Victoria) to 3¼% on estates of a capital value of up to £25,000, 3% on the next £25,000, 2% on the next £50,000 and thence 1%. In the State of South Australia the Statute already provided for a maximum rate of 5% on the capital value of assets committed to the care of the Trustee Company and the companies there increased their charge similarly to New South Wales and Queensland except as to the first £25,000 on which 3½% was fixed. In West Australia some relief has been granted by Parliament to the companies, and in Tasmania it is hoped amending legislation will have the consideration of the Government shortly.

Net Earning Rate.

Trustee Companies operating in Victoria have been able to meet the increased costs by narrow margins only because of higher capital values of assets as a result of inflation, but costs now are out of harmony with the capital values upon which corpus commissions are calculated, more particularly since the dramatic fall in share values on the Stock Exchange and the less dramatic but substantial easing of values in real estate coming into the hands of the companies. Even an early stabilising of costs will give little relief in this respect because there has been no relevant adjustment of commission rates to the current situation. Whilst the influence of the capital factors mentioned is not yet being fully reflected in profit and loss accounts, current costs apply to the administration of assets which came into the hands of the company many years ago when now prevailing price levels could not possibly have been foreseen. An investigation of the published accounts of all the companies operating in Victoria showed that total gross income from commission, investments and other sources increased between 1939 and 1951 by 97.7%, whilst their total operating expenses in the same period increased by 117.6%. The operating expenses of the Victorian companies in 1951 absorbed 93.5% of gross income as compared with 85% in 1939, whilst the total net profit of the Victorian companies declined by 14.8%, that is, from £51,700 in 1939 to £44,000 in 1951. The earning rate on total shareholders' funds, 5.1% in 1939, reduced to 4% in 1951. It is interesting to contrast this with the earning rate of shareholders' funds of all companies in Australia as returned in the Commonwealth Statistical Bulletin in January, 1952, which rose from 6.8% in 1939 to 9.2% in 1951.

The fact is that an epoch has been reached. Every professional and service function in the community has had to adjust fees to the changed economic realities of 1952 and the prospect of early stability in costs so ardently sought as the objective of national economic policy makes it not only just but indeed imperative that relief be granted by Parliament to the companies. I emphasise that the factors which enabled the higher costs to be carried as I pointed out earlier have moderated, indeed have already largely disappeared.

The stability and integrity of the Trustee Companies as well as their efficient functioning are of great importance in the community. The nature of their responsibilities precludes them from making swift adjustments to economic changes as industrial and commercial undertakings may. Their fiduciary obligations once assumed must be performed. Competent staffs must be trained and retained. I know that I voice the unanimous viewpoint of all the companies when I state these facts, and I earnestly hope that before the next annual meeting the matter will have had favourable consideration by the Government of the day.

Remuneration for "Carrying On" a Business.

This is not the appropriate place to elaborate the other headings of matters which were the subject of the representations mentioned, but it is a serious defect in the Statute which is the charter of the Trustee Companies that there is no specific provision for remuneration for responsibility, pains and trouble of a company where a business is carried on. It is obvious that the standard basis of charges on investments—that is a rate of commission on the capital assets be they shares, real estate or other securities and a commission on the income of such investments, is not an appropriate one for this service, the nature of which varies so greatly according to the particular business. This Statute was

(Continued on next page).

NATIONAL TRUSTEES EXECUTORS & AGENCY COMPANY OF AUSTRALASIA LIMITED (Contd.)— enacted about three-quarters of a century ago, since when the structure of modern business has changed radically. The Government of New South Wales in the amending legislation which increased the maximum rate of commission mentioned above has remedied the defect in that State by enacting a provision similar to that which has long been the law in Queensland. The Victorian companies have asked for a provision similar to that already granted to the Public Trustee of this State, and it is hoped that the Government will also rationalise the law here.

Staff.

Trusteeship today is a complex task of management, and desire to repeat what I have had the pleasure of saying on pr vious occasions—it is a matter of considerabe satisfaction to th Board of Directors, and I am sure to all shareholders that th work of this company has been conducted in such a meritorio manner by responsible officers. They have shown goodwill an loyalty in the difficult circumstances of the times, which is great appreciated by the Board of Directors.

Robert Reid & Co. Ltd.

Wholesale Softgoods Merchants.

Reg. Office: 341 Flinders Lane, Melb. **'Phone:** MU 8871. **Directors:** J. S. Cockshaw (Chairman and Manag. Director), Robert Reid, M.C., S. Harry Rye, M. E. Bates, P. T. Kelynack, E. J. Dunn, N. J. Broadbent, R. H. Brown, S. W. G. Warren, B. G. Brett. **Auditors:** Fuller, King & Co.

Year ended July 19, 1952. Meeting December 11, 1952.

Due to the recession in textiles, turnover fell by 10% and accumulated stocks had to be written down by £176,874 at balance date. A loss of £35,991 was sustained but a reduced dividend of 6% was paid out of accumulated profits after transferring £125,000 from stock valuation reserve.

Although lower than last year, reserves are still substantial at £1,389,488 and exceed share capital.

As wholesale softgoods merchants, the company has an Australia-wide selling organisation. It is also interested in a chain of 22 retail drapery stores in New South Wales, Victoria and South Australia, operated by a subsidiary, Hustlers Pty. Ltd.

Since balance date, there has been a substantial reduction in stock and overdrafts, as detailed in the accompanying Chairman's Address.

Net tangible asset backing (book values in consolidated balance-sheet)—£2/1/10 for each £1 ord. share.

"The company's consolidated position is very sound—of the total shareholders' funds, no less than 83.2% is represented by net current assets," stated the Chairman, Mr. J. S. Cockshaw, at the Annual Meeting on December 11. His address reads:

You have already been informed of the death of Mr. Spooner, whose passing was a severe blow to the company. He was reappointed to the Board only last year, and his death was not only a loss to this company but to the business world in general.

Trade and Stocks.

As advised in the Report of Directors, during the year under review the company, in common with others, experienced a recession in trade. At last year's meeting I indicated that the freezing order introduced in July, 1951, in New South Wales (which lasted for three months) and the Commonwealth Government's determination to attack the inflationary trend by general restrictions on credit, would have an effect upon the operations of the year then current. I also indicated that the fall in the price of wool would be immediately reflected right through the whole of the economic affairs of the country. Unfortunately, that forecast has proven to be correct. The factors just mentioned, allied with last summer's disastrous drought and bushfires in Queensland, and with loss of employment consequent upon the Federal Government's import restrictions, had a serious impact on trade which resulted in a decrease in turnover of 10% compared with that of 1951. This decrease and the sudden influx of imported goods, accelerated by the recession in other export markets, which resulted in the imposition of import restrictions, coupled with heavy cancellations of orders placed by our customers, caused stocks carried by the company to rise to an exceptionally high level. I would emphasise that our orders placed overseas were no more than the quantity necessary to cover orders already received from our customers in Australia. These stocks have been financed by the fullest use of all available liquid funds, plus a resort to banking accommodation to a much greater extent than ever before in the history of the company. The drop in price of wool and in replacement cost of other lines, caused stock on hand at balance date to be written down to the then current market values, the total writing down amounting to £176,874, as advised in the report of Directors. The Directors feel that this prompt writing down of current stocks is the best policy and has already justified itself in the preservation of this company's still considerable trade.

Profit Margins and Expenses.

As no doubt you are aware, Price Control on merchandise distributed by our company has been abandoned in four States. It is still retained in Queensland, but the margins allowed in that State are such that the stage has been reached where it is not possible to trade profitably. In other States, owing to present conditions, it has not been possible to gain any advantage through the relaxation of controls—in fact, in some cases, margins have had to be lowered to effect sales. In past years, I have stressed the rising

(Continued on next page)

xpense rate. All cost-of-living increases in wages, and increases overhead charges, have to be borne by the Company; up to date ey are not recoverable by inclusion in selling prices of our goods.

Stocks and bank overdrafts are being steadily brought down, nd your Directors assure you that strict control is being exersed over finances, and that all possible ways of reducing trading nd administration expenses are being explored and put into effect. nce balance date, 19th July last, stock and bank overdrafts have ntinued their downward trend, and as at the 30th November, 1952. ey have been reduced by a further £1,068,560 and £843,417 reectively.

Shareholders' Funds.

From the accounts, no doubt you will have noted the decrease Shareholders' Funds during the year. The decrease of £113,851 the accounts of the parent company is reduced to £77,798 by rofits made in the subsidiary company. We would draw your attntion to the fact that the greater of these decreases, £113,851, is uch below the amount by which it was necessary to write down tocks. However, I think shareholders will agree that the comany's consolidated position as disclosed by the accounts is very ound—of total Shareholders' Funds of £2,608,238, no less than 3.2% or £2,169,720 is represented by net current assets.

Reserves and Dividends Policy.

In past years the Directors have been subjected to some criticism for their conservative dividend policy, when profits have aparently been such as to warrant a higher rate of return to shareolders. The ever-increasing cost of replacement stocks and the sks inherent in the textile trade have demanded the retention of proportion of profits, and the substantial additions to reserves recent years have been in pursuance of the policy adopted by hareholders in 1941, namely:

(i) The necessity of stabilising and preserving the company's capital.
(ii) The building of reserves to take care of fluctuation of current asset values, and
(iii) Continuity of dividend payments.

The prudence of accumulating reserves by retention of profits nd the conservative dividend policy in the past has now been fully justified by present conditions, and has enabled the Board to recommend to you the payment of a dividend of 6%, despite the loss for the year.

Overseas Visit.

During the year I again visited England for the purpose of investigating the possibilities of improving our buying facilities in that country and on the Continent, and to maintain contact with our suppliers overseas. Unfortunately, I was there when the first impact of the Commonwealth Government's import restrictions was being felt, and representatives of Australian firms were not very kindly received. The association with many of these suppliers goes back, in some cases, to the early years of the company's foundation, and the abrupt severance of the existing conditions brought about many cases of hardship, which still exist. The company has submitted to the authorities in Australia for consideration all cases affected by import restrictions.

The visit of the Prime Minister to England immediately following the Government's declaration proved to be very timely, and at Manchester and London the need for the legislation was lucidly explained—this being a gesture very greatly appreciated by those who heard him. Subsequently they received copies of his exposition on behalf of Australia. His explanations did much to ease the tension and hostility existing, and his promise to assist at a later date in a protection of the contracts affected by the legislation is still to be implemented some time in the future; probably by the issue of special licence as it is found possible to absorb the goods covered by these contracts, at the then current prices. It is inevitable that some time will elapse before the Government enactments will allow a free flow of the usual productions in the market and finance the payment of heavy purchases; meantime, Australian financial restrictions are preventing convertability of goods back to cash at the rate normally achieved. However, before I left, the position was materially improved, and I can assure you that when it is possible to return to free imports, we shall be able to obtain our requirements from our regular suppliers overseas. It is important, however, to note that 63% of our purchases in the year under review were obtained from Australian sources.

Appreciation.

We wish to thank the whole of the executive and staff of our company for the support they have given us in the difficult times through which we are passing.

Standard Cars Limited

(Now Standard Motor Products Ltd.)

The following address was delivered by the Chairman, Mr. A. F. Crosby, at the Annual Meeting on November 7:—

I would advise that of the 3,117 shareholders of this company on August 20 last, 3,047—that is 97.7%—have now given their approval of your Directors' recommendations and have agreed to the exchange of their shares in this company for similar shares in The Standard Motor Products Ltd. This splendid response has been most gratifying to all concerned. Although the advantages which the company has gained as the result of the new arrangements have already been explained to shareholders in the circular of August 20 last, I feel it would not be out of place to make brief reference to them on this occasion also. In place of the rights of distribution throughout Australia coming to us indirecly through our half interest in The Standard Motor Co. (Australia) Ltd., we now have in the new company the exclusive Australian rights of manufacture and distribution of Standard and Triumph cars for a period of twenty-five years. In addition, we have, through the allotment to the English Company of shares of a nominal value of £5,000, an undertaking by them to supply all the necessary technical data and assistance so essential to the fulfilment of our manufacturing plans. Our Victorian and New South Wales distributing arrangements with Harry Ferguson Ltd. remain unaffected and we have reason to anticipate the completion, in the near future, of a satisfactory agreement regarding manufacturing rights for the Ferguson tractor in Australia.

In addition to these advantages the strengthening of the ties between the English Companies and ourselves cannot help but bring about a greater degree of co-operation between us which we all know is essential if we are to adequately cater for the Australian market. We look forward to the future confident in the knowledge that the interest of our English partners has never been greater. Finally, I want to make it clear that the arrangements completed by me in England have the unanimous support of your Directors and do not in any way involve any sacrifice, other than some sharing in the profits of distribution, or any surrender of control of the company by the present shareholders and Directors.

Consolidated Accounts.

I think it is fitting on this special occasion that I should be able to present figures which compare so favourably with those of previous years. Turnover of £14,821,740 was once again a record, and the growth of your company in this regard can be gauged by comparing this figure with the annual turnover of £4,500,000 three years ago and with the 1951 figure of £12,107,726.

Deliveries of cars last year did not quite reach the previous year's record figure, but the difference was more than made up by increased deliveries of Ferguson tractors, actual figures in this regard being—cars delivered 8,779, compared with 9,122 in 1951, and tractors 5,814 compared with 4,121 in 1951, making a total of 14,593 units last year as against 13,243 for the previous year.

Deliveries of farm implements totalled 18,155, an all-time record. The growth in this department of the company's business not only follows the greatest number of tractors delivered, but also reflects the success of many new lines added to the already well-established ones.

Profits.

Due to increased costs and expenses, and in line with many enterprises in Australia, neither gross nor net profit have kept pace with the increased turnover, but nevertheless, I am sure shareholders will consider the consolidated net trading profit of £715,604 satisfactory.

Once again the inevitable provision for taxation, on this occasion amounting to £443,252, absorbs the greater part of this amount. This leaves £272,352 to be added to the balance of £752,258 brought forward in Appropriation Account.

After adding the profit made on the sale of certain assets, income from investments and the writing back of taxation provision in excess of requirements, there remains to the credit of the Appropriation Account the considerable sum of £1,162,752 available for dividends and like purposes.

I feel that I should draw special attention to this figure because it reflects the result of the dividend policy of your Board which has made possible the financing of much of the company's expansion through the retention of profits in the business. These funds have been most useful in tiding us over the more difficult times through which the company has been passing, and have enabled us to carry unusually large stocks without curtailing our policy of building up essential fixed assets.

Balance Sheet.

It will be seen from the Balance Sheet that fixed assets have increased from £451,323 to £673,671. This is mainly due to the cost of alterations and improvements to the Melbourne Head Office buildings and the purchase of additional premises in South Melbourne and Sydney.

Current assets have increased to £3,482,747 mainly due to the unusually large stocks held on balancing day. These, however, have been very considerably reduced since that time and the current assets figure now more nearly approximates the figure of £2,222,884 as at June 30, 1951.

The investments total shows a reduction of £129,934 resulting from the sale of Commonwealth Bonds, less a further investment in The Standard Motor Co. (Aust.) Ltd. of £100,000.

On the other hand current liabilities have, of course, increased considerably, and at the close of the year stood at £2,516,006. This figure has likewise been substantially reduced since that time.

Asset Backing.

After making provision for preference and ordinary dividends for the year, the company's 5/- ordinary stock units now have an asset backing of £1/7/2, and in considering this figure I would like to assure shareholders that the assets supporting the figure are in every instance conservatively valued.

Subsidiary Companies.

Our company's two subsidiaries, and also The Standard Motor Co. (Aust.) Ltd., in which we had as at June 30 last a half interest, made considerable progress during the year, and your Directors consider the result of their operations, bearing in mind the stage of their development, to be satisfactory.

Directorate.

Apart from the progress made by the company as disclosed by the Accounts, improvements in our organisation should also, I feel, be mentioned. During the year your Directors were pleased to welcome to the Board Mr. T. J. Ryan, who has for many years been the Chief Sales Executive of the company, and we also appointed Mr. J. D. Glover an Associate Director.

Overseas Visits

In conformity with our long-established policy several representatives of the company paid visits to the factory and headquarters of The Standard Motor Company Ltd. and Harry Ferguson Ltd. at Coventry. These visits are of great value to your company and to the persons concerned, and this year were made by our Governing Director, Mr. C. C. Crosby, who was accompanied by Mr. Ryan and also by myself. At the present time our Managing Director, Mr. Walter Turner, is in England, principally on Ferguson business, and he is accompanied by Mr. J. D. Glover. On the manufacturing side, the General Manager and Director of The Standard Motor Co. (Aust.) Ltd., Mr. K. A. Horner, has recently completed a visit during which he obtained much information essential to the development of our manufacturing plans.

Visit of Sir John Black.

The highlight of the year was undoubtedly the successful but all-too-brief visit of Sir John Black, the Deputy Chairman and Managing Director of The Standard Motor Company Ltd., England, to this country in March last, during which he saw, and was, we know, impressed by the extent not only of your company's enterprises but also Australia's industrial development generally. Sir John Black's interest is now a much more personal one, and my recent talks with him made it very clear to me that one of the company's most valuable assets not shown in our Balance Sheet is his interest in our future. We have already, apart from the benefits of the new company arrangements, evidence of this interest in the arrangements made whilst I was in England for Mr. W. J. R. Warren, the General Sales Manager of the English Company, to visit us in the coming year. Great advantages will accrue from this visit, and we attach great importance to the need for our English friends to gain first-hand knowledge of the requirements of this market. It was also our privilege and pleasure earlier this year to co-operate with Messrs. Harry Ferguson of Australia Limited in making a success of the visit of Mr. E. W. Young, Sales Director of Harry Ferguson Limited, England, and here again from talks I had in England with Mr. Young I am confident that his visit was a most informative one.

Future Plans.

Perhaps at this stage some statement of policy regarding our manufacturing plans would not be out of place. For several reasons well known to you, your Directors are of the opinion that the time is ripe for us to expand and expedite the course we have followed for many years of building up the Australian content of the several products which the company markets. Naturally this will require considerable expansion of present buildings, plant and equipment, and in planning these we must, in addition to other factors, consider the important question of finance. I would assure you that every aspect of any expansion contemplated, whether it be for partial or complete manufacture of cars or tractors, is being most carefully investigated and will not be embarked upon until we are satisfied that it is economically sound and desirable in every respect.

I would further say in this regard that it is the intention of your Directors to utilise to the fullest extent possible manufacturing facilities already existing in this country or being established here, rather than set up our own plants for the manufacture of parts or equipment requiring specialised machinery and experience and which, if used for our own purposes only, would not be fully employed and would therefore be uneconomic.

(Continued on next page)

TANDARD CARS LIMITED (Contd.)—

I am sure shareholders will realise that it would be unwise for e to give them so soon after the formation of The Standard Motor roducts Limited, and before the new Board has had an opportunity discussing our plans, any more details of the proposals than I ve already given.

It has already been announced that Sir John Black has consented his appointment as President of the new company and Mr. A. S. ck, the Deputy Managing Director of the English Company, is so a Director, and both have the right under the Articles of Asciation to appoint representatives to act for them in Australia. have this morning received a cable from England advising these ppointments, and it is with great pleasure that I announce, on half of the Board, that Sir John Black has appointed Sir Norman artin his representative in Australia, and Mr. A. S. Dick has apinted Mr. Herbert Taylor of the firm of Messrs. Young & Outhaite, his representative in Australia. The Board gives a sincere elcome to these two very busy gentlemen, who are so well known many of you, and thanks them for accepting appointment and for aking time available to assist the company in its problems.

The English Company, as you are aware, now holds 350,000 Ordinary Stock Units in The Standard Motor Products Limited, and therefore I am sure you will appreciate our desire to make it possible for the representation of that shareholding to participate from the beginning in all important discussions affecting the future development of the company.

Staff.

To return to the more normal procedure of an Annual General Meeting, I would as usual make reference to the splendid work done by your company's Executive Management and staff generally. The financial year, particularly the second half of that period, was a difficult one for every member of the organisation, and your Directors had to call for a maximum effort from the staff, particularly the senior members, and on every occasion this met with ready response. The advent of the new company will make necessary considerable re-organisation of our whole business, and in the selecting of the many senior officers of the new organisation, first consideration will be given to present members of our staff, especially those who have given long and faithful service to the company.

The group's main activities are the production of alums, iefly used by the paper manufacturing and textile industries id for water purification; also the design, manufacture and inallation of water purification plants. Directors report a arked expansion of demand for chemical products during the ear, arising out of the plans to double the capacity of the ustralian paper and board industry. Output was a record in oth the chemical and engineering sections. Sales of paper um and alums have fallen in the six months since June, but hedules of requirements received call for increased producon in the second half of the year.

Plans for a new factory at Brookwood have been modified, id the first stage is expected to commence production in anuary, 1953.

In addressing shareholders at the Annual Meeting on November 7, the Chairman, Mr. R. McInnes, outlined the activities of the ompany and its subsidiaries. His address reads:—

The net profit of the parent company and its subsidiaries for he year ended June 30, 1952, was £27,246, as against £14,938 for he previous year.

This profit has been struck after making provision of £23,279 or taxation as against £13,100 for the previous year. An amount of £7,482 has been provided for depreciation, against £11,484 for the previous year. This decreased provision has been due to the elimination by the present Government of the special initial depreciation which was allowed on plant under the Income Tax Act.

The removal of the depreciation allowance is manifestly unfair to basic industries such as those in which we are engaged. Firstly, the rationing of electric power supply by the State Electricity Commission forced us to instal expensive auxiliary power plants to

(Continued on next page).

SULPHATES LIMITED (Contd.)—
prevent dislocation in the production of our special chemicals which are essential for municipal and other water purification plants, and also for the nationally important paper and pulp industry. Secondly, many items of production plant ordered a considerable time ago were not delivered to schedule, and became subject to upward price adjustment. Surely, the special depreciation was meant to cover such conditions as these, and its peremptory withdrawal by the Commonwealth Government is unjust to expanding Australian manufacturing industries.

The foregoing comments explain the larger provision of £6,177 for taxation and depreciation as set out in the Directors' Report.

In addition to this larger provision, an amount of £1,518 has been set aside in the accounts against loss on sale of Commonwealth Bonds previously held by your company.

Thus, after making all the additional charges against revenue, the net profit for the year was £27,246.

The disbursement of this amount as provided in the accounts is as follows:—

Dividends to Shareholders of Sulphates Limited ..	£20,604
Writing off of balance of new issue expenses	2,000
Transfers to General Reserves	3,500
Addition to accumulated Profit and Loss Account .. (Note: This now stands at £13,437.)	1,100
Profits applicable to interests of outside shareholders	42
	£27,246

The Chemical Industry

The output of all our chemical products from the rehabilitated Yarraville factory for the year under review was a record; as also were our sales, which was in accordance with our forecast to you. For the first six months of the current financial year, sales of paper alum and alums have fallen. However, schedules of requirements received will call for increased production in the second half of the year.

The construction programme at Brookwood is being carried out in three stages. The first stage covers the development of the site entailing fencing, roadways, drainage, power supply, construction and maintenance workshop facilities, office and stores buildings, and the reconstruction and erection of ore processing plant comprising primary crushing, rotary calcining kiln, and fine pulverising equipment. The first stage is now approaching completion and is scheduled to be in production in January, 1953. Already Bauxite from our Gippsland deposits is being delivered by rail truck to the siding at our Brookwood factory, thus saving the additional cost of road cartage from the Yarraville railhead.

The second stage comprises the erection of the continuous production equipment for the manufacture of filter alum and paper alum. Detailed designs, except for relatively minor points, are completed. Delivery of certain equipment ordered some time ago is still awaited, and erection of this plant will follow on the completion of the first stage.

The third stage will be the erection of buildings and chemical production equipment for the manufacture of aluminium sulphate and potash and ammonium alum. No time schedule has yet been adopted for this part of the project, and, in the meantime, the manufacture of these chemicals will continue to be carried out at our Yarraville Factory.

Bauxite

During the year, reports have appeared in the Press from time to time referring to discoveries of bauxite in the Northern Territory. However, no deposits of bauxite in Australia, or the adjacent territory, have been discovered which compare with the high grade bauxite deposits of proved quality and quantity, which are being worked by your company. A further great advantage of the Gippsland deposits is their accessibility to existing rail transport and their relative proximity to treatment facilities.

The Engineering Industry

The output of this subsidiary, Filtration & Water Softening Pty. Ltd., from its Fitzroy Works has also been a record.

The outlook for the current year is good. Orders already in hand are adequate to maintain the turnover volume for this year. This volume could indeed be increased except that temporary adverse financial conditions may delay the completion of some contracts.

I should perhaps add some remarks to those in the Directors' Report on the Springvale project. Additional finance will be required for the completion of this Engineering Works. Substantial savings in capital costs can be made by using Australian galvanised iron and steel and Victorian cement, materials which are becoming now more readily available. It is hoped that consent will be given to use these materials in industrial projects in this State. Our extension into certain other heavy engineering activities under consideration is dependent on orders from Government and semi-Government bodies, which, in view of the present financial stringency, are unlikely to be forthcoming during this financial year. Consequently, the Directors consider it wise to proceed with caution on this project.

To my co-Directors, our executive officers, the production, development and design staffs of both Sulphates Limited and Filtration & Water Softening Pty. Ltd., our employees at our chemical factories and our engineering works, and the central office staff I extend my deep appreciation and thanks for their work which has resulted in such a successful year for your company.

Net tangible asset backing (book values in consolidated balance-sheet)—Pref., £4/8/8; ord., £1/0/10.

Smith Bros. (Timber Merchants) Ltd.

"Turnover, gross and net profits for the year were all-time cords," stated the Chairman, Mr. J. T. Tomasetti, at the Annual eeting on December 10. His address reads:

Turnover, gross and net profits for the year were all-time cords. The net profit figure at £54,017 exceeds that for the pre- ous twelve months by approximately £5,500. This year's figure as determined after providing £11,905 for depreciation and amor- sation, against £16,204 in 1951. Provision for taxation in respect the year's profit is £21,400 (1951, £19,790).

The manner in which the net profit and reserves have been alt with is set out in the accounts submitted.

Finance.

As to the company's finances, some improvement in the liquid sition has been gained for the twelve months. Current assets and, at 30th June last, at £297,655 against current liabilities, 75,431. Stocks on hand increased by £95,419 when compared with th June, 1951. This increase follows the heavy arrivals of im- rted timbers ordered months earlier. The advance in stock values s been financed by bank overdraft, which is £93,822 greater than th June, 1951.

In common with many companies dependent in some degree on imported goods, our position in respect of our heavier-than- ual stocks is being carefully watched. Overseas prices have llen, but on account of reduced imports possible under existing nport Licensing Regulations, we expect not to incur undue loss such stocks.

Arising from the year's operations, there is nothing of excep- nal consequence to report. Operations have been conducted satis- ctorily at all locations. Replacement and maintenance have been ntinued as a matter of course.

South Yarra.

A sprinkler system hs been installed at our South Yarra works a cost of approximately £8,000. This has the effect of reducing r insurance premiums, which are always a heavy charge.

A useful Ash area was purchased at Woorarra. Gippsland, and gging therefrom is proceeding. Benefits from this development ll shortly be felt.

Tasmania.

An additional forestry lease has been acquired at Lake Leake, d its acquisition will add to the life of our operations there.

Orbost.

Has suffered through extremely unfavourable weather, and we e not yet working the new forest area reported as having been anted last year.

Taxation.

The incidence of taxation continues to be an exceptionally avy burden. Particularly in the industry in which we are en- ged, renewal and replacement of machinery and transport equip- ent involves heavy expenditure. We had hopes that the Govern- ent, apart from a general alteration in Company Tax Rates. ould this year concede something by way of special depreciation, hich we claim should apply to companies engaged in essential industries. Failure to do so is greatly regretted and cancels sav- ings we are entitled to anticipate. The Government fails to recog- nise that when taxation is applied on a scale at penalty levels, enterprise is strangled. Higher production is said to be the solu- tion of our economic difficulties, but this will not be achieved un- less some of the rewards are retained by those fostering it. In determining its taxing programme this year, the Government ig- nored this fundamental principle. Adding income tax at company rates to payroll tax and an assumed amount which shareholders will pay on the dividends they receive, we find that not less than 12/6 of every £ of net profit earned by the company goes to the tax master.

Prospects.

Referring now to the present and to future prospects, your Directors report that some reduction in turnover has been ex- perienced since the end of last June. An upward trend, however, deveoped in October last, and if this continues we may expect the current year to result satisfactorily, though it may not reach the record figures of 1951/52.

Change in Name of Company.

It is our intention to submit to you as special business an extraordinary resolution, "That the name of the company be changed to Smith Bros. (Timber Merchants) Limited," it being our opinion that we should take advantage of the goodwill attached to the name of Smith Bros., who have been established as Timber Mer- chants for many years.

At a later date it is intended to make the following changes to the names of the subsidiary companies:

Smith Bros. Pty. Ltd. to become Smith Bros. (South Yarra) Pty. Ltd.
Butterfield Pty. Ltd. to become Smith Bros. (Brooklyn & Or- bost) Pty. Ltd.
Butterfield & Smith (Tas.) Pty. Ltd. to become Smith Bros. (Tasmania) Pty. Ltd.
The Junction Joinery & Timber Mills Pty. Ltd. to become Smith Bros. (Footscray) Pty. Ltd.

It will be seen that with the alteration in the name of the Holding Company and those of the subsidiaries, the organisation will become easier to administer, with less confusion to the trade generally.

Dividends.

Payment of the following final dividends in respect of the year ended 30th June, 1952, is now recommended:

(a) 4% on 165,000 Ordinary shares, making 8% for the year (4% representing the interim dividend, was paid out of tax-paid funds).
(b) 2½% on 50,000 Preference, making 5% for the year.

The reduction of 2% in the Ordinary dividend for the year as compared with 10% for 1951 is recommended because your Direc- tors recognise the importance of building reserves, especially in a period when the future is more difficult to estimate than it appeared a year ago. We feel that shareholders will support this viewpoint.

Jason Investment Co. (Australia) Ltd.

g. Office: 375 Collins St., Melb. **'Phone:** MU 5392. **Directors:** S. Ricketson (Chairman) G. G. Jobbins, Col. A. Spowers, D.S.O., M.C., Col. F. H. Wright, O.B.E., V.D. **Auditors:** Flack & Flack.

5th Year ended September 30, 1952. Meeting December 11, 1952.

Earnings were steady at £25,645 and dividend of 5½% was aintained.

WORMALD BROTHERS SYSTEMS

—for protection against FIRE!

To kill fire effectively, each type of fire requires a different extinguishing technique

"Simplex" and "Kidde" ("Lux") Fire Extinguishers are self-contained units, ruggedly constructed, foolproof. *Each does a specific job.* At your office, factory, engineering shop, warehouse or store—on farm or station—in your car, truck or yacht—they're always ready for instant, positive action in an emergency.

"Simplex" and "Kidde" Fire Extinguishers are approved by all Government Departments, and used by the Navy, Army and Air Force.

A "SIMPLEX" OR "KIDDE" FOR EVERY TYPE OF FIRE RISK

(A) *"Simplex" Auto Type Carbon Tetrachloride (CTC). Capacity: 1 quart. For motor lorries and cars, lift motor rooms, small electrical switchboards and other electrical risks.*

(B) *"Simplex" Stored Pressure Carbon Tetrachloride (CTC) Type. 1-gallon capacity. For large electrical installations, telephone exchanges and similar risks.*

(C) *"Simplex" Foam Type, 2-gallon capacity. Specified for all highly inflammable liquids and materials when, in case of fire, a blanketing effect is desired.*

(D) *"Simplex" Soda Acid Type. 2-gallon capacity. For all general fire protection purposes. Install in offices, factories, hotels, halls, farm buildings, theatres, homes.*

(E) *"Kidde" (Hand) Carbon Dioxide Gas (CO_2) Type, 12-lb. capacity. Has no damaging after-effects. Particularly specified for protection of switchboards, electrical motors and apparatus, and certain inflammable hazards.*

"SIMPLEX" and "KIDDE"

(Previously known as "LUX")

Copper	285	2,619	2,658

MT. ISA MINES LTD.—

	Jan. 1953.	Dec. 1952.	Nov. 1952.	Oct. 1952.	Jan. 1952.
Dry tons milled	50,730	50,225	54,220	56,040	52,330
Bullion produced	3,225	3,070	3,090	3,420	3,075
Zinc concentrates produced	3,424	3,496	3,906	4,081	3,965

NEW BROKEN HILL CONSOLIDATED LTD.—

Six weeks ended February 14, 1953.

Ore Treated—32,277 tons—assaying: 9.1% lead; 1.8 ozs. silve 12.0% zinc.

Lead Concentrate Produced—3,680 tons—containing: 2,666 tons coverable lead; 52,752 ozs. silver.

Zinc Concentrates Produced—6,872 tons—assaying: 52.1% (3,5 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zi concentrate produced during the current financial year (1/1/53 14/2/53), compared with the same period last year—

	Lead Concentrate. Lead.	Lead Concentrate. Silver.	Zinc Concentra Zinc.
1953 (6 weeks)	2,666 tons	52,752 ozs.	3,580 tons
1952 (6 weeks)	1,107 tons	24,450 ozs.	1,790 tons

NORTH BROKEN HILL LTD.—

Five weeks ended February 7, 1953.

Crude Ore Treated—25,087 tons—assaying: 13.3% lead; 6.9 ozs. s ver; 10.9% zinc.

Lead Concentrate Produced—4,483 tons—assaying: 71.8% (3,2 tons) lead; 35.3 ozs. (158,190 ozs.) silver; 4.7% zinc.

Zinc Concentrates Produced—4,811 tons—assaying: 0.9% lead; ozs. silver; 50.1% (2,410 tons) zinc.

Lead and silver contents in lead concentrate and zinc in zi concentrate produced during the current financial year (1/7/52 7/2/53), compared with the same period last year—

	Lead Concentrate. Lead.	Lead Concentrate. Silver.	Zinc Concentra Zinc.
1952/53 (31 weeks)	26,988 tons	1,319,659 ozs.	19,398 tons
1951/52 (32 weeks)	25,483 tons	1,233,440 ozs.	18,481 tons

THE ZINC CORPORATION LTD.—

Six weeks ended February 14, 1953.

Ore Treated—47,253 tons—assaying: 14.8% lead; 3.3 ozs. silv 11.6% zinc.

Lead Concentrates Produced—8,882 tons—containing: 6,506 tons coverable lead; 149,389 ozs. silver.

Zinc Concentrates Produced—9,454 tons—assaying: 52.3% (4,9 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc zinc concentrate produced during the current financial year (1/1, to 14/2/53), compared with the same period last year—

	Lead Concentrate. Lead.	Lead Concentrate. Silver.	Zinc Concentra Zinc.
1953 (6 weeks)	6,506 tons	149,389 ozs.	4,945 tons
1952 (6 weeks)	3,377 tons	81,363 ozs.	2,676 tons

The STOCK EXCHANGE

OFFICIAL RECORD

Vol. 46 MARCH, 1953 No. 3
(Issued at Melbourne, April 8, 1953.)

Commonwealth £77,000,000 Cash and Conversion Loan

On March 20, the Commonwealth Treasurer, Sir Arthur Fadden, announced a Loan of £77,000,000, opening on March 24 and closing not later than April 17.

The Loan was partly for the conversion of £47,000,000 2% securities maturing on April 15, 1953, and the balance is to be used for public works and services of the Commonwealth and States.

Subscribers were given the option of two interest rates—
(a) 4½% maturing on December 15, 1962 (9 year term) issued at par.
(b) 3% maturing on December 15, 1955 (3 year term) issued at £99/10/.

Taxation and other conditions were the same as for the Sixteenth Security Loan in November last.

Company Reports

AMPOL PETROLEUM LTD.—Proposes to issue to selected service station operators in N.S.W., Vic., S.A. and Q'ld. 200,000 ordinary 5/- shares at par, and a further 622,400 shares for acquisition of a chain of service stations in Melbourne and suburbs.

BRADFORD COTTON MILLS LTD.—Allotted 116,500 ordinary £1 shares to Burlington Mills Corporation, New York, for acquisition of that Corporation's holding in Burlington Mills (Australia) Ltd.

COLLIER MOAT LTD.—20,000 shares fully paid, issued for purchase of goodwill of Bright's Transport Pty. Ltd.

ENSIGN DRY CLEANERS LTD.—Registered office transferred to 24 Leinster Grove, Northcote.

KORNBLUMS FURNISHINGS LTD.—Estimated profit for year to 27/1/53 £19,767, subject to audit.

MOULDED PRODUCTS (A/SIA) LTD.—Consolidated profit for year ended 31/12/52, £206,749, subject to audit, after £53,746 depreciation, but prior to tax £87,204.

ROSELLA PRESERVING AND MANUFACTURING CO. LTD.—Net profit £152,234 after taxation and depreciation.

Company Half-yearly Reports

ACORN GOWNS LTD.—31/12/52: Trading results very satisfactory and net profit compared favourably with the corresponding period last year. Orders on hand ensure production at full capacity until July.

A. J. VEALL ELECTRICS LTD.—31/12/52: Turnover and profits were less than for the corresponding period of the previous year. The company has been appointed sole wholesale distributors for Victoria for Westinghouse Electric household appliances and large volume turnover is expected as a result.

ANSETT TRANSPORT INDUSTRIES LTD.—31/12/52: Results show a substantial improvement over the corresponding period of the previous year, and company has operated profitably.

APAC INDUSTRIES LTD.—31/12/52: Sales declined compared with those for the previous six months and an increase in demand is expected due to reduction of stocks held by distributors.

AUSTRALASIAN PAPER & PULP CO. LTD.—31/12/52: The operating company Australian Paper Manufactures had a difficult period because of reduced sales. Following economies and improved efficiency the company made a profit for the half year and sales have improved since October. No interim dividend paid on ordinary shares in A.P.P. Co.

AUSTRALIAN KNITTING MILLS LTD.—31/1/53: In the first five months, trading conditions were very difficult but in the last two months demand increased and in most departments full production is assured for the next few months.

BALLAARAT GAS CO.—31/1/53: Gas sales were 6.4% greater in volume than in the previous corresponding half year. Sales of appliances and residuals satisfactory.

BRAMAC LTD.—31/2/53: Trading was difficult due to buyer resistance and necessity to readjust stock values and prices. Orders on hand for the coming season are sufficient to maintain factories at full capacity.

BRENTON INVESTMENTS (AUST.) LTD.—31/12/52: Revenue was lower than for the previous comparable period.

BRITISH STANDARD MACHINERY CO. LTD.—31/12/52: Severe reductions in public works and general credit restrictions have considerably reduced demand; despite this, the company made a profit over the six months but no interim ordinary dividend declared.

BROOKS ROBINSON LTD.—31/12/52: Merchandising departments experienced reduced sales but this was offset by increased business in manufacturing and building sections, and total sales were well maintained with satisfactory profits.

BROWN & DUREAU LTD.—31/12/52: Due to unfavourable trading conditions and import restrictions, sales considerably lower than for the corresponding period last year and a trading loss sustained. Stocks reduced, and liquid position improved.

BRUCE PIE INDUSTRIES LTD.—31/12/52: Turnover substantially less than for the corresponding period last year. Since December, trading conditions have improved and the mill is again operating at full pressure.

BRYSON INDUSTRIES LTD.—31/12/52: Although vehicle sales were substantially reduced by import restrictions, net profit was satisfactory. Prospects depend upon further easisng of import restrictions.

CLARK MATTING & RUBBER LTD.—31/12/52: The company operated on a profitable basis and a dividend will be considered after the end of the financial year.

COLLIE (AUST.) LTD.—31/12/52: Sales and profits less than the same period last year.

COLONIAL GAS ASSOCIATION LTD.—31/12/52: Gas sales increased by 5% and other operations satisfactory.

COURTAULDS (AUST.) LTD.—31/12/52: Satisfactory progress maintained in construction of factory at Tomago and in installation of machinery and equipment. Small scale pro-

COMPANY HALF-YEARLY REPORTS (Contd.)—

duction of rayon tyre fabric from imported yarn curtailed as result of reduced demand.

CYCLONE CO. OF AUST. LTD.—31/12/52: Sales maintained and profit satisfactory. Demand continuing and supplies of raw material now assured. New Moorabbin factory almost completed and wire cloth division transferred from Abbotsford.

DANKS HOLDINGS LTD.—31/12/52: Turnover decreased in comparison with previous corresponding period.

DUCON CONDENSERS LTD.—31/12/52: Turnover declined but results satisfactory and trading improving.

E. A. MACHIN & CO. LTD.—31/12/52: Sales and profits satisfactory although less than previous year's record.

EAST AFRICAN COFFEE PLANTATIONS LTD.—31/12/52: Picking of 1952-53 coffee crop completed. Expected weight 250 tons (372 last year). Prices higher and satisfactory profit expected.

EDMENTS HOLDINGS LTD.—31/12/52: Sales slightly less than last year, expenses also less and net profit approximately the same.

ELASTIC WEBBING INDUSTRIES LTD.—31/12/52: Sales considerably lower than for the previous corresponding period and profit ratio declined. Poyment of ordinary dividend deferred until end of year.

FETTER MILLS LTD.—31/12/52: Profit considerably higher than for corresponding period of last year and outlook favourable.

FRANCIS LONGMORE & CO. LTD.—31/12/52: Sales maintained but conditions in the industry are unsettled.

FREIGHTERS LTD.—31/12/52: Trading results satisfactory. Many orders in hand for general engineering work and bulk handling equipment and anticipated that the balance of the financial year will show satisfactory trading.

GERRARD CO. OF AUSTRALASIA LTD.—31/12/52: Profits not as great as in the corresponding period last year and turnover of main products lower.

HAWKES BROS. LTD.—31/12/52: Sales maintained at last year's level and increases in overheads controlled; decline in building activities felt but revival anticipated.

H. B. SELBY (AUST.) LTD.—31/12/52: Sales decreased slightly but satisfactory.

H. ROWE & CO. LTD.—31/12/52: Turnover reduced but profit satisfactory and prospects improving. New branch opened in Smith Street, Fitzroy.

HUMES LTD.—31/12/52: Sales improved, orders in hand satisfactory and substantial increase in trading profits for year expected.

INTERNATIONAL PRODUCTS LTD.—31/12/52: Trading results maintained at level of half year to June, 1952, and profit satisfactory.

JOE WHITE MALTINGS LTD.—31/12/52: Trading results satisfactory and production maintained at profitable level.

JOHN TODD LTD.—31/12/52: Stocks and bank overdraft materially reduced and recent improvement in trading expected to be maintained. No interim dividend paid.

KENNARD BROS. LTD.—31/12/52: Despite difficult trading conditions, profit satisfactory.

LANES MOTORS (HOLDINGS) LTD.—31/12/52: Turnover and earnings substantially lower due to unavailability of vehicles; demand remains high.

LIFE SAVERS (A'ASIA) LTD.—31/1/53: Sales and profits well maintained. All shares in Chasers (Distributors) Pty. Ltd. have been acquired for the issue of 3,250 new preference shares, ranking from December 1, 1952.

LINCOLN MILLS (AUST.) LTD.—31/12/52: Output and sales during the first quarter very low, but demand improved rapidly and output and turnover now on satisfactory basis.

MATTHEWS THOMPSON & CO. LTD.—31/12/52: Sales improved but net earnings affected by rising costs and lower gross margins. Results satisfactory.

M. B. JOHN LTD.—31/12/52: Sales exceeded those for the same period last year and profits maintained at satisfactory level.

McILWRAITH McEACHARN LTD.—31/12/52: Results satisfactory.

MECHANICAL HANDLING LTD.—Results satisfactory but no interim dividend paid on ordinary shares in order to conserve funds for development.

MYER EMPORIUM LTD.—31/1/53: Trading satisfactory with higher net profit than in the corresponding period last year, due principally to reduction in operating expenses. Sales maintained satisfactorily and a reasonable year's results seems probable.

NETTL PAPER CONVERTORS LTD.—31/12/52: Turnover considerably lower than for the previous six months and profit reduced correspondingly. No interim dividend paid due to need of funds for capital expenditure.

NOSKE INDUSTRIES LTD.—31/12/52: Sales and profits showed some reduction as compared with corresponding period last year, but satisfactory.

O. J. NILSEN (AUST.) LTD.—31/12/52: Sales and profits less than same period previous year, but satisfactory.

O. T. LEMPRIERE & CO. LTD.—31/12/52: Trading results satisfactory and turnover has increased since December.

OVERSEAS CORPORATION (AUST.) LTD.—31/12/52: Trading results disclosed a reduced profit and liquidity improved. No interim ordinary dividend paid.

PATERSONS (AUST.) LTD.—31/12/52: Sales increased steadily and satisfactory year expected.

P. C. GROSSER & CO. LTD.—31/12/52: Results satisfactory despite some reduction in turnover; prospects encouraging.

PONSFORD, NEWMAN & BENSON LTD.—31/12/52: Trading results satisfactory and profits exceeding 1951/52 levels. Following import restrictions, various lines being manufactured in Australia.

RALPH SYMONDS LTD.—28/2/53 (8 months): Turnover in excess of amount for corresponding period last year and orders in hand satisfactory.

R. E. CUNNINGHAM INVESTMENTS LTD.—31/12/52: Trading conditions steady; stocks considerably reduced, but sufficient; satisfactory profit for year anticipated.

REGENT MOTORS HOLDINGS LTD.—31/12/52: Turnover and profit reduced.

R. H. LAWRENSON HOLDINGS LTD.—31/12/52: Turnover increased slightly over same period last year but higher costs reduced profits. No interim dividend paid, but business improving.

ROBERT REID & CO. LTD.—19/1/53: Since July stocks reduced by £1,339,407 and overdraft by £1,568,797; because of further depreciation of stocks, no interim dividend paid.

ROCLA PIPES LTD.—31/12/52: Production well maintained and profits satisfactory.

RONALDSON BROS. & TIPPET LTD.—Trading conditions difficult but turnover maintained and profits satisfactory.

ROTHFIELD & CO. LTD.—31/12/52: Sales satisfactory although slightly less than for record corresponding period last year.

R. V. B. ENGINEERING PRODUCTS LTD.—31/12/52: Sales slightly lower but profits maintained satisfactorily through increased production, efficiency and factory re-organisation.

SMITH BROS. (TIMBER MERCHANTS) LTD.—31/12/52: Turnover and profits less than for corresponding 1951 period.

SOFTWOOD HOLDINGS LTD.—Logging, milling and selling operations were satisfactory.

SPEEDO KNITTING MILLS HOLDINGS LTD.—31/12/52: Sales well maintained and profits satisfactory.

TECNICO LTD.—31/12/52: Parent company incurred substantial loss which was partly offset by profits of subsidiaries. On present indications it seems unlikely that a dividend will be paid on ordinary shares during calendar year 1953.

THE GAS SUPPLY CO. LTD.—31/12/52: Gas sales increased by 3½% in volume and sales of appliances maintained. Coal supplies have improved and stability of prices appears to have been reached.

THOMAS OWEN & CO. (AUST.) LTD.—31/12/52: Production of vegetable parchment on one paper machine continuing and installation of two further machines proceeding.

TIMBER HOLDINGS LTD.—31/12/52: Turnover and profit satisfactory despite difficult trading conditions. The company has acquired W. Day & Sons Pty. Ltd., Saw-Millers of Griffith (N.SW..) for £5,500 cash and 30,000 5/ shares.

TIMBER HOLDINGS (TAS.) LTD.—31/12/52: Production and sales satisfactory and profit maintained.

TIP TOP PAINTS (AUST.) LTD.—31/12/52: Following drop in building activity, sales and profit fell, and no interim distribution made. Conditions improved early in 1953, and all factories now working to capacity.

TOMLINSON STEEL LTD.—31/12/52: Output maintained and profits comparable with corresponding period last year, with works employed to fullest capacity. Contracts obtained for Kwinana Oil Refinery.

TOM PIPER LTD.—31/12/52: Results satisfactory having regard to the conditions prevailing in the industry.

TROJAN LTD.—31/12/52: Owing to difficult trading conditions, no interim dividend paid.

TURNER MANUFACTURING CO. LTD.—31/12/52: Profit earned, but in order to conserve liquid resources, no interim dividend paid. New selling organisation has achieved satisfactory sales.

UNITED PROVISIONS LTD.—31/12/52: Trading results satisfactory, but interim dividend will not be paid in future.

WESTEELS INDUSTRIES LTD.—31/12/52: Sales approximately equal to corresponding period last year and profits well maintained.

WILCOLATOR (AUST.) LTD.—31/12/52: Sales for first four months lower but improved in November-December. No interim dividend paid.

WILES MANUFACTURING CO. LTD.—31/12/52: Sales slightly greater than for corresponding period 1951 and profits satisfactory.

WILLIS & SONS LTD.—31/12/52: Volume of business lower but trading results satisfactory.

WINTERBOTTOM MOTOR CO. LTD.—31/12/52: Business satisfactory but turnover limited by import restrictions.

WOODMASON'S ICE LTD.—31/12/52: Profits maintained and comparable with results for last year.

WOOLCORD FABRICS LTD.—31/12/52: Trading unprofitable but demand increasing and additional staff engaged. Payment of interim preference dividend deferred.

YARRA FALLS LTD.—31/12/52: After several months of most difficult trading conditions, demand increased towards end of 1952 and conditions for the current six months are favourable.

A TIMELY BOOK

ERIC ROBERTS JEFFERY, 422 Little Collins Street, Melbourne;
W. J. ROBERTS & SON, 422 Little Collins Street, Melbourne,
Members of The Stock Exchange of Melbourne (by whom the whole of the issue has been taken firm).

OBJECTS OF THE ISSUE.

The Company is to acquire the whole of the issued Ordinary Share Capital of Daniel Harvey Limited. Consideration for the acquisition is the issue to the Ordinary Shareholders of Daniel Harvey Limited of 60,015 fully paid shares of £1 each (details relating to this acquisition being contained later in this Prospectus under the heading "Additional Statutory Information"). The funds to be raised by this issue will be utilised to enable Daniel Harvey Limited, the operating Company, to erect and equip a modern foundry, purchase and instal additional machinery, complete a nucleus factory and provide additional capital for the expansion of its business.

REPORT OF MR. DANIEL HARVEY, MANAGING DIRECTOR OF DANIEL HARVEY LIMITED.

The following report by the Managing Director, dated February 13, was published in the prospectus:

The principal manufactures of Daniel Harvey Limited at present are a wide variety of cultivators (disc and tyne), ploughs (mouldboard and disc), harrows, scarifiers, transplanters, dehydrators (fruit), potato sorters. fruit graders (spring bin and rotary bin), citrus processing (wet and dry) plants, and packing house sorting, polishing and grading equipment, specialised dehydrators (fruit, dessicated cocoanut and tropical products), pear sorters and graders, stubble mulchers, rabbit warren rippers and a variety of tool bar equipment for various requirements.

Wartime activities coupled with the research involved and the extra plant obtained has given to the Company a much wider range of production than ever before.

Due to the expansion and development of its activities the Company has secured a factory site of approximately 6¼ acres at Whitehorse Road, Nunawading.

A nucleus factory measuring 200 ft. by 160 ft. has been erected on this site and is now in operation. It is the intention to extend the nucleus factory eventually to an area measuring 200 ft. by 400 ft.

Plans have been prepared for the erection and installation of a fully mechanised foundry which will substantially improve the Company's supply of castings and in time will greatly increase our output. Other manufacturing machinery, including a new 75 ton press about to be delivered, will help considerably to cut costs and augment production.

In due course the Directors intend to centralise all manufacturing at the Nunawading Factory by transferring the activities at present conducted at Box Hill.

In May, 1950, the Company raised £16,650 of Preference Capital which has been utilised in the expansion programme.

The low profit for the year 1948 shown in the Investigating Accountant's Report is explained by the fact that under Price Control Regulations then in force no price increases were permitted in the Company's products despite wage increases and reduced working hours, which had a maximum effect in the years 1947 and 1948.

Since 1948 profits have risen substantially, reaching a record of £34,762 for the year ending June 30, 1952, following the figure of £33,716 for the previous year.

Sales for the half-year ended December 31, 1952, continued to be satisfactory and exceeded those for the corresponding period of the previous year.

Buyers in New Zealand, South Africa, India and the Islands North of Australia are seeking our products, and it is hoped to establish these Overseas Markets in addition to meeting the extensive local demand.

I regard the Company's future prospects with every confidence. The introduction of new capital will enable the Company to modernise and improve its tooling methods and arrange mass-production of equipment, closely associated with Australian agricultural practices, for which there is an immediate demand.

Assuming normal conditions, the Directors consider that the Company should experience no difficulty in paying a minimum dividend of 8%, after allowing for Reserves and Taxation.

REPORT OF INVESTIGATING ACCOUNTANTS.

You have requested us to prepare the requisite certificate for inclusion in the prospectus of the Public Issue, and in accordance with your instructions we have investigated the audited accounts of the Operating Company, Daniel Harvey Limited, for the five financial years ended June 30, 1952. This is the latest date to which audited accounts have been prepared.

ROFIT RESULTS.

The adjusted consolidated net profits of the Operating Com-ny and the proposed New Company for the five financial years ded June 30, 1952, are set out hereunder.

In compiling this table we have made such adjustments to the clared profits, as, in our opinion, are appropriate, but no allow-nce has been made for any additional profit which may be earned the Company Group through the introduction of the proposed w capital, except by way of saving of interest on bank overdraft.

Income Taxation has been deducted from the adjusted con-lidated net profits, at the rates now applicable to Public Com-nies.

	For the years ended June 30, 1948	1949	1950	1951	1952
djusted Consolidated An-nual Net Profits, after adjustment for Income Taxation at the rates now applicable to Public Companies of 7/- and 9/- in the £1, available for Ordinary Dividends and Reserves	£986	£5,422	£15,570	£30,053	£30,413
lance available for Or-linary Dividends and Reserves expressed as a Percentage of an Ordin-ry Paid-up Capital of £150,000	0.66%	3.68%	10.38%	20.04%	20.28%
lance available for Or-linary Dividends and Reserves expressed as a ercentage of the Actual ssued Ordinary Capital t the end of each inancial Year— (£20,005)	4.93%	27.11%	77.85%	150.26%	
(£60,015)					50.08%

VIDENDS.

The rates of dividend declared by Daniel Harvey Limited, in pect of each of the three financial years ended June 30, 1952, the respective classes of issued capitals at the dates of declara-n, are stated as follows:—

	For the years ended June 30, 1950	1951	1952
Preference Capital— ubject to income tax in shareholders' hands	5%	5%	5%
linary Capital— ot subject to income tax in shareholders' hands	Nil	Nil	£2 per share

VIDEND DECLARED SUBSEQUENT TO JUNE 30, 1952:

The following dividend, payable to Ordinary Shareholders, has en declared prior to the acquisition of the Ordinary Issued Capi-of Daniel Harvey Limited by Daniel Harvey Holdings Limited:

Not subject to Income Tax in Shareholders' Hands—
On a paid-up ordinary capital of £60,015 .. .. .. £4,801

NANCIAL POSITION:

A summary of the Consolidated Statement of Liabilities and ets of the New Company, Daniel Harvey Holdings Limited, and wholly controlled subsidiary company is set out hereunder.

BANKER FOR THE ISSUE:

THE NATIONAL BANK OF AUSTRALASIA LTD.

Stockholders of M. B. John Limited registered on 9th April, have a general right of application for and allotment of 000 of this issue, the right to be exercised by 22nd April, 1953.

The underwriters, J. B. Were & Son, have taken firm for allot- to their nominees £50,000 of the Unsecured Registered Notes is issue.

The remaining £100,000 of Unsecured Notes of this issue is ed for public subscription.

OBJECTS OF THE ISSUE.

The capital to be raised by this issue of Unsecured Registered s carrying options over ordinary shares, is required by M. B. Limited, manufacturers of all types of valves, cocks and fit- in bronze, iron, and steel for use with steam, water, oil, ical, air and gas services, to complete the new works now established on a 30-acre site in North Ballarat.

The most important section of the new factory has already built, and will be occupied shortly, but work is still proceed- on a new foundry, a pattern shop, and a building to provide ities for the staff.

Last year the Company made an issue of ordinary shares, and directors consider that it would be undesirable to make a er issue of ordinary shares at this time. The capital needed mplete the new works is therefore being raised by an issue nsecured Registered Notes having a currency of five years, ct to the right of holders to exchange one-half of the face of the Notes held for ordinary shares at par at the end of years. The Company will therefore have the use of loan al for the payment of interest at the rate of 6 per cent. per m for four to five years, in which period the new works at Ballarat will be completely equipped and in full production. Company will have no liability for payment of dividends on iew capital until after 1st May, 1957, when one-half of the nt now being raised may be converted to ordinary shares. lat time the benefits to be derived from the new factory may pected to be reflected in larger profits.

The capital now being raised is required to repay part of the overdraft and to complete the works on the new site by ng a foundry, a pattern shop, and a building to provide ameni- for employees.

DESCRIPTION OF NOTES AND OPTIONS.

Applicants for this issue of Unsecured Registered Notes carry- ptions over ordinary shares to whom allotments are made will ve from the Company two certificates:—

A certificate for Unsecured Registered Notes carrying interest at 6 per cent. per annum, and maturing 1st May, 1958, and

An Option Certificate giving the holder the right to take up on 1st May, 1957, one 10/- ordinary share in M. B. John Limited at par (10/-), for every £1 of Notes allotted.

nvestors to whom allotments are made will be able to deal their holdings as follows:—

1. They may retain both the Unsecured Registered Notes and the corresponding Option Certificates for four years—until 1st May, 1957—and then they may:—
   (a) Elect to surrender Unsecured Registered Notes to the extent of one-half of their holding, which will represent the value of the ordinary shares over which options are held. The Option Certificates would also be surrendered to the Company with a claim for the allotment of 10/- ordinary shares at par (10/-). The remaining Unsecured Registered Notes which would not be required to support the exercise of options over ordinary shares would be retained by the holder until maturity on 1st May, 1958, or
   (b) Elect to surrender the Option Certificate to the Company with payment of 10/- per share in cash for the number of 10/- ordinary shares covered by the Option Certificate and then continue to hold the Unsecured Registered Notes until maturity on 1st May, 1958, or
   (c) Elect to exercise the Option in respect of the whole or part of the shares to which he is entitled.
2. They may sell on the market all or part of their option to take up 10/- ordinary shares at par (10/-) per share, retaining the investment in the Unsecured Registered Notes.
3. They may sell on the market all or part of their holding of Unsecured Registered Notes, retaining the option to subscribe in cash on 1st May, 1957, for the number of 10/- ordinary shares covered by the option certificate held. The options may be exercised by payment for shares partly in cash and partly by surrender of Unsecured Registered Notes.
4. They may sell on the market separately their holding of Unsecured Registered Notes and of Option Certificates.

ASSETS BACKING AND INTEREST COVER.

The Unsecured Registered Notes of this issue have a defined currency but otherwise they do not differ from the other unsecured liabilities of the Company. The backing for the capital invested in the notes is found in the tangible assets of the Company and the security may be expressed in the relationship of total liabilities to total assets.

The report of Messrs. Flack and Flack shows tangible assets of £797,228 at 30th June, 1952. To this may be added £104,364 of capital subsequently raised and invested in additional assets and also the net proceeds of the issue of notes (after deducting estimated expenses of the issue) £241,400, making a total of £1,142,992. Liabilities, including the issue of notes, amount to £628,874. On this basis, each £100 of liabilities was covered by £181/15/- of assets.

The annual interest payment on the issue of £250,000 of 6 per cent. unsecured registered notes is £15,000. This is a charge against the earnings of the Company before taxation is provided. Messrs. Flack and Flack have shown in their report the profits available to meet the interest on the notes. The profit in 1952 was £114,120 or 7.6 times the annual interest charge.

STATUTORY INFORMATION.

Copies of the full prospectus and forms of application may be obtained from members of The Stock Exchange of Melbourne. Applications for the Notes of this issue must be made on the forms of application accompanying the prospectus.

The minimum amount which in the opinion of the Directors must be raised by this issue of Unsecured Registered Notes is £250,000, which sum is needed to provide the sums required to be provided in respect of each of the following matters:—

(i)	No part of the purchase price of any real property purchased or to be purchased by the Company is to be defrayed in whole or in part out of the proceeds of this issue, but the amount to be expended out of such proceeds on completion of buildings and installation of plant and machinery is	£241,400
(ii)	There are no preliminary expenses, but expenses of this issue (including underwriting commission and brokerage amounting to £6,250 payable to the Underwriters in consideration of their agreeing to subscribe for or procuring or agreeing to procure subscriptions for the Unsecured Registered Notes of this issue) are estimated to amount to	£8,600
(iii)	Repayment of any moneys borrowed by the Company in respect of any of the foregoing matters but pending expenditure of the said sum of £241,400 referred to in sub-paragraph (i) hereof part thereof will from time to time be used in reduction of outstanding Bank overdrafts.	Nil
(iv)	Working Capital (except as provided in sub-paragraph (iii) hereof)	Nil

No amount is to be provided in respect of the matters aforesaid otherwise than out of the proceeds of this issue.

Allied Bruce Small Ltd.

Manufacturers and Retailers of Bicycles, Etc.

Reg. Office: Clarendon St., South Melb. **'Phone:** MX 3266. **Directors:** Bruce Small (Chairman), Frank Small, Hubert Opperman, M.H.R., R. J. Hughes, J. W. Nabbs, G. H. Bullimore, D. A. Mason, J. G. Vaughan. **Auditors:** F. A. and W. A. Coghlan.

Year ended September 30, 1952. Meeting March 19, 1953.

Although gross profit was a record at £629,515, sales volume fell away in the latter part of the year. After payment of preference dividends, available profit was £18,798 (£56,474 last year). In order to avoid liability for undistributed profits tax, the usual dividend of 10% was paid, amounting to £29,875, part of which came from accumulated reserves.

Stocks rose by £210,000, absorbing almost the whole of new capital and premium received during the year (£216,000).

After balance date, trading improved during the Christmas period, which was a record.

The following address by the Chairman, Mr. Bruce Small, was circulated to shareholders with the Annual Accounts:—

The financial year to September 30, 1952, faced the Company and its subsidiaries with some very difficult problems. The considerable increases in stocks brought in their train the problem of liquidity, and this was accompanied by a substantial falling away in sales volume, particularly in the motorcycle group and, to a lesser extent, in bicycles, whilst it was found impossible, in spite of very strenuous efforts to hold operating expenses in line with the falling sales. The result is seen in a decline in net profits (before tax) to £41,793.

Stock values at September 30 in the consolidated accounts are £918,202 compared with £707,626 in the previous year. Total taxes paid during the year amounted to £32,136, and of this £4,281 was paid from current profits whilst £27,855 was drawn from the provision for contingencies including taxes account. All of these assessments were for ordinary company taxes on 1951 profits and include advance payments in each case for the 1952 assessments.

New Capital

During the year, Capital Issues consent was obtained for the issue of 540,000 ordinary shares of 5/- each at a premium of 3/- per share, this yielding £216,000. These shares rank for dividend from July 1, 1952. Currys Limited of England took up 275,600 shares of this issue, and the balance was offered to all existing shareholders and was fully subscribed. The fully paid capital of the Company now stands at £500,000, whilst the share premium re account appears at £96,000.

Following the adoption of certain amendments to the Ar of Association in June, 1952, three additional directors were pointed to the Board.

Dividend

In considering an ordinary dividend the Directors were with a most unusual situation. It had been necessary for subsidiary companies to make certain dividend declarations in fa of the parent company so as to avoid the incidence of Divisi Tax.

The results of the group for 1952 might not have been sidered good enough to justify the usual dividend of 10%, the alternative was to allow the parent company's profits to within the tax net at 10/- in the £ on the undistributed amount the income of the parent company is almost entirely dividends retention allowances apply, and consequently any portion of profits held back to strengthen reserves would have been dep by one half by such Division 7 Assessment.

Under these circumstances, the Directors consider the ap priate thing to do is to give the shareholders the benefit of tribution, and for this purpose a dividend at the rate of 6d. share is recommended on the ordinary shares. Allowing for 540,000 which rank for dividend only from July 1, 1952, £29,8 required, to which should be added £6,000 preference dividends

idy paid, making a total of £35,875. This amount has been pro-ided for in the accounts as presented.

The balance of the consolidated profits, £3,701, has been trans-rred to provision for contingencies including taxation account, hich now stands at £54,304. This, in the opinion of the Directors, ovides adequately for all contingencies.

Trading Conditions

At the commencement of the new financial year sales continued at depressed level, but December trade showed a very marked re-val with a crescendo to the Christmas peak which eclipsed all evious December figures in the Company's history. The record ures have contributed largely to the vast improvement in the mpany's liquid position since the balancing date.

The problem of relating expenses to sales is one to which your rectors are giving very serious attention, and it will readily be understood that the spiral of rising wages and costs in every phase of the Company's operations is one which is exceedingly difficult to control. An economy campaign, however, is the order of the day, and this coupled with general improvement in sales, justifies a note of qualified optimism concerning the current year.

The link-up with the Curry organization of England is already bearing fruit, and plans are being formed for the development of a sales and service organization, designed to give the Company the fullest benefits of the advent of television, whilst a constant exchange of technical and sales data on chain store technique promises results of a gratifying nature.

In compliance with the provisions of the Victorian Companies Act 1938, the Directors state "that in their opinion the results of the year's operations have not been materially affected by any items of an abnormal character" other than those referred to above.

The Australasian Paper & Pulp Co. Ltd.

g. Office: Aikman St., South Melb. 'Phone: MX 4721. Directors: Sir Norman E. Brookes (Chairman), C. S. Booth, H. E. Brookes, R. E. Denison, G. Doherty, E. T. Simpson, J. G. Wilson. Audi-tor: J. H. Fitts (Barraclough, Fitts & Co.)

nd Year ended September 30, 1952. Meeting November 10, 1952.

The operating Company, Australian Paper Manufacturers had another record year and paid a larger dividend to Aus-lasian Paper & Pulp, which owns the whole of the ordinary pital. The holding Company in turn has increased its linary dividend from 7% to 7½%.

*Reserves include premiums on new share issues (1952, 30,793; 1951, £498,689; 1950, £207,968), and £4,732 net profit on idation of subsidiaries during 1951.

A.P.M. accounts for the year ended June 30, 1952, (re-ived in the September 1952 "Record" at page 567) showed ncrease in profit of £393,495 to £1,042,116 on larger capital. dividend paid to the holding company was £769,500.

Paid capital of the holding Company rose by over £6 mil-during the period and share premiums of £1,330,793 were ived.

Because of reduced sales since July, 1952, the Company reviewed its expansion programme and has deferred ain projects. This has led to the standing down of some loyees.

With the object of eliminating A.P.P., plans are being idered to offer A.P.P. stock and shareholders a direct in-st in A.P.M. (Refer Half-Yearly Report in this issue).

Net tangible asset backing (written down book values in nolidated balance-sheet)—£1/4/5 for each £1 pref. and ord. h pref. shares are entitled to 8% cum. preferential dividends, rank equally with ord. after 8% to the latter. Both classes hares rank equally for capital and participation in surplus sts in liquidation.

16th Year ended September 30, 1952. Meeting December 16, 1952.

Sales and other revenue rose by £2 million to just under £10 million. The increase in profits made was due to overseas tanker operations rather than the marketing of petroleum products. Ordinary dividend was lifted from 9½% to 10%, the fifth consecutive annual increase of ½%.

*Credited with £312,224.

†Credited with capital profits £1,300, pre-acquisition dividend from subsidiary £137,500, profit on shares in W.A. Petroleum Ltd. £79,924, and share premiums £215,000.

The company's chartered tankers transport petroleum products to Australia from other parts of the world. Two expiring charters are being replaced, and the company will also operate its own tanker late in 1953.

Marketing now covers all States except Western Australia, and storage capacity is being increasesd to over 21 million gallons.

Oil search activities in Western Australia have been transferred to West Australia Petroleum Pty. Ltd., which is 20% owned by Ampol Exploration Ltd. It is proposed to offer £150,000 in new capital of the latter company to the shareholders of the parent company, Ampol Petroleum Ltd., and a further £150,000 to the public.

In March, 1953, the company announced proposals to issue 622,400 ordinary shares of 5/ each for the acquisition of service stations in Melbourne, and a further 200,000 shares to selected service station operators.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 pref., £5/3/-; 5/- ord., 7/4.

At the Annual Meeting held on December 16, the Chairman, Mr. L. J. Thompson, drew shareholders' attention to the record of progress highlighted in the Annual Accounts. His address reads:

The sales and other revenue for the year reached almost ten million pounds (£9,969,921) and represented an increase of nearly two million pounds.

The net profit, before tax, earned by the Company and its subsidiaries amounted to £615,536 and was an increase over the previous year of £186,397.

After providing for income tax the profit is a record at £304,286 being an increase of £31,222 over the previous year.

These profits (after deducting 6% dividend on preference capital) represent 14½% on ordinary capital including the new issues which were not in full productive use all the year.

On a percentage to ordinary capital basis the comparison of the profits over the last five years is as follows:—

1948—164,444 = 18.1%
1949—181,881 = 16.7%
1950—190,594 = 14.7%
1951—273,064 = 18.3%
1952—304,286 = 14.5%

The decrease between 1951 and 1952 is largely caused by rising costs and lagging price adjustments.

Taxation

Income tax continues to take nearly 50% of our net earnings. Australia is a vast continent and our relatively young industries are paying away in income tax money badly needed for their own development.

The present scale of income tax makes it impossible to plough back into industry sufficient money to keep pace with the development of Australia.

I notice in a report published in the daily press on December that the Commonwealth Economic Conference in London has deci that each sterling country should reshape its internal finan policies to enable people to save more of the money they earn. object in this is to build up the volume of savings so that m people will be able to invest in developmental loans.

This decision apparently has reference to Government Loa but the argument can be applied with greater force to the neces of developing private enterprise, without which there would be profits to tax and no savings to invest in Government Loans.

The Commonwealth Economic Conference has merely half cided something which has been common knowledge to every b ness man in Australia for years.

Our high taxation in Australia is all part of the cost of prod tion and one way of reducing today's high costs is by decrea taxation.

In the effort to save our markets from those countries wh are producing at lower costs, Canberra should realise it has important part to play in the lowering of costs of production.

Price Control

The cost of landing petroleum products has steadily risen the past year in addition to which operational costs have increa steeply due in large measure to the living wage adjustments wh have increased the costs of goods and services generally. Increa granted in response to applications by the industry for increa selling prices to offset these additional costs have been both ina quate and unreasonably delayed with the result that during s periods of the year the industry operated without profit.

The Managing Director's report gives some interesting comp sons of price increases which demonstrate the efficiency of the industry. It points out that while the price of petrol at the p

y moved 18% between 1949 and 1952, i.e. from 3/- gallon to 3/6½, basic wage moved 76%, bread 47%, milk 91%, sugar 100%, butter %, tea 42%, cheese 105%, car insurance 25% and tyres 80%.

Shipping

This department of the Company's activities was again called on to make up the leeway caused by the unwarranted delays of Government in adjusting prices to increased costs.

The Board has taken steps over the past two years to maintain tankerage which has yielded good profits both from carrying Company's supplies and from sub-chartering to other companies. It has invested in the construction of an 18,000 ton tanker a cost of approximately £1,350,000 which will be launched early 1953 and be in commission later in the year. The chartered kers "Stanglen" and "James Stove" have been replaced by short term and one long term charter. While in three to years' times the refineries now being built in Australia will ne on stream and reduce the tanker requirements of the Com-ny, it is expected that the overseas demand for tankers will tinue both for carriage of refined and crude products and that Board will be able to profitably employ these tankers.

Oil Search

The search for oil in Western Australia commenced by your mpany some three years ago has been continued throughout the r by a Company known as West Australian Petroleum Pty. Ltd., which 80% of the shares are owned by California Texas Oil poration and 20% by your Company. This Company (West stralian Petroleum Pty. Ltd.), up to the end of October, 1952, expended £1,400,000 on plant and surveys, etc. and during the ndar year, 1953, the budget provides for the expenditure of 00,000.

In order to meet our Company's share of future expenditure s proposed to register another subsidiary Company called Ampol loration Limited to take over our share interest in West Aus-lian Petroleum Pty. Ltd. and issue 1,200,000 5/- shares for public scription. This new issue will be offered in the first instance shareholders of Ampol Petroleum Limited.

Drilling equipment and machinery for drilling to a depth of 00 feet has been landed at Learmouth in the Exmouth Gulf ion and a party of twenty-two men equipped with rigs and or transport has been conducting an intensive geophysical pro-mme with the object of pin-pointing the first site for drilling.

One Brand Stations

This change in marketing methods adopted by several of the e companies was met by all the Australian companies forming independent group with the object of maintaining as many tiple stations as possible.

At the same time your Board decided, in order to meet the growing demand for the Company's products, to acquire the best land sites available on which to erect modern service stations to be leased on conditions to ensure to the motorist the most up-to-date service.

To this end a top level executive was sent abroad to study the latest designs for service stations and modern ideas for conducting these stations.

One of such modern service stations has been erected at Mosman, Sydney, and it is believed that this will set a new standard throughout Australia in service to the motorist.

Over a period of three to four years this building programme will require considerable finance and your Board is pleased to say that very satisfactory terms have been arranged for a long-term unsecured overseas loan at 1% p.a. interest. Repayments of the loan, which will not commence until 1963, will be divided over thirty annual instalments.

Dividend

Shareholders will be gratified by the Board's decision to recommend an increased rate of dividend, viz. 10%. A review of the dividend rates since 1947 shows a steady progression as follows:

1947	6%
1948	7½%
1949	8%
1950	8½%
1951	9½%
1952	10%

and marks the profitable growth of the Company over this period.

With the expansion of capital in recent years the list of shareholders has grown considerably and now totals 10,460, a great many of whom are users of the Company's products while a substantial number are also proprietors of garages and service stations.

Reserves and Capital

Reference to the consolidated balance sheet shows that the general reserve now totals £1,000,000 while the unappropriated profits carried forward amount to £127,764.

The paid-up capital stands at £2,480,000 and with the reserves and undivided profits makes the shareholders' fund £3,607,764.

Staff

Before concluding this address I would like to pay special tribute to the work of the Managing Director, Mr. W. G. Walkley, and to the Company's staff for their services during the past year. As an indication of this appreciation, which shareholders are asked to support by adopting the Balance Sheet, the Board has appropriated during the year, £36,871, for the Staff Provident Fund, being a contribution at double rates which is in keeping with the Board's policy while profits are being maintained at a high level.

Know the Blessing of
PLENTY

The harvest of a successful crop is one which provides plenty for those who did the planting and the reaping. To successfully harvest your earnings after a life-time of work, get the habit of regular saving.

Save with a plan; putting away as much as possible for the future from your earning days.

Your pass-book should journey once a week to the Bank. Your bank balance should increase by regular deposits — that is the true purpose of saving.

You will never WANT if you SAVE

†In 1952, credited with £110,000 general reserve.

Imported cigarettes are also handled, but these have been reduced following import restrictions; however, improved supplies of leaf from overseas have enabled Australian production to be increased.

The Australian 1952 crop was larger than in 1951, but the quality was affected by drought and insect pests. From early reports the 1953 crop will be smaller. Australian production is still only a small proportion of Australia's total needs.

The "B" ord. shares participate equally with ord. shares for dividend, and in a winding-up participate pro rata with the issued ordinary capital in any assets remaining after repayment of pref. and ord. capital. On this basis, net tangible asset backings for the various classes of shares based on book val in the consolidated balance-sheet are—Pref., £8/2/7; o £1/3/11; "B" ord., 3/11.

"The reduction in the earnings of the subsidiary companies arose from the delay in securing the approval of the Price Control Authorities of the six States," said the Chairman, Mr. D. B. Lewington, in his address to shareholders at the Annual Meeting on February 26. His address reads:

Since our last meeting Mr. R. S. Wadley, having reached retiring age, has resigned from the Board. At the date of his retirement, Mr. Wadley had spent 45 years in the service of your Subsidiary Companies, and for the last 19 years had been a Director of this Company. I am sure all stockholders would wish to join with me in placing on record our deep appreciation of the valuable services rendered by him during that long period.

It is not proposed at present to fill the vacancy on the Board caused by Mr. Wadley's retirement.

Accounts.

As mentioned in the Directors' Report, the Accounts for the past year have been presented in a form which is rather different from that which has been customary in previous years. In making this change, your Directors had as their object the presentation of the Accounts in a manner more in keeping with modern practice and which would afford to stockholders a clearer view of the present position of the Company and its Subsidiaries. As a res however, it has not been possible this year to show the com able figures for the preceding year and brief notes have been cluded in the Accounts to explain the changes in presenta which have taken place.

In connection with these notes it is, I think, important I should point out again that, although certain sums which h been set aside in the past to meet anticipated liabilities are the opinion of your Directors, no longer required for the p poses for which they were originally provided, the funds invo have been used and are still required for use in the running of business and to strengthen other Reserves. Consequently, alteration is more in the nature of a reclassification of Rese rather than a reduction in the anticipated future calls upon resources of the Company.

Finance.

The only other item in the Accounts to which I think I sh refer is the Bank Overdraft, which has shown a steady incr during the past few years to a figure of £4,291,888 at 31st Octo 1952. This sum reflects partly the increased cost of carrying st etc., caused by the world-wide inflation of recent years, and to a substantial extent the additional funds required to finance

eciable increase in the volume of business done by your Subry Companies. This matter is under constant review by your ctors and, when the time is opportune, appropriate steps will aken to place the financing of the Company's permanent capiequirements on a more permanent basis.

Profits.

n reviewing the operations for the year it is, of course, reable that the result was a decrease in the distribution to the rs of Ordinary and "B" Ordinary Stock, despite the maintenof a high degree of efficiency by your Subsidiary Companies an increase in the volume of business done by them, whilst s not possible to add to Reserves to the extent which your tors consider desirable under present conditions.

As was explained to stockholders in a circular during the year, eduction in the earnings of your Subsidiary Companies arose the delay in securing approval of the Price Control Authorifor the necessary price adjustments to cover unavoidable ines in their operating costs. Although the adjustments asked were ultimately approved, the delay arising from the necesof having the application considered by the Price Control orities of the six States adversely affected the earnings of Subsidiary Companies to the extent that not only was it sary to defer the payment of the interim dividend on Ordind "B" Ordinary Stock normally payable at the end of June but the results for the full year permitted of a distribution ing only 8¼% to the holders of those classes of stock. However, during the year, extensive discussions have taken between representatives of the Company and various State Control Authorities. As a result, your Directors feel confithat a very much better understanding of your Company's ems now exists in Price Control circles and, should further tments in selling prices be necessary in the future, the deIn securing approval will be minimised and will not have the is adverse effect upon your Companies that they have had in ast.

Import Restrictions.

uring the greater part of the year under review your Sub-y Companies were affected to some extent by the restrictions iports from overseas imposed by the Commonwealth Governin March, 1952, but I am glad to say that, under the Regula- they are able to secure their reasonable requirements of obacco of non-dollar origin, and their requirements of other ials, such as cigarette paper, cork-tipping, and the like, which sential for the continuance of their operations.

he restrictions have, however, resulted in a substantial de- in the quantities of manufactured cigarettes which, for time past, have been imported from the United Kingdom and countries. Your Directors have never agreed that the imtion of manufactured cigarettes is an acceptable substitute shortage in supplies from the factories of Australian Manu-ers, and have made repeated representations that the reasonneeds of the Australian smoking public should be met by the vion of the necesary raw materials to enable Australian Manu-ers to produce the requirements of the public in the brands consumers undoubtedly prefer.

o far as these importations of cigarettes in such large quan- are concerned, your Directors have never considered them ier than temporary expedients to alleviate an overall shortntil such time as other restrictions are relaxed to an extent would enable Australian Manufacturers to meet the de-Consequently, your Directors would not be concerned at fect of these restrictions, provided that the necessary addi- quantities of raw materials are made available to local facturers and the importation of cigarettes is permitted to tent necessary to meet the real demand for them.

Tobacco Leaf Supplies.

this connection, I am glad to say that the Commonwealth ment found it possible to approve of a small but welcome se in the funds made available to your Subsidiary Companies e purchase of leaf tobacco from the United States of America last year's crop. As a result of this and improvements in ties of leaf available from Australian production and from sources, your Subsidiary Companies were able to make a while increase in their production late in the year under and, although this improvement came too late to have a al effect upon the year's earnings, it will, of course, be of in the future. As a matter of interest, stockholders will be o know that, since the close of the year under review, a material increase in production has been achieved and irectors have grounds for feeling confident that still further ses can be attained in the not-too-distant future.

is unfortunate that, once again, the prices which had to be st year in order to secure your Companies' requirements of obacco from the United States of America were very high, is impossible to forecast if or when some relief in this on can be expected.

uring the year under review two of the senior officers of Companies visited the United States of America for the pur- advising your Companies' buying agents in their market ons and ensuring that the limited dollar funds available pent to the best advantage.

ith regard to leaf tobacco from non-dollar sources, I am to say that your Subsidiary Companies were able to secure easonable requirements from last year's crops, despite the hat, owing to seasonal conditions, production in Southern sia was rather less than originally estimated. Prices were igh and the use of leaf tobacco from this source is no the attractive proposition, from a cost point of view, that been in past years. Early reports of this current crop indicate that your Companies should be able to secure again this year at least the same quantity as was obtained last year.

Now, turning to Australian-grown tobacco leaf, the 1952 crop production showed a substantial increase over the 1951 crop, though quality was affected by drought conditions and damage caused by insect pests in the major producing State of Queensland.

Stockholders will recall that, at our last meeting, I expressed the concern of your Directors that certain types of tobacco leaf, which normally would not be offered for sale, had found buyers at auction sales at prices which it was feared would not encourage the production of quality tobacco leaf. Your Directors felt, in voicing this concern, that the position in the long run would not be to the best interests of manufacturers, growers or consumers, and the present difficulty which is being experienced by growers in Queensland in disposing of all of their 1952 crop is, in the main, the direct result of their continuing to offer some leaf of a quality which is not acceptable to consumers.

From early reports, the 1953 production will not reach that of the past year, and in some growing areas the dry season and lack of adequate water conservation have seriously affected the yield per acre. Though the total production is still only a small proportion of Australia's total needs, there are heartening signs of a worth-while and permanent expansion being achieved, which will be hastened when increased irrigation facilities are available and a greater measure of control over the most destructive pests and diseases, which attack the tobacco plant, is attained.

Your Subsidiary Companies have maintained their advisory service to growers, and this policy, which is, I think, appreciated, must contribute to the improvement and expansion of the growing industry in Australia.

Conclusion.

During the year under review conditions which faced industry in general were rather uncertain. In the early part of the year the sudden impact of the import restrictions, to which I have already referred, caused a great deal of confusion, whilst buyer resistance in many directions, due to uncertainty, credit restrictions and high prices, made its impact felt in most industries. On the other hand, the period was relatively free of interruption from industrial disturbances, and power restrictions were not as severe in their incidence. Toward the latter end of the year a substantial measure of recovery took place and trading conditions returned more to normal.

Undoubtedly, conditions early in the year had the effect of reducing for the time being the overall demand for cigarettes and tobacco but, as your Subsidiary Companies are not yet meeting the full demand, this did not in any way affect the sale of their products but resulted rather in a slight reduction in the gap between supply and the demand for the brands manufactured by them.

Now, with regard to the future, I think it is proper that I should be rather restrained in attempting to forecast just how your Companies will fare. Recent indications would appear to show that the policies of the Federal Government are having an appreciable effect in slowing down the inflationary spiral, and it is to be hoped that, in the near future, it will be halted and reversed. As I have mentioned earlier, a substantial unfilled demand still exists for the brands manufactured by your Subsidiary Companies which, from all aspects other than raw materials, they will be well equipped to meet. Your Directors feel, however, that the position in regard to these raw materials has improved to an extent which should enable production to be still further expanded in the near future, whilst the establishment in the minds of the Price Control Authorities of a better understanding of the Company and its problems justifies a belief that your Companies can expect to benefit from their expanding operations.

There may be, of course, many unforeseeable circumstances which could upset all expectations, and there are still many difficult problems to be overcome. Nevertheless, your Directors consider that they are justified in a feeling of what I might term cautious optimism.

I would like to close, Ladies and Gentlemen, by once again expressing my thanks and appreciation for the work and loyalty during the year of all of the employees of your Companies, without whose co-operation and team-work success would not be possible.

"The cement works at Geelong have now passed into a period of heavier production, and we hope to turn out 275,000 tons per annum, increasing in the near future to 300,000 tons per annum. This is a 40% increase in manufacture and should go a long way to meeting the deficiency in Victoria," said the Chairman, Mr. W. B. McCann, at the Annual Meeting held on February 26. His address reads:—

It will be observed that we have taken up a further 100,000 fully paid £1 shares in Australian Portland Cement Pty. Ltd., thus bringing our holding in that Company to 1,250,000 fully paid shares of £1 each. Kandos Cement Co. Ltd. hold a similar number of shares in Australian Portland Cement Pty. Ltd. Thus the paid-up capital of the Proprietary Company is 2,500,000 shares of £1 each, and it, of course, owns and operates the two cement works at Geelong and Kandos. Your Company financially is therefore an investment concern primarily, but it has a management function for the Proprietary Company in that it is the Managing Agent for Victoria, and similarly Kandos Cement Co. Ltd. is the Managing Agent in New South Wales.

Australian Portland Cement Pty. Ltd. and its two equal shareholders are together actively engaged in the manufacture and sale of Portland cement of its several brands. The organisation and inter-dependence of the three concerns is somewhat unique in Company practice, but we now have behind us the experience of 23 years of operation in this manner, and I am glad to say that our activities have been carried on without friction and in an efficient and fully co-operative manner.

Your Directors have continued to declare dividends at the rate of 8 per cent. per annum on the par value of the shares. It is felt, however, that judged by any standard this is a modest return to shareholders, but it must be remembered that cement is sold at a controlled price.

Improved Production

It is most pleasing to be able to report that we have entered a period of much heavier production. The nightmare years through which we have just passed are, we hope, only now a memory, although there are many lessons to be drawn from them. It has been a period of intense anxiety. Controls held us in check at a time when expansion in the national interest was most vital. Our failure to achieve full production was in direct proportion to the failure in coal supplies. During the four years to the early part of 1952, we were deprived, by lack of coal, of the manufacture of nearly 300,000 tons of cement, which would have been made at Geelong Works. If this quantity had been available to the market, there would have been no need for importation from overseas, and a sum of money amounting to perhaps £3,000,000 would have been saved to the people of this State.

Then, too, the types of coal we were forced to use—some of it totally unsuitable—caused serious difficulties in the process of burning cement, and much extra expense was caused. Also at that time our expansion programme was under way, but activities in that sphere were hampered to such an extent that it has taken us three years to accomplish what normally would have been done in less than one year. There are many other difficulties of which I could tell you, one of which was an acute shortage of labour, but I have said sufficient to explain why our increased production has been delayed.

There is no doubt that Australia has passed through an economic crisis, and although the reactions are unpalatable, the present conditions are necessary and in our best interest. We have been going ahead too fast, and a little breathing space will do us all good, provided it does not encourage us to engage again in a wild spree such as we have recently witnessed. The pr atmosphere is more favourable to business.

Australia has made magnificent progress in the relatively years of its existence. It has been built by private enter and I am quite sure private enterprise, if left without unnece restrictions, could continue to do a good job.

I have said that the cement works at Geelong have now p into a period of heavier production, and we hope to be in a tion, unless unforeseen events occur, to continuously turn something of the order of 275,000 tons per annum, increasi the near future to 300,000 tons per annum. This is a 40% crease in manufacture and should go a long way to meetin deficiency in Victoria. It is significant, too, that cement wor other States anticipate the possibility of surplus production, cement should therefore later this year be available from tralian sources if required here.

The works at Geelong are now in first class condition, and Directors are proud to pay a tribute to the technical officers have so ably performed, under the most difficult circumst the task of expansion. We feel that in its size and engine standards the plant is an important national asset and can pare satisfactorily with the better known plants in other pa the world. Together with the works at Kandos, which are maintained in a sound and up-to-date manner, the Propr Company is now producing a quantity approaching half a m tons of cement per annum. It was not so long ago when figure represented the output of all the cement works in Aust To-day it represents about 40% of the total production. It interest that later this year, and so far as can be seen i future, the overall production of cement in Australia will be cient for the total market, and importation of cement wi unnecessary.

Taxation.

While I am speaking, there is one plea I should like to and I am sure I am joining with industry as a whole in v a request to the Federal Government to consider the questi taxation on public companies. The income tax is at preser in the pound on profits, and, in addition to this, shareholder again taxed at high rates on their dividends from the Com It is a staggering amount, and there is little possibility of bu up reserves, which are so necessary to enable an enterpris our own to maintain itself or to expand. In our case, in there are two factories contributing to the joint profit, it that one of the works is employed for the benefit of the Tax Commissioner. I am convinced that the tax is hampering the gress of Australian industry and should be reduced.

Building Trends

It has been my practice in past years to outline the de ment of the building statistics for Greater Melbourne ove period since 1943. The figures are:—

Years ending November 30:—

1943	£1,062,188
1944	1,055,407
1945	3,033,109
1946	10,562,465
1947	13,082,679
1948	19,417,019
1949	23,882,766
1950	32,120,260
1951	39,696,000
1952	31,836,000

and reveal the astonishing increase in the values of building activity. It will be seen that a slight recession took place in 1952, which may indicate that a peak has been reached.

In 1951, 21,582 dwellings were completed in Victoria, and that was then the highest total ever reached in the State. In 1952, the figure was 23,468.

Associates and Staff

I am sorry to report that during the year our old friend, Mr. W. H. Nichterlein, passed away. He was for many years a Director of the Company and helped it greatly in its early years. Then, too, one of our elder shareholders, Mr. P. E. Dehnert, was called away at the age of 90 years on October 19 last. Our sympathy goes out to the families of these late associates.

In conclusion, I would express what I am sure is in your minds, namely, our appreciation of the work of the staff of the Company. Day and night the year round our men are putting forth their best efforts in our service. They are entitled to our thanks, and I give it unreservedly.

"Today all finance companies are finding demands on their funds greater than their resources," stated the Chairman, Mr. J. S. McCallum, at the Annual Meeting on December 17. His address was:—

At our last Annual General Meeting, I recorded a note of warning regarding a possible recession in the motor vehicle industry and it was felt that, owing to the expected limits in hire purchase funds, buyers would not be able to finance their purchases of motor vehicles.

Over the past year, these restrictions have undoubedly found their mark in the motor industry and, whilst finance companies are restrictive in their lending of money, motor houses will find sales difficult. Restrictive lending is not limited only to our company and I am confident in submitting that to-day all finance companies are finding demands on their funds greater than their resources. Each year I have reported to you that the demands on your company's funds far exceed funds available, and this demand still continues.

Although the issue of further capital is restricted under Capital Issues Control, the Central Bank has lifted all restrictions on overdrafts against hire purchase companies, but this does not provide any relief as it appears that banks, like all other financial institutions, are very restricted as to funds for lending purposes. Your Directors, however, have not overlooked the fact that it may be possible to raise funds other than from our bankers. Discounting of short term loans are at last proving attractive to the investing public in this country and it appears that these issues will replace to an extent, in large companies, advances made by trading banks and give the Company the added advantage of having control over the terms of such loans made to the Company.

Accounts

Taxation still continues to become one of the greatest shareholders in any public company and, although we were all hopeful that some relief might have been expected, this great burden still continues and, in our company, takes some £14,550, as against £20,475 paid in dividends to our shareholders.

In settling the accounts of the company, your Directors considered the present economic conditions and also the recession which exists in the country to-day and have made considerable internal reserves before striking the profit of £36,046 for the year's operations.

We feel that every precaution should be taken against a possible further recession, and this action has meant the reduction in your dividend from 10% to 7½% per annum. I am sure you all appreciate the reasons for the action your Directors have taken and I am confident that the company will continue to make good profits.

We continue to satisfy the demands of our dealers but our lending policy is very restrictive.

Our interstate subsidiaries are now completely established and these companies also find that demands far exceed moneys available, which proves that consumer credits play an extremely important part in the present day economic structure of this country.

Future

We look forward with confidence to the future and I hope that, before my next report, I will be able to advise you of the availability of further funds to the company.

Compressed Cork Sheet Co. Ltd.

Reg. Office: 75 Cubitt St., Richmond, E.1. **'Phone:** JB 1149. **Directors:** G. P. Embelton (Chairman), J. A. Kingsmill (Manag. Director), A. S. Chinn, E. L. Chesterfield, S. B. Holder. **Auditors:** Buckley & Hughes.

Year ended September 30, 1952. Meeting December 12, 1952.

Following conversion to a public company in April, 1952, accounts for the year ended September 30, 1952, show a profit lower than the three previous years, due to the recession in trade. Maiden dividend of 7% absorbed most of the profits.

"The cork sheet and cork sheet products which the company manufactures are basic materials. Chiefly they are raw materials for other industries," said Mr. G. P. Embleton, Chairman, at the Annual Meeting on December 12. His address reads:—

This is the first meeting of the Compressed Cork Sheet Co. Ltd. since it was made a public company, and to us who have been associated with the undertaking since its establishment in 1933, conversion to a public company has been a milestone in the company's progress.

Hitherto the company's shares have been held by a small coterie of persons, but we do welcome the interest of new shareholders and believe the confidence which they have shown by the investment of their money will not be misplaced. They can certainly be sure of the Directors' assiduous and enthusiastic endeavour.

Use of Products

The cork sheet and cork sheet products which the company manufactures are basic materials. Chiefly they are raw materials for other industries. They are essentials, and because of that we believe the company will continue to progress. You will find a little of our cork in every motor car engine; you will find it in nearly every screw cap that covers a bottle or a tin. You will find it in transformers of the Electricity Commission and even the Government Note Printer uses it on some of the machines that print the currency. It is used in the manufacture of shoes, and our cork tile floors are to be seen in many important places, throughout the Commonwealth, including the Royal Melbourne Hospital, Yooralla Hospital, N.S.W., and the Pyrmont Power House, N.S.W.

Profits

Already each of you has a copy of the balance sheet and accounts for the year ended September 30 last. Although the profits for the year can be considered satisfactory, they have been adversely affected by a recession in trade since last May. During last year buyers ordered liberally for stock, but this year they have been reducing their stock levels and have ordered as little as possible. Of late weeks, however, there has been a noticeable improvement and we feel confident of the future.

The profits were also adversely affected by the loss of £4,000 through the bankruptcy of a New South Wales company. The company had been favourably reported to us and we were only one of many who lost by them. Their own bankers, who gave them such a good report, were involved to a very much greater extent than ourselves and had no security. That company's affairs are now being examined in Court in Sydney, but we are not hopeful of any monetary gain from the proceedings.

Australian Forest Products Co.

The money which the new shareholders subscribed in May last was invested in the Australian Forests Products Company, which will engage in the production of wood flour of high quality. Its factory will be a really up-to-date plant, we believe the best of its kind in Australia. It has been established in Canberra, and its raw material will be sawdust from the timber mills working the Pinus Radiata forests in the Capital Territory. Other shareholders are Monsanto Chemicals (Aust.) Ltd. and Beetle-Elliott Ltd., who will be important buyers of the wood flour. The establishment of the plant is now well advanced and production is expected to commence in February/March. Mr. Kingsmill, who is our Managing Director, is Chairman of this new company. Other Directors are our Mr. Chinn and one representative each from Monsanto and Beetle-Elliott.

We do not expect to show much profit from this plant in the balance sheet for the year ending September 30, 1953, but in succeeding years we believe it will be a profit-earning unit which will swell this company's prosperity.

Taxation

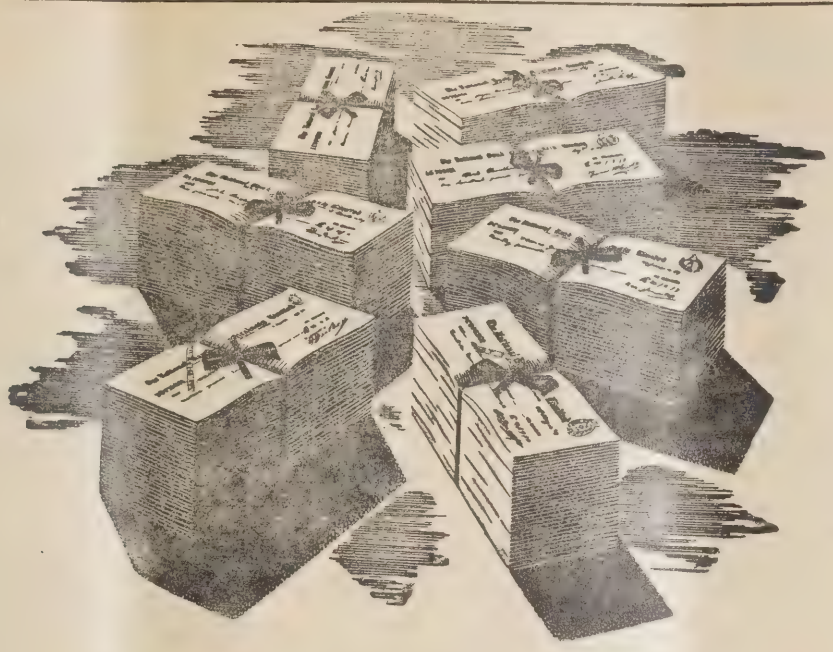
It has become common practice for Chairmen, when addressing shareholders, to make some reference to taxation. We do regret the severity of taxation, but since it is stated by the Government to be essential we cannot usefully quarrel with it. One should bear in mind, too, that the money is put back into circulation and I suppose helps to make the trade on which we live. Nevertheless we believe it a duty to indicate to both the Government and the public the effects on selling prices of Company Tax.

In calculating the selling prices of its products, a company has to budget sufficient profit to pay a dividend to its shareholders. If the dividend sought as a target is, for instance, 7%, the company has to budget for 12¼%, because when you as shareholder get 7%, the Government gets 5¼%.

The company's selling prices must be fixed accordingly, and thus this 9/- in the £ tax is really similar in its operation to a sales tax. If you were to examine the balance sheets and profit and loss accounts of a cross-section of representative companies you would find that the tax equals in its incidence a sales tax of 2½% to 3%. Moreover, the product of one company is so often the raw material of another company that the charge is increased in each case and in the end probably totals the equivalent of a sales tax of 5% to 6%. However, as I have said before, payment of taxation is evidently essential, and we only hope for maintenance of a prosperity that will enable us to continue to pay it.

Directorate

Finally, I would like to mention the appreciation of Mr. Chinn, Mr. Kingsmill and myself, the Directors of the company since its beginning, of our new Directors, Mr. Holder and Mr. Chesterfield, who have joined the Board since conversion to a public company. Their advice has been good and their criticism helpful and we are really glad to have them with us.



Millions of cheques . . .

Each week millions of cheques are used in payment for all kinds of business and personal transactions. This simple method of payment, developed and tested over the years, is the safest and most convenient way to pay debts and to transfer money. A cheque account with the National Bank makes available these outstanding advantages. In addition, the opening of an account with the National Bank gives you the right to participate in all the other modern services offered by the Bank. For further information call upon the Manager of our nearest branch—he will be pleased to meet and help you.

With the exception of small quantities shipped to the mainland, the whole of the output is sold in Tasmania.

Asbestos-cement production was well maintained, but was affected by reduced building activity after balance date. The company has purchased an interest in an Asbestos mine in South Africa. After the close of the year, additional capital of £95,937 was raised to finance increased stocks and provide additional working capital.

Elastic Webbing Industries Limited

Reg. Office: 278 Queen St., Melb. 'Phone: MU 7166. Directors: M. Plotkin, H. Sheezel, P. E. Lipshut, W. N. Rothfield, M. Cohen. Auditors: Rucker, Mackenzie & Gordon.

4th Year ended June 30, 1952. Meeting December 1, 1952.

Sales for the year were a record, but the volume fell off in the latter six months. Group profit was up at £31,539 on larger capital.

The consolidated appropriation account was charged with £5,945 representing a reduction of 1950 profit due to inter-company adjustments. A dividend of 6¼% was paid (8% last year).

†Adjusted for profit £5,945 overstated, and for £66 taxn. underprovided in 1949.

Activities are conducted through two wholly-owned subsidiaries.

Elastic Webbing (Australia) Pty. Ltd.—Factories at Queen Street, Melbourne, and Collingwood supply a large proportion of the elastic requirements of the industries manufacturing corsetry, underwear, clothing, footwear, and surgical appliances. Softgoods wholesalers cover retail distribution throughout Australia. A large proportion of the Australian requirements of rigid webbings for use in motor bodies, slide fasteners and the shoe trade is being supplied.

Plotex Yarns (Australia) Pty. Ltd.—Produce covered rubber thread for elasticised fabrics and garments.

Net tangible asset backing (book values in consolidated balance-sheet)—Pref., £3/0/2; ord., £1/0/9.

"We believe that only by the continuous adoption and development of improved techniques, as we do here, can any industry in Australia expect to compete with imported manufactures," stated the Chairman, Mr. M. Plotkin, in addressing shareholders at the Annual Meeting on December 1. Mr. Plotkin's address reads:

From the announcements already made, you are aware that the consolidated final accounts show a surplus of £31,539 for the year ended June 30, 1952, after providing £22,154 for depreciation and £9,300 for income tax. The accounts show the position after provision has been made for both preference and ordinary dividends.

In October, 1952, Mr. Maurice Cohen, LL.M., was appointed to the Board of this company, as well as to the Boards of the two operating subsidiary companies, and I feel confident that all three companies will benefit from Mr. Cohen's wide legal and commercial knowledge and experience. Also during the year Mr. L. J. Meredith was appointed Secretary to all the companies upon the retirement from that position of Mr. P. E. Lipshut.

Trading Conditions.

The sales of the operating companies have reached new record levels during the year ended 30th June, 1952, However, it was during the first half of the year that the high sales figures were recorded as the second half of the period reflected the general recession in trade so evident in this country. In addition, very large quantities of elastics were imported into Australia during the year under review. These importations aggravated the sales position very considerably and this prompted us to apply to the Minister of Trade and Customs for a Tariff Board hearing to determine what rates of duty should be imposed on elastics in our range of manufacture. Our application was granted and the public hearings in both Sydney and Melbourne have now been completed, but as the usual investigations are yet to be carried out by officers of the Tariff Board, its decision will not be announced for some little time yet. (We believe that only by the continuous adoption and development of improved techniques, as we do here, can any industry in Australia expect to compete with imported manufactures.) Australia's generally very much higher wage rates and working standards impose a greater strain on industry than is imposed in other countries.

Operating Subsidiaries.

Elastic Webbing (Aust.) Pty. Ltd. has continued to be as adaptable as ever in the production of new lines. Of particular interest has been the world-wide fashion demand for wide elastic belts for ladies, and we are catering for this trade. Several completely new articles are planned for production in the near future, and all are allied to our existing range of activities, and as the time for actual production draws closer, so suitable detailed announcements will be made to the trade.

During the last few months, greater attention was paid to the manufacture of rigid webbings for use in motor bodies, slide fasteners and the shoe and slipper trades. Substantial quantities have been produced, and an increased rate of production is planned. These new types of articles illustrate the diversity of the lines made by us, and the adaptability of our production.

In Plotex Yarns (Aust.) Pty. Ltd. the installation of the latest machines has been completed, and the full demands of those Australian industries requiring covered rubber thread as a raw material can now be met. The demand for elasticised fabrics and garments is still growing in Australia and, indeed, throughout the world, and this 5-year-old subsidiary company's contribution to this organisation as a whole is increasingly important.

Building Operations.

The building operations at Victoria Parade, Collingwood, were suspended at the end of December, 1951, except for nominal activity, but I am pleased to say that the early completion of the dyehouse is now planned.

I may say that we take great pride in the production of goods of top quality, and this can be maintained only by having the wholehearted support and co-operation of a skilled staff. This aspect is very evident in this organisation, and I wish to take this opportunity of expressing appreciation to the Directors, to all staff members and employees, for their unstinted support throughout the year.

Creamoata Limited

Reg. Office: Sunshine Rd., West Footscray. **'Phone:** MW 2948. **Directors:** J. W. Beveridge (Chairman and Manag. Director), A. L. C. Flint, P. Hosking, L. G. Lucas, J. Beveridge. **Auditors:** Davey, Balding & Co.

20th Year ended September 30, 1952. Meeting December 16, 1952.

Following a large expansion in recent years, turnover rose by 48%, exceeding £1¼ million. Profit was 50% higher at £46,819.

Dividend was maintained at 8% on extra capital in use. No taxation was payable, owing to special depreciation allowances on new plant.

"Sales are increasing, and this, coupled with efficient operation and management, should ensure the continuing profitability of the company," stated the Chairman, Mr. J. W. Beveridge, in the annual report to shareholders. The report is as follows:

Net profit was £46,819. No provision for taxation is necessary as the Company, having taken advantage of depreciation allowances available on new plant, is not liable for income tax on this year's profit. Dividend as detailed in the Profit and Loss Account absorbs £28,000, and an amount of £18,819 is added to the £13,894 brought forward as at September 30, 1951, making the amount of undivided profits now £32,713. Of this amount the Directors have decided to transfer £7,140 to the General Reserve and an amount of £5,000 to a Staff Retirement and Benefits Fund, leaving £20,573 to be carried forward.

State of the Company's Affairs.

The general reserve at September 30, 1951, stood at £27,860, t which has been added £7,140 from profits, making the reserv £35,000.

Shareholders' funds thus comprise:

Share capital	£350,000
Reserve	35,000
Undivided profits	20,573
Total	£405,573

Clonmore Investments (Aust.) Ltd.

Reg. Office: 375 Collins St., Melb. **'Phone:** MU 5392. **Directors:** S. Ricketson (Chairman), G. G. Jobbins, Col. Allan Spowers, D.S.O., M.C., Col. F. H. Wright, O.B.E., V.D. **Auditors:** Flack & Flack.

Year ended October 31, 1952. Meeting December 18, 1952.

Profit of £5,764 was lower than last year's annual rate of £6,720. Dividend of 4% was maintained.

Formed in 1950, the Company is the seventh of the Capel Court group of investment Companies.

At balance date, the Company's investment portfolio consisted of 150 investments, all in Australian companies, of which 95% was invested in ordinary shares and the balance in preference shares.

Market value of the portfolio was £31,557 less than book value, reducing asset backing of the 5/- shares to 3/7.

Company Finances.

An issue of 200,000 shares of 5/- each was offered to shareholders by letter dated August 1, 1952, on the basis of one share for every seven shares held. This issue was undersubscribed as at 30/9/1952, and the Directors consider that prevailing financial conditions were largely responsible. As set out in the letter to shareholders dated November 25, 1952, the Directors have arranged for further applications and are confident that the issue will be fully subscribed.

Flour Mill.

This plant is now working at full capacity. Substantial orders are held and indications are that this unit will be fully utilised for the coming year. The silo installation became fully operative during the year, resulting in very substantial cost reduction, the benefit of which was received only during the latter part of the financial year.

Stock Food Plant.

This is operating as a most efficient unit, and although some buyers' resistance has been felt because of the higher prices of raw materials in the stock food industry, this department has contributed substantially to the company's profits.

Oat Mill.

This section has been adversely affected by the high cost of oats, raw materials, freight increases, etc., and it is only by the record sales of packet lines that this department has overcome the high manufacturing costs. Turnover in this section is progressively increasing, and indications are that the oat mill and packaging departments will achieve excellent results during the ensuing financial year.

Rice Mill.

The company's rice mill at Yenda was sold during the financial year at a satisfactory price. Despite the loss of this productive unit, increased capacity at our Footscray mills has resulted in an increase in the overall turnover.

Turnover.

Sales for the year increased by 48 per cent. compared with 1951 and exceeded £1¼ millions. Since the commencement of the company's expansion programme in 1949 annual sales have increased by 499 per cent. The plant now being fully operative, the Directors expect a further increase in turnover this year.

Staff Retirement and Benefits Fund.

It has been decided to commence a staff retirement and benefits fund, and to this end the Directors have appropriated the sum of £5,000 from undistributed profits for the foundation of this fund.

General.

The future prospects for the company are viewed with optimism. The company has a modern and efficient plant with a capacity of more than 50,000 tons of finished products per annum in a basic food producing industry. Sales are increasing and this, coupled with efficient operation and management, should ensure the continuing profitability of the company.

Apart from the foregoing, the Directors consider that the year's operations were not affected by items of an abnormal character. They wish to record their appreciation of the excellent work done by members of the staff during the year.

Hawke (Aust.) Ltd.

Manufacturing Jewellers.

Reg. Office: 201-3 St. George's Rd., Northcote, N.16. **'Phone:** JW 6261. **Directors:** M. B. Moffatt (Chairman), N. J. Vieusseux (Manag. Director), A. Neilson, A. Jack, H. L. Richardson. **Auditors:** Fitzgerald & Tompson.

Year ended June 30, 1952. Meeting November 19, 1952.

Profit of £10,742 was considerably lower than in the previous two years as shown in the prospectus. Turnover fell, due to increased sales tax on the company's products and reduction of stocks by retailers in anticipation of alleviation of sales tax in the Budget. Dividend was 6%.

*Adjusted figures from prospectus dated November, 1950.

The business was commenced in 1927, and was converted to a public company in 1950.

The company's range of manufacture in solid gold, rolled gold and silver marcasite jewellery, caters for a wide field of ladies', gents' and children's jewellery accessories.

The main premises at Northcote are being extended and it is anticipated that centralisation of activities will improve efficiency.

"At the present time we are operating on a lower volume of sales than at this stage in the previous year, but have introduced measures calculated to further improve the efficiency, economy and diversity of the company's operations," stated the Chairman, Mr. M. B. Moffatt, at the Annual Meeting on November 19. He said:

In presenting this, the Second Annual Chairman's Address of Hawke (Aust.) Ltd., I desire first of all to refer to the great shock to us all to learn of the death during 1951 of our respected Chairman and Managing Director, Mr. A. E. Hawke. As he was well known to all of us, there is no need for me to emphasise in detail the attributes possessed by Mr. Hawke, except to say that he was a great and good citizen, and his name was pre-eminent in the field of Manufacturing Jewellers, and he was the founder of our business.

Consequent upon his death, I was appointed to the position of Chairman.

The death of our Chairman also necessitated the appointment of a successor as Managing Director. The Board appointed to this position Mr. Norman Vieusseux who, for a number of years, had worked in close association with Mr. A. E. Hawke.

Accounts.

Although the available profit of £10,742 is considerably less than the adjusted profit of £25,176 for the previous twelve months, when for six months the business was carried on as a partnership, the result is considered reasonable, particularly when due allowance is made for the adverse effect of credit restrictions and the substantially increased rate of Sales Tax which resulted in a lower demand for our products. The profit for the year represents an earning rate of 8.34% on paid-up capital of £128,680.

From this profit of £10,742 an interim dividend of 1¾d. per stock unit has already been paid, and your Directors recommend the payment of a final dividend of 1¾d. per stock unit, which will represent a total distribution of 6%.

Since the close of the financial year, stocks have been reduced, thus enabling the company to reduce its liability by way of bank overdraft. At the present time we are operating on a lower volume of sales than at this stage in the previous year, but have introduced measures calculated to further improve the efficiency, economy and diversity of the company's operations.

Factory Extensions.

During the past month, the company has completed arrangements for the extension of its main premises at Northcote, and it is confidently anticipated that the carrying on of all operations at one central point will further improve the efficiency and economy of operations. To assist in the financing of the cost of these extensions, the company has sold a vacant block of land considered unsuitable for the purposes of the company, and has also sold a smaller factory in which the company carried on a section of its manufacturing operations.

Staff.

I wish to extend to all members of the organisation our thanks for their sustained effort during the year. Without their continued co-operation in the company's interest and their good team work, the result for the year would not have been as favourable. Particularly do we thank the technical men of the company for the manner in which they have applied themselves in overcoming the production problems encountered.

The following address by the Chairman, The Hon. D. F. Brand, was circulated to shareholders with the Annual Accounts:

In my report a year ago I wrote of the difficulties in Australia, arising from the inflation which was caused in part from the high prices she was receiving for her exports, in particular for wool. This situation had encouraged the importation in great volume of goods of all kinds, both of consumer and capital nature. The fall in the price of wool, almost as spectacular as its earlier rise, had commenced about April, 1951, and continued through the ensuing season, with the result that the overseas balances of the Commonwealth were diminishing rapidly as payments for imports were made. Finally, in early March, 1952, the Federal Government was constrained to impose severe import restrictions and to take other measures to conserve the falling overseas resources.

This action by the Government was inevitable, and although it caused some confusion and brought difficulties to distributors and exporters in the United Kingdom and elsewhere, there may be some negative comfort in the thought that without the restrictions the result might well have been disastrous, equally damaging to exporters to Australia as to their customers in that country. The recession in world trade found Australia with substantial stocks of imports, as well as locally manufactured goods when selling conditions were very difficult. This situation exerted a strain on the internal finances of the Commonwealth, which was not eased by the necessary continuation of the Federal Government's disinflationary policy, particularly in its control of credit and raising of capital.

In the exercise of its policy, the Federal Government was obliged to refuse to make funds available to the State Governments in the volume which they desired and which, to some extent, were needed to pay for equipment ordered for various capital development projects. Being unable to obtain agreement with the State Governments on the allotment of funds out of Federal resources, the Commonwealth Prime Minister stated that he would hand back to the States the right and function of raising revenue by imposing their own taxes, which, it will be recalled, had been voluntarily relinquished to the Federal Government some years ago. It is understood that a Commission has been appointed to arrange for the new system to commence from July, 1953.

The obligation to meet expenditure by raising their own revenue, and the ensuing political repercussions, may effectively reduce extravagance and eliminate any over-ambitious plans of development which the States may envisage. There are, however, two other aspects which must be the concern of all who are interested in Australia's well-being. Firstly, the return to more complicated methods of taxation must cause a greater unproductive use of manpower, both by the tax-gatherers and by the taxpayers. Secondly, it may delay the improvements in communications and power production and other public utilities which are fundamental to the Commonwealth's development.

A hundred years ago and less, these developments would mostly have been undertaken in the natural course by private enterprise. Today, however, the social and political conscience decrees that a very large proportion of national income shall be taken and spent by the State for many purposes, including the support of a minimum standard of living. Thus the savings of investment capital in the hands of private enterprise are greatly diminished and Governments are obliged to assume responsibilities formerly carried by the entrepreneurs.

That there are great opportunities for development in many directions in Australia cannot be denied, but the cost in materials and manpower will be high. The extent to which Australia will be able to find her share of the necessary capital will depend on her people's conception of their appropriate living standards. There will always be opportunity for capital from abroad, but world conditions and particularly Government Controls tend to hinder its introduction.

In theory the living standards of the salary and wage-earners in Australia are safeguarded by the system which by law prescribes the level of monetary rewards for labour. The process is operated by a system of awards founded on what is known as the "basic wage," which is the minimum wage of an adult unskilled worker. The present basic wage for male workers is approximately £A11/11/- per week, and is adjusted every three months by reference to the official cost of living index.

It is obvious, of course, that movements in the basic wage are themselves greatly responsible for variations in the index, and for this reason alone the system requires to be reviewed. It is not easy, however, to devise a method which is equitable both to employers and employees, and is also practicable and reasonably simple. As certain proceedings are now before the Australian Courts relating to the basic wage and also the 40-hour working week, it would not be proper to comment further at this time. One may, however, conjecture whether present conditions justify the retention of the full £1 per week "prosperity bonus" which was added to the basic wage in 1950 over and above the sum calculated from the cost of living index.

Australia's Overseas Funds and Trade.

At the end of June, 1951, the Central Bank's holdings of gold and balances abroad stood at £A718 millions, but by June, 1952, this figure had reduced to £A303 millions. For this movement a deficit in international trading of nearly £A378 millions was principally responsible. Statistics show that for the year ended 30th June, 1952, imports were £A1,053 millions and exports £A675 millions against £A744 millions and £A982 millions respectively in 1951. Thus an export surplus in 1951 of £A238 millions was turned into a deficit of £A378 millions in 1952. Closer examination of the full statistics shows how great an influence wool trading has on the Commonwealth's affairs, despite the large growth that has taken place in the last decade in other industries, particularly in the manufacturing field.

It is hoped that the import restrictions mentioned earlier will rectify the position before very long, and permit further relaxation in their severity. Last year I related that the terms of trade had moved most substantially in Australia's favour. In the year under review this movement was reversed and the Commonwealth index shows that import prices were by June, 1952, approximately in balance with export prices, both being about four times the pre-war level.

Federal Government Finance.

Revenue for 1951/52 exceeded expenditure by £A98.5 millions but, instead of achieving an anti-inflationary effect as planned, it had to be used to assist in meeting in part the Commonwealth Government's underwriting commitments on loans for public works. The total sum required for these works was £A225 millions, of which the public subscribed only £A63.8 millions, the deficit being met by the revenue surplus mentioned above, and issues of Treasury Bills. For the year 1952/53 the Loan Council has approved of loans for public works totalling £A247.5 millions against the sum of £A225 millions for the previous year, as mentioned above. Whether the Capital Issue market will be able to support the programme to the extent planned is doubtful, judging by the present condition of the market and the experience of the last year when three Commonwealth Loans totalling £A155 millions were offered and, after allowing for conversion operations, resulted in an overall figure of £A20 millions undersubscribed, despite an increased interest rate of 3¾% for longer term securities. At present market prices, Commonwealth Bonds are yielding slightly more than 4½%. Australia obtained a further loan from the International Bank of $50 millions in July last, and it is intended that the funds will be used only for essential national projects.

Primary Production.

So far as it is possible to generalise on weather conditions in a country as large as Australia, it can be said that excepting the Northern areas, the past season was reasonably favourable for the Primary industries. It is hoped that the reduction in wool prices will halt the drift away from general agriculture to sheep farming and proposals to increase production of grains, meat and dairy produce are receiving Governmental support.

Although the wool sold in 1951/52 was only slightly less in volume than the previous year, the value fell from approximately £A636 millions to £A307 millions and the average price per lb. from 144.94 pence to 72.89 pence, both Australian currency. The United Kingdom continues to be the largest buyer of Australia's wool, with the United States of America second, and it is significant that in the last two seasons Japan has emerged again as a very important buyer. Fluctuations in wool prices in the 1951/52 season were considerable, but the first few months of the current season have shown greater stability.

Owing to the substantial reduction in the area sown and to a slight fall in the average yield, the wheat crop estimated at about 161 million bushels was less than the previous year by over 22 million bushels. Australia was, consequently, unable to meet her export quota under the International Wheat Agreement, and her obligation thereunder was reduced from 88.7 to 72.2 million bushels.

A severe drought in the northern parts of Australia caused a heavy loss of beef cattle and production will be affected for several seasons. It was therefore to be expected that the total weight of meat produced in Australia was lower than the year before. Available statistics show that the output for the 11 months to May, 1952, was 859,000 tons, compared with 927,000 tons for the comparable period ended May, 1951. The Commonwealth's consumption of meat continues to grow with the increasing population, and the amount available for export was substantially less than the previous year. Most of Australia's exportable surplus of meat is sold to the United Kingdom under a 15-year agreement, and it is planned to raise production to 1,230,000 tons a year to provide such surplus, as well as care for the rising internal demand.

The total production of whole-milk again fell in 1951/52 to 1,057 million gallons, compared with 1,200 in 1950/51 and 1,242 in 1949/50. Correspondingly, butter and cheese manufactured was less, 131,502 tons of butter and 40,433 tons of cheese against 159,865 and 44,557 tons respectively for the 1950/51 season. The exports of butter in 1951/52 were approximately 10,000 tons, compared with 54,000 tons in the previous year. Cheese exports remained steady at 20,000 tons. The progressive reduction in the Government subsidy on the internal price of butter tends to raise its price to the consumer, and reduce home consumption. This trend, together with the plan to raise whole-milk production to an annual rate of 1,350 million gallons, should produce much larger quantities of butter and cheese for export in the course of a few years.

Dried fruit exports at over 83.5 million lbs. showed a satisfactory increase over the previous year, and apples at 5¼ million bushels exceeded the previous year by 2 million bushels. Exports of lead and zinc were well maintained at the previous year's level or above.

I am glad to report that production of black coal for 1951/52 showed a substantial improvement over the previous year, to a great extent due to the absence of any serious industrial strikes. As a result, imports of coal were reduced and pig iron production increased. It is noteworthy that the higher output of coal was achieved despite the handicap of repeated flooding of certain pits. The drought which affected northern areas caused the Queensland sugar crop to be disappointing, production falling by 100,000 tons to 760,000 tons. The surplus for export amounted to 169,000 tons, compared with the 600,000 tons which is Australia's minimum export quota under the Commonwealth Sugar Agreement.

Secondary Industries and Retail Trade.

Although shortage of power in industry is still to be discerned, supply has improved, partly because of the better coal output already mentioned, and also because electric generating capacity has increased. Installation of modern factory plant continued during the year, but the pace was slower because of the scarcity of capital, and a more cautious outlook assumed by managements, in view of the more difficult trading conditions which were reflected in the fall in the number of employees in Australian factories from 909,000 in June, 1951, to 868,000 in May, 1952. The chief problem now facing the Commonwealth's industries is that of costs and particularly the cost of labour with its quarterly movement as the basic wage is adjusted. This problem was brought particularly to the notice of employers during the year, as public resistance to high prices resulted in a lessening of demand and of turnover for the first time since the War.

Immigration and Employment.

It is reckoned that by the end of 1952 about 700,000 immigrants will have arrived in Australia in the post-war period. The net gain in population by migration in 1950 was 165,377, in 1951, 132,540, and in the eleven months to May, 1952, it was 92,731. Because of the labour situation in which shortages have largely disappeared, it is intended to reduce the number of immigrants to about 80,000 during next year. Although I state that labour shortages have been mostly eliminated, it is not to say that any large-scale unemployment is in evidence. In fact, at June, 1952, only 8,000 people were registered as receiving unemployment benefit. The reduction in the number of employed persons is larger than that figure, but it is believed the apparent anomaly is caused by the permanent withdrawal from the labour force of a considerable number of married women.

To sum up the present financial and economic condition of Australia at the present time, I would say that the impact of a large drop in export income and of a general trade recession was sharply felt, but that the strain was reasonably well withstood. Subject to the minor comments in the foregoing statement, it would be fair to say that we may regard Australia's immediate future and development with sober optimism.

The Bank's Accounts.

The most significant movements in the year disclosed in the Bank's Balance Sheet are the contraction in Deposits and the rise in Advances. Both are symptoms of the financial stringency existing at the date of the Accounts. Deposits fell by nearly £10,000,000 and Advances rose by £12,856,000. These fluctuations were caused to a considerable extent by the need to support heavy stocks of imported goods, but since June the pendulum has started to swing back again and the movement disclosed in the Accounts has been reversed.

It will be seen that Share Capital and Reserves have increased by about £43,000 over the year, and now stand at £5,620,159. Cash in Hand, Bank Balances, Cheques in Course of Collection and Money at Call, total £18,196,000 against £15,741,000 in 1951.

The Special Account with the Commonwealth Bank of Australia is required by law to be maintained with the Central Bank which decides the amount of balance required. Over the year the figure has fallen by £24,367,000, indicating the extent to which funds have been released to meet the situation as bank deposits fell. Bills Receivable reflect the decreased activity in overseas trade and lower prices, having reduced by nearly £4,500,000 to £5,412,362. The lower figures for the Bank's Investments are caused mainly by lower stock market prices.

Under Current Liabilities I have already mentioned the fluctuation from last year in the total of Deposits, etc., and the only other item under this heading requiring comment is the Commonwealth Bank of Australia Special Deposit Account. It represents the funds lent by the Central Bank, and should be considered together with the Special Account already discussed.

The Balance Sheet indicates some relaxation of the Central Bank's control of trading bank affairs, and developments since the date of our statement have disclosed further loosening of the rigid policy which has characterised the official attitude over the years since the early days of the War. In August last interest rates were permitted to rise slightly and, more recently, the Central Bank Advance Policy, which controlled bank lending, has been made less restrictive. These developments are very welcome, as the Banks trading in Australia have shown in the past that they may be relied upon to conduct their affairs in accordance with prudent banking principles in the interests of the community.

Turning now to the Profit and Loss Account, it will be seen that the gross profit at £3,580,337 is £553,407 greater than last year. This improvement, however, has been more than offset by the rise of £571,184 in the Expenses of Management, mainly caused by higher salary and wage rates. The Bank's administration has little control over these items as wage levels are directed by movements in the "basic wage" previously discussed in this memorandum.

After charging other expenses and taxation in Australia and London, the net profit available for distribution amounts to £237,520 out of which £45,000 has been appropriated to the Officers' Provident Fund and £52,500 was paid out as an interim dividend on 31st May last. Subject to the shareholders' approval in General Meeting, the Directors recommend the payment of a final dividend at a cost of £105,000, which will make a total distribution for the year of 10%, less United Kingdom Income Tax. The unappropriated balance of £35,020 added to the balance brought forward from last year will increase the amount to carry forward to next year to £367,951.

It has recently been reported in the Press that the Federal Government intends to introduce legislation to amend the Commonwealth Banking Laws of 1945 in regard to the conduct of Special Accounts and other matters. Details of the proposals are not yet available, but I welcome any move to rationalise certain provisions of the Acts to which I have made reference in previous years.

The Bank's Centenary.

Although this year marks the hundredth anniversary of the Bank's foundation, the date of the Royal Charter which authorised the original establishment was 31st December, 1852. Consequently, the anniversary actually falls subsequent to our General Meeting. I would, nevertheless, like to record the satisfaction which, I am sure, we all feel that our Bank has kept in step with Australia in her march of development and progress. The desire to assist in her advancement and to serve her people is as strong today as it was 100 years ago.

The Bank's Staff.

It is this conception of service which motivates the Bank's Executive and Staff and their efforts are stimulated by competition with our contemporaries. These influences induce enthusiasm, efficiency and pride in achievement. Mr. E. G. Wilson, who heads our Executive in Australia, spent some six weeks in London in June and July, which enabled your Board to have profitable discussions with him. To Mr. Wilson and his Staff in Australia, and to Mr. J. A. Clezy and his London Staff, I send our thanks and appreciation for their continued and successful conduct of our Bank's affairs.

Hanro (Aust.) Knitting Mills Ltd.

Reg. Office: 163-175 Hargreaves St., Bendigo, Vic. **Directors:** Col. The Hon. Sir George Lansell, C.M.G., V.D. (Chairman), A. V. Gray, W. D. Hunter, R. J. V. Stilwell, P. H. McKean (Manag. Director). **Auditors:** Bee & Withers.

2nd Year ended July 31, 1952. Meeting December 9, 1952.

Trading in the first half of the year proved satisfactory but declined in the latter half. Although the year's turnover was a record at £532,659, profit fell by £11,000 to £6,798 and ordinary dividends were reduced from 6½% to 3½%.

	1952.	1951.	1950.*	1949.*

*Adjusted figures from prospectus of March, 1951.
†Div. at 3½% on original 46,428 ordinaries, amounting to £1,625 was paid from taxed profits reserve.

Despite difficult trading, stocks were held steady. Overdraft rose by £32,706 and arrangements are being made for a 10 years debenture of £50,000.

Operating knitting mills at Bendigo since 1920, the company markets its products under the well-known "Hanro" trade mark. It was the pioneer in Australia of the production of high-grade women's and children's knitted underwear. It also manufactures knitted outerwear.

The Chairman, Sir George Lansell, addressed the Annual Meeting of shareholders on December 9 as follows:—

As you all know, we have passed through a most difficult trading period, but notwithstanding this, your company has been able to earn a profit which, in view of all the circumstances, your Directors feel is satisfactory. The result could have been quite different, as the disclosed trading results of so many kindred industries indicate.

Last year this company received a Certificate of Merit from the Australian Institute of Management, Sydney, for the way in which it prepared and presented the company's affairs to the shareholders. We have again this year endeavoured to maintain the high standard established in our initial year as a public company. Your Board believes that as much information as possible should be passed on to shareholders in the simplest possible form.

In view of the information already supplied I shall confine my remarks to matters of major importance only.

Late H. F. Longstaff

It is with deep regret that we record the death by accident on February 21 of the company's late Managing Director, Mr. H. F. Longstaff. He was one of the founders of the Hanro Company, and its development was to a very large extent due to his untiring efforts since the days of the company's incorporation in 1926.

Accounts

I shall now comment on a few of the figures contained in the profit and loss account and balance sheet. Sales for the year at £532,659 established another record. The net profit available for distribution after tax provision this year, however, was lower at £7,779. Tax provision is £7,606.

Trading for the first six months of the year was most satisfactory and easily constituted a record for the company. Indications up to November last year were that we would have a record year in every way. Unfortunately, due to customer resistance and loss of confidence generally by all sections of the community, the last six months proved to be a real testing time, and many major problems had to be dealt with and overcome. Orders were not sufficient to maintain some departments at their full budgeted production level, and staff had to be reduced as a consequence. Falling raw material prices also contributed to our difficulties.

Dividends

Dividends have been declared by the Directors as follows:—3½% on the ordinary shares, and 8% on the cumulative preference shares. The whole of the preference dividend, and the ordinary dividend on shares numbered 46,429 to 178,332 will be paid from earnings of the year ended July 31, 1952, while the ordinary dividend on shares numbered 1 to 46,428 will be paid from taxed profits reserve. These are the only ordinary shares entitled to participate in dividends against this reserve.

Stocks

Stocks are in good order, and have been written down where necessary. In any case they do not exceed the cost or replacement price, whichever is the lower. Stock figures were substantially the same as at July 31 in the previous year. We anticipate that we should be able to effect a substantial decrease in our comparative figures during the next six months as we are buying raw material only as and when required in view of the fact that raw materials are somewhat easier to obtain than they were twelve months ago. However, this does not mean that we can obtain immediate delivery for all classes of raw materials. In some cases it takes up to three months, even to-day, to obtain local supplies, and with the necessity of obtaining an import licence under Import Licensing Regulations a considerably longer period elapses before overseas raw materials are available. Fortunately, up to the time of writing this report, raw materials of all descriptions seem to have stabilised, and the two principal yarns used by us, namely, cotton and wool, have shown firm tendencies. The fact that wool has remained steady throughout the initial selling period has had a most heartening and encouraging influence on trade generally, and providing it is maintained, it should not be long before trade returns to normal conditions. Nobody wants to see wide fluctuations in prices, either up or down.

We are of the opinion that the public cannot, in the immediate future, expect to buy cheaper clothing than that being offered to-day. The only factors which could bring this position about would be a substantial drop in the basic wage and/or a substantial fall in wool, cotton and rayon prices. However, there is no indication that any of these conditions will occur in the near future.

Income Tax

The high rate of income tax is proving a tremendous burden for industry to carry, and in these days when profits generally are inclined to be lower than formerly, the high taxation rates being imposed on companies, both private and public, appear to be quite unjustified. Our figures show that almost 50% of the profit earned for the year has to be transferred to a Provision for Tax Account. We feel that the Federal Government should give immediate consideration to the matter of giving some relief under this heading, as otherwise it would appear that industry cannot expect to develop as rapidly as it should in this country.

Land and Buildings

The building on the corner of Mundy and Hargreaves Streets, which is being built to our requirements by the owner of the property, is being partly occupied at the present time, and it will not be long before the building is finally completed. The building is undoubtedly a very fine structure and should prove to be an acquisition to the company.

Plant and Machinery

A minimum of new units has been added to the company's plant and machinery during the year. You will be interested to know that practically no time whatever was lost during the year due to electricity blackouts and restrictions as our own generating unit kept our plant in operation.

(Continued on next page)

HANRO (AUST.) KNITTING MILLS (Contd.)—

Price Control

Since our last annual meeting price control in Victoria has been discontinued in our industry, and we believe that this will have the effect of allowing business to function more normally, and should prove a benefit to manufacturers, retailers, and the consuming public alike.

Capital

I would like to emphasize here that the total shareholders' funds employed by the company are £275,035. Total paid-up capital is £193,332 only, and reserves total £81,703, which means that our ordinary shares, after excluding goodwill and making provision for dividends and ordinary company tax, have an asset backing of 28/2 per share.

During the period under review the Board had to give consideration to the desirability of obtaining additional working funds, and with this object in mind we approached the Capital Issues Control Board towards the latter part of 1951. Permission to obtain additional funds was refused. However, since our financial statements and report have gone to press approval has been given by the Capital Issues Control Board allowing the company to obtain £50,000 against a first mortgage debenture, redeemable over ten years. The amount is being advanced by one of the leading Life Assurance Offices. The Board would like to express here their appreciation to the management of the English, Scottish & Australian Bank Limited for the assistance extended to the company during the difficult trading period through which we have just passed. Like most public companies we have found that high wages, raw material prices, etc., have strained our financial resources to the limit. The arrangements recently completed, however, should materially assist in stabilising our finances. The Board feels that the arrangements made are in the best interests of the shareholders. In my previous report I indicated to you that the Board believed that paid-up capital should be kept as low as is reasonably prudent, as it ensured greater security for shareholders in the form of higher dividends.

Overseas Visit by Factory Manager

Our Factory Manager, Mr. F. Harris, is at present overseas. He paid a short visit to the United States on his way to England and the Continent. The purpose of the Board in sending Mr. Harris overseas was to permit him to study the latest trend in raw materials, plant and machinery, production methods, and conditions generally in the Textile Industry in the U.S.A., England and Continental countries. We are confident that such a visit will pay big dividends to the company as Mr. Harris will, we feel sure, be able to bring back with him many ideas which can be effe tively used by our company. Our Swiss friends, Messrs. Handsch & Ronus, who as you know are substantial shareholders in th company, have undertaken to give him all the assistance possil during his stay on the Continent, and we feel sure that consid able benefit will result for both companies from his personal conta with their executives and staff. The Swiss Company has be extremely co-operative and helpful to us, and I would like here express the Board's sincere appreciation.

Prospects

Trading conditions during the first few months of the curre financial year have been more difficult than formerly, but indicatio are that business is showing a strong upward move, and orde being received for next winter are most encouraging.

Since our last meeting we have concentrated on developing o department making ladies' fashion goods, and at the same time a endeavouring to maintain production of lines previously made. W have also been successful in developing a new process for pr setting woollen fabrics, and have registered the word "permasized As a result of this process we are now able to stabilise woolle fabrics prior to being cut, which ensures that the finished garme does not vary in size providing it receives normal washing trea ment. Import restrictions also should have the effect of stimula ing interest in Australian-made goods. As you know, the count was flooded with imported knitted goods of all descriptions la year, to the detriment of the Australian industry. These exce stocks appear as though they are gradually being absorbed, and th together with the more optimistic outlook in trade generally shou have a beneficial influence on the textile industry. We are impro ing our production methods the whole time and this is one wa in which we are able to offset the continually increasing cost production.

Generally speaking, your company is well equipped to cope wi the business offering, but it is necessary to keep adding mo modern units continually in order to keep abreast of competitors.

Staff

Before concluding I would like to express the Directors' appr ciation of the loyal, efficient and energetic service given by th executive, office, selling and factory staffs. The past year has i some instances been a particularly difficult period for many them, but they have without exception continued to give the loy service which we expect from Bendigonians. As I pointed out i my report last year, almost without exception the highly-traine technical staff are local citizens and most of them have spent th whole of their working life with this company.

Hopkins Odlum Holdings Ltd.

Reg. Office: 268-270 Geelong Rd., West Footscray, W.12. **Share Office:** C/o Fitzgerald & Tompson. **'Phone:** MW 1391. **Directors:** L. G. Odlum (Chairman), G. P. Odlum, E. A. C. Wade, G. E. Fitzgerald. **Auditors:** Wilson, Ross & Co.

1st Year ended December 31, 1952. Meeting February 27, 1953.

Operating for the first time as a public company, the organisation earned a profit of £26,720, which was less than in the previous two years, as shown in the prospectus. First ordinary dividend was at the rate of 8% per annum.

Hopkins Odlum Holdings Ltd.

At the Annual Meeting held on February 27, the Chairman, r. L. G. Odlum, delivered the following address:

The profit for the year should be considered satisfactory con-idering the adverse conditions under which we operated. The re-ssion in sales, experienced by all business, was of course felt this Company, particularly in the last quarter. Increased manu-cturing and administrative costs, due to cost of living adjust-ents, were largely beyond our control.

Our industry is one which depends upon all those people in ustralia who use machine belting, and our sales cover the follow-g industries: Steel, coal, timber, brick, textile, dairying, farming d others. In every corner of Australia you will find our products in use, but you can quite see that when the wheels of industry slow down, then the demand for belting must dwindle. A very small percentage of increase this year in the activities of industry generally would have a considerable effect on our sales and profits.

Finally, I just wish to say a word or two about the employees in our establishment who produce or sell the goods which we make. Our employees in factory, warehouse and office gave excellent service throughout the year just ended, although they did not enjoy overtime payment which they had been receiving for very many years. All of these people played their part throughout a difficult year, and I am happy to have this opportunity of paying a tribute to them.

Warrnambool Woollen Mill Co. Limited

g. Office: South Warrnambool, Vic. **Directors:** D. Fletcher Jones (Chairman), J. Bennett, E. E. Ladner, E. C. Edwards, N. K. Morris, C. J. McIntyre. **Auditor:** R. W. Mack.

3rd Year ended September 30, 1952. Meeting December 8, 1952.

Turnover fell considerably, due to the flood of imported xtiles and buyer resistance following the fall in wool prices. espite a loss of £26,536, preference dividends of 5% were id, together with an ordinary dividend of 3¾%. In 1950-51 % was paid on both classes of shares.

The following report was presented to shareholders by the Chairman, Mr. D. Fletcher Jones, at the Annual Meeting on December 8:—

In comparison with recent years, sales show a considerable re-duction, due to the flooding of the local market with imported tex-tiles. Buyer resistance strengthened following the steep fall in the wool market; however, the stabilising of the wool market has given the public confidence in buying and there is now an improved demand for the company's products.

Reduced Production

Due to the rapid accumulation of blanket stocks, it was neces-sary earlier this year to reduce normal output substantially, and the result was an increase in the ratio of overhead expenditure to total sales, this inevitably affecting the year's trading results.

Advertising

Our policy of advertising on a national basis has been continued at the stage where Warrnambool products are favourably known throughout the Commonwealth.

Progress

The company's programme of progressively installing more efficient plant proceeds and plant and buildings have been effec-tively serviced and modernised.

To safeguard the company's interests, the Mill has been en-closed with wire fencing and entrance gates erected.

Personnel

After many years of faithful and efficient service, Mr. W. Spiller, our Sales Manager for Victoria and Tasmania, was obliged to resign due to ill-health, and Mr. T. Ring, who has been Assistant Sales Manager for four years, has been appointed as his successor.

Trading Results

The accounts for the year, after providing £14,836 for depreciation, show a net loss of £25,907.

£12,103 has been transferred from General Reserve to the Appropriation Account, which, together with £20,275 brought forward from last year and excess tax provision of £3,081, leaves a balance of £9,552 available in Appropriation Account.

£5,375 has been transferred from General Reserve to cover depreciation on the amount of £175,000, by which plant and buildings were written up last year.

Dividend

Your Directors recommend that a dividend be paid of 3¾% on ordinary and 5% on preference shares. This will absorb £5,883, leaving a carry forward in the Appropriation Account of £3,669.

Future Prospects

Actual orders already received will keep the Mill employed at its present rate of output until April, 1953.

With our stocks competitive in both quality and price, and with new and original designs in our products, we face future trading with confidence.

Staff and Employees

Your Directors wish to record their appreciation of management and employees for their loyalty and co-operation in such a difficult year's trading. Employee-management relationships are most amicable and this valuable spirit of teamwork continues to grow.

Unfortunately, the trading loss for the year has not made it possible to grant the normal bonus to management and employees in recognition of their efforts, but your Board looks forward to a return to trading conditions when such payments can be resumed.

Trading operations have not been materially affected by abnormal items or conditions, other than those mentioned in the above report.

Lamson Paragon Limited

Manufacturers of Counter Sales Books, Carbon Copy Books, Continuous Stationery, Office Systems, &c.

Reg. Office: The Boulevard, Richmond, Vic. **'Phone:** JB 3331. **Directors:** L. E. Lloyd (Chairman), G. S. Upstill (Manag. Director), P. J. W. Danby, G. D. Young, Major-Genl. C. S. Steele, H. F. Walsh. **Auditors:** Brentnall, Mewton & Butler.

55th Year ended October 31, 1952. Meeting December 19, 1952.

Consolidated profits were higher on augmented capital, and dividend was maintained at 10%, absorbing just over half of the year's profit.

"The sudden imposition of import controls did cause us some concern, but we are glad to say that we were able to achieve a record output of our products," stated the Chairman, Mr. L. E. Lloyd, at the Annual Meeting on December 19. His address reads:

I would first convey to you an apology from Mr. G. D. Young, one of your Directors, who is overseas at present.

In these difficult times when manufacturers in practically all industries are faced with many and such complex problems, it is particularly gratifying to your Directors to submit to you a balance sheet for year to October 31, 1952, which shows such good results.

Profit not only provides for a continuation of the usual rate of dividend on the old shares but also a pro-rata distribution at the same rate on the partially paid new issue. Our reserves have been strengthened by the appropriation of £25,000 and an amount of £23,435 has been added to the employees' superannuation fund creating a balance therein of £75,000.

Trading Conditions

The general condition of trade in our products during the financial year has changed from one of very heavy demand to one nearer to normal. For a long period running into the year under review, demand was so heavy that our production capacity was exceeded and long delivery schedules had to be stipulated in accepting orders. The resultant "back log" of orders was gradually overcome and we are now in a position to handle expeditiously all business offering.

As you are all doubtless aware, there has been, for some months a general feeling of uncertainty and a falling-off in business volume in many industries. This has been noticed to some extent in our business. Steps have been taken, in fact were taken some time ago, to strengthen our sales organisation. Without being over-optimistic, I think we can say we have noticed a definite trend toward improved business.

Raw material supplies have been well maintained, but under somewhat unusual circumstances. The sudden imposition of import controls did cause us some concern but we are glad to say that nevertheless we were able to achieve a record output of our products. Some losses were sustained due to the recent fall in paper costs from most overseas markets still subject to import control. I would like to say here, a word of appreciation to the various Australian Paper Mills for their willingness to manufacture a number of grades of paper, supply of which was closed to us by reason of the controls.

There is a general impression that a substantial fall in paper prices has taken place. This actually is a superficial impression because a greater proportion of our requirements must be drawn from the Australian market which is on a considerably higher price level than most other countries today, and the quantity which import control permits us to procure from overseas markets is comparatively small.

Subsidiaries

All branches of the Company and the Western Australian subsidiary company, so ably managed by Mr. Edward, contributed to the satisfactory results for the year's operations. The New Zealand subsidiary company completed its first full operating year resulting in a loss of moderate proportions, but this, from past experience of entering new territory, was expected. However, operations over the full range of our products only commenced late in the year, on the expiration of a restrictive agreement. Furthermore, we are still held up to some extent by the non-arrival of an important machine. Meantime, the New Zealand sales organisation has achieved good results and it is hoped that the profit earning phase will be reached earlier than in the case of any previous new development of the Company.

You will notice that the financial position is strong and here I would particularly like to draw attention to the reduction in overdraft from £217,797 last year to £14,936. Actually because of delays in arrival of some plant included in our budgetary programme and other factors, it would have been convenient for the Company to have delayed the call on the new issue recently made. However, the necessary consent to this postponement could not be obtained from the Authorities.

New Factory

I would like to tell you something of our new factory at Kingsgrove, Sydney, which as I reported to you at our last meeting had then just been completed, except odds and ends inescapable in a building of that kind. The building is now complete in all detail and although I may be somewhat biased, I venture to say, as a modern factory it is, for its size, second to none. To celebrate the first anniversary of the new factory's opening, the employees were entertained in August last by the management. Your Directors were represented at the function, a very successful one very well attended.

You will, I am sure, be interested to know that advantage was taken of the occasion to make a suitable presentation to our worthy Sydney Manager, Mr. A. D. Epstein, who has completed 50 years' service with the Company and who I am glad to say is still strenuously engaged in his important post.

Staff

In regard to long-service employees, your Managing Director is, with the full concurrence of your Board, arranging for some form of recognition to these old hands. Apart from Mr. Epstein, we have one other employee now retired who had completed 50 years' service—Mr. M. Lane; and no less than 45 who have completed 25 years. These facts you will agree speak well for "Lamson" conditions and it gives me great pleasure to record the Directors' appreciation of the loyal service given to the Company by all its employees from the highest right through the whole organisation.

National Mutual Life Association of Australasia Limited

INTEREST RATE UP — EXPENSE RATE DOWN — BONUSES MAINTAINED

83rd ANNUAL REPORT SHOWS YEAR OF SOLID PROGRESS.

The Annual Meeting of Members was held at the Registered Office of the Association, 395 Collins Street, Melbourne, on March 17.

At the request of the Chairman of the Association, Sir Harold Luxton, who is recuperating from illness, the Vice-Chairman, Mr. V. Y. Kimpton, presided, and said:

The Report and Accounts placed before you today amply show that the Association has continued its sound progress during the year under review. The prospect as our year opened in the last quarter of 1951 could not be described as promising. We were witnessing the collapse of wool prices which mean so much to this community. Counter inflationary action had already been taken by the Federal Government, and there was every indication that the feverish artificial post-war prosperity to which we were becoming accustomed was ending. Then there followed the import-export crisis and a marked slowing down of economic activity. Nevertheless, the full effect of inflation upon salaries and wages through further rises in the cost of living had still to be experienced. As a result some part of the additional new assurances required for superannuation purposes under the many subsidised plans conducted by the Association was due to inflation, but that phase in our affairs is settling down to more normal proportions and life assurance, as hitherto, is still a necessity which has to be "sold." It is anomalous in these times of high taxation and heavy probate duties that those who most need life assurance are frequently the most difficult to convince!

The circumstances that precipitated such violent economic and monetary changes in Australia also affected, in varying degrees, the other parts of the British Commonwealth in which we conduct business.

Record New Business — £42 Million.

In all the circumstances and making full allowance for the element of inflation, it is highly satisfactory to be able to report that the assurances granted during the year reached a new high record of £42 million. For this our Branch and Agency Managers and their Field Organisations deserve the highest praise. They are performing an important national service.

There has been much speculation regarding the results and the benefits likely to accrue from the recent Commonwealth Economic Conference. One definite conclusion reached, however, was that the flow of capital necessary for the economic development of the Commonwealth countries must come largely from "internal" savings, and it has been made clear that if the development of Australia is to proceed we, ourselves, must find the major portion of the capital required. Without going deeply into the economics of the matter, this means that the necessary funds must come from the personal savings of the moderate income earner, i.e., the community at large. It is here that life assurance institutions can play their part by collecting the savings of the people in life assurance premiums and thus supplying this capital, at the same time affording life assurance protection.

The fact that in Australia life assurance premiums up to £200 per annum are allowed as a deduction from assessable income for income tax purposes is tangible evidence of Government support for the life assurance method—the surest and best method of systematic saving.

Land Taxes—Remission of State Taxes Sought.

During the year the Federal Land Tax Legislation in Australia was repealed. Whatever the merits of this tax otherwise, it was quite inequitable in the case of Life Assurance offices. Life offices hold land (1) as sites for the buildings in which they conduct their day to day services to the public; (2) as owners of homes, flats and office buildings, providing accommodation for tenants who are not in a position or who do not wish to provide buildings of their own. To tax heavily such land sites as these is merely an imposition on the savings of provident Australians with limited incomes who have sought to acquire a modicum of financial protection through their Life Assurance policies. Under Federal Land Tax the position was that it alone absorbed the whole income value of the land site without allowing anything for rates and other outgoings and a reasonable return on the policyholders' funds.

It is therefore disturbing to note that some State Governments in their search for revenue have already substantially increased State Land Taxes; some of these taxes suffer from the same objectionable features as the discontinued Federal Tax—aggregation of parcels and a sliding scale of tax rate. The Federal Legislation at least provided for an exemption in respect of a Life Office's own occupancy of its buildings, but State Legislation makes no such allowance. It would be a pity if the release from an inequitable Federal Tax is merely to be replaced by even more inequitable State Land Taxes. Heavy land taxes have made it uneconomical to develop flat and housing projects or to extend commercial and office accommodation in the cities of the Commonwealth, all of which are essential to national progress. It is to be hoped that State Ministers will give thought to the position of life assurance policyholders and exempt the Life Offices from this type of taxation or at least grant a substantial degree of relief.

THE YEAR'S ACCOUNTS.

Income £13,600,000.—The total net income in round figures amounted to £13,600,000. Revenue from premiums advanced by £1,075,000 to £10,464,000, and from Interest Dividends and Rents by £284,000 to £3,479,000 before deduction of Rates and Taxes. The effective yield upon the Assurance Fund was £4/2/8 per cent. or 1/4 per cent. more than for the previous year. Rates and taxes, chargeable to interest which vary from year to year, were relatively heavier and the net yield rose from £3/14/1 per cent. to £3/14/6 per cent. The upward turn in the yield, although modest as yet, brings promise of better results for members provided the mortality experience and the costs upon which surplus earnings also depend, continue to be satisfactory.

Outgo.—Payments to policyholders or their representatives amounted to £5,412,000. Of this sum, claims by death called for £2,060,000 and by survivance for £2,333,000. The mortality experience was favourable. Surrenders at £901,000, which include returns of contributions paid under superannuation schemes, were not excessive.

Expenses of Management increased by £98,000. It is remarkable that the whole of this sum with the exception of £2,800 was occasioned by increases in salaries and wages which were almost entirely necessitated by cost of living increases under awards in Australia and elsewhere. Otherwise, general expenses have been well controlled, and the percentage to total income after deduction of single premiums fell from 12.94 per cent. to 12.35 per cent.

To complete my references to the Revenue Account, I should mention that a sum of £40,000 has been written off Office Premises to cover the cost of alterations and improvements long overdue to our New South Wales Branch and other premises, and this being our Investigation Year, £115,000 has been written off other assets and £650,000 transferred to the Investment Contingencies and Exchange Reserve. After giving effect to these allocations the Assurance Fund increased by over £5,660,000 to approximately £88½ million.

The Balance Sheet.—Liberal provision has been made in the Balance Sheet for all accrued and outstanding expenses and for claims and contingencies, and assets now total £94½ million. The outstanding change in the Assets is an increase of £5¾ million to £28,679,000 in the amount invested in loans on mortgage. Our holdings of Government Securities and Loans to Public Bodies account for 49 per cent. of our invested funds and show little change. The Loans on Mortgage together with Loans to Building Societies, Building Society Shares and Policy Loans take a further 42 per cent. of the invested funds. Of the remaining £8¾ million, £3 million is in Real Property and the balance in Debentures and Debenture Stocks, and Preference and Ordinary Stocks and Shares.

The Triennial Investigation.—In addition to the usual accounts we have also before us today the report of the General Manager and Actuary on our Triennial Investigation. It sets out for your information the bases of the Actuarial valuation of the liabilities and of the values placed upon various classes of assets in the Balance Sheet. In times of uncertainty it is more than ordinarily important to know how the values placed on Assets have been assessed for Balance Sheet purposes and in ascertaining profits or surplus. As everyone knows, a heavy recession occurred last year in the market prices of all classes of securities and prices touched bottom at the end of September when our Investigation was due to be made. In these circumstances, the bases upon which the Assets have been taken into the Balance Sheet are of more than usual interest. They are:

Stock Exchange Securities: Government Securities, Municipal Debentures, Loans to Public Bodies, Debentures and Debenture Stocks, having fixed redemption dates, have all been taken at or under cost and not above par.

Interminable Stocks and Preference and Ordinary Stocks and Shares have also been taken at or under cost at values which in no case exceed and in the aggregate are substantially below their market values on September 30, 1952.

Loans on Mortgage, Reversions, etc.—All Loans were examined and found to be satisfactory and fully secured. A Special Reserve is held at additional security. Outstanding interest has not been included as an Asset in the Balance Sheet.

Freehold and Leasehold Properties are valued at their cost prices less amounts written off, and stand in the books at a very conservative figure.

Valuation of the Liabilities.—The total sums assured (including bonus additions) in force at the date of valuation amounted to £301 million, and it is worth mentioning that this figure is 50% greater than it was only four years ago. The Policy Liabilities were again valued on a strict net premium basis assuming interest at 2½ per cent. for all Assurances, Endowments and Immediate Annuities.

The Surplus.—The total surplus for the valuation period of three years, including £258,622 carried forward from the previous occasion, was found to be £5,968,091. From this amount there has to be deducted the sum of £650,000 transferred to Investment Contingencies and Exchange Reserve and the cost of the bonuses allotted at September 30, 1950, and September 30, 1951, leaving an available net surplus of £2,119,107.

Bonus Rate Maintained.—Your Directors have decided to apply £1,840,000 of this sum to provide reversionary bonus additions amounting to £2,900,000 to members' policies upon the same scale as has now been maintained for six successive years, and to carry forward unappropriated the balance of £279,107.

THESE ARE OUTSTANDING RESULTS, and I am sure that you will agree that we have every reason to be satisfied with them.

The Bonus Scale has been maintained without undue strain. That in itself is an achievement, and I think I can say that there is now some reasonable prospect of an increase in the bonus scale provided interest rates can be maintained and the other features of our business continue to be favourable.

Staff.

In conclusion, I desire to acknowledge on behalf of the Board and express our appreciation of the services of the General Manager, the Executive Officers and all members of the Indoor and Outdoor Staffs.

N.Z. Forest Products Ltd.

Evidence that the company had pioneered the use of New Zealand's exotic forests to a considerably greater extent than had been attempted or so far contemplated for any other area of forests was provided by the Chairman and Managing Director, Mr. David Henry, at the 16th Annual General Meeting on November 28 last. In the most striking and comprehensive address yet given to the shareholders, Mr. Henry stated:

Shareholders have always taken a keen interest in the affairs of this company, and many thousands who cannot attend personally send in their proxies, frequently with comments and criticisms. Those are most helpful to your Directors, and remind us also that we are virtually trustees for a very large international group of people who almost completely rely on us to prudently, and yet in an enterprising way, manage the affairs of this company. We think it is well to stress the very wide international shareholding in this undertaking, as it not only presents unusual problems in management, but even more importantly we consider it warrants a special degree of sympathetic understanding from the Government at all times towards the many thousands of people, non-resident in New Zealand, who have invested money in those forests. They did well for New Zealand in doing so, and we hope New Zealand will always fully reciprocate.

Profit.

The profit for the year, including forest revenue, is a record one of £275,038, after making provision for Income Tax. The substantial upward trend over the previous year is due wholly to the relatively greater volume of production and sales. By any New Zealand standard, the profit earned is a good one, but, as the company has a paid-up capital exceeding six million pounds, it is quite clear that we have some headway to make yet before we can say the full task of forest utilisation on a profitable basis is completed. Nevertheless, we are grateful for the marked progress that has been made and, with the near completion of all new projects, including the Kraft Pulp and Paper Mills, we believe further upward progress is reasonably indicated.

Reserves.

During the ten years of the company's manufacturing history, reserves have been accumulated in excess of £1 million, while in the same period, plant has been written down by nearly £700,000. At the same time, the forests have been well cared for and the volume of timber resources has increased very considerably. Altogether shareholders are in a very much stronger position than ever before and, despite passing difficulties, your Directors have every confidence that the company's future activities will prove of the utmost benefit both to shareholders and the national economy. In the international field, trees and their products are wanted more than ever before and, whether in peace or war, they are of growing importance to mankind.

Preference Dividend.

Reserves having now been built up to over £1 million, your Directors recommend that a first dividend of 3½% should be paid on Preference shares. The amount required to meet this payment of approximately £35,000 is less than one half of the forest revenue recovered for the year, apart from manufacturing profits. It is a very modest payment in view of the profits earned, but we remind shareholders that substantial payments have yet to be made for plant, etc., before all new mills are completed and a policy of caution regarding dividends seems clearly indicated.

Staff.

We take this opportunityt to pay tribute to our numerous empoyees for their excellent work. It has been a trying and abnormal year in many ways—supply difficulties and unusually wet weather have hampered progress of new works, and we acknowledge our indebtedness to them and also to our executives for their special efforts in overcoming numerous problems with tenacity and cheerfulness. Apart from the subject of Forestry Income Tax Assessment which is receiving special consideration from the Taxation Department, several new matters of importance are calling for attention.

Licensing of Industry.

The difficulty of developing new and expanding industries, such as pulp and paper manufacturing, which come under the restrictions of the Industrial Efficiency Act, has been exercising the minds of your Directors recently. Licensing of industry was introduced by the Labour Government in 1936 with the intention that it would protect and foster growing industries. The view of the present Government is that industry would benefit by the progressive removal of this restrictive system, and many industries have since been de-licensed, but those do not include the production of pulp and paper. We have instead been recently advised by the Bureau of Industry that it has prepared a suggested "new" charter for the control of those industries, and while we agree that it would make for greater clarity and simplicity, we consider the new proposal is still too restrictive, and your Directors are firmly of the opinion that pulp and paper production should no longer be licensed. If, however, the Government does not wish to take the full step suggested, we believe there should be a very substantial freeing up of pulp and paper licences, so that your company can produce a wider range of products and make the fullest use of our various modern plants.

We trust this meeting of shareholders will concur with the view that the company should now be freed from all unnatural restraints and be permitted in future to carry on its operations with the same freedom as applies to practically all other manufacturing industries. Indeed, we know of no other way whereby the full utilisation of the forests can be substantially advanced. Some past decisions of the Bureau of Industry have unduly restrained progress in both research and manufacturing developments, and we cannot see how forest industries can properly expand and play the important part they should play in our national economy and in the full development of Empire resources unless pulp and paper manufacturers have the fullest control over their own development.

We acknowledge most readily the helpful interest and co-operation of the present Government in various ways and, in the belief that members desire to assist the maximum use of our forests, we urge that a substantial and preferably a complete freeing-up of the licensing system is given effect to without delay.

Exports to Australia.

Reciprocity in trade has also been brought sharply home to N.Z. sawmillers in recent months by the reduction of our timber trade with Australia. Compared with New Zealand's total exports the money value of the trade is not perhaps significant, but the loss, we hope temporary only, of those exports is unfortunate and coincided with the completion of a number of new sawmills which had been established in New Zealand to meet domestic and overseas demands. We understand Australia sells to New Zealand about £35 million of goods annually and buys only £5 million worth in return. There is ample need, therefore, for the re-balancing of trade between the two countries, and we would expect it to come by way of New Zealand sending substantially increased goods to Australia rather than through reducing imports from that country. It can be done very readily by Australia favouring the importation from New Zealand of timber, pulp and newsprint. Those materials are now or can be readily made available, and we express the hope that, following the conference of Prime Ministers being held in London, we will see immediate practical steps taken by both Governments whereby exports of timber, pulp and paper to Australia are very substantially increased. We know of no simpler or better way to remove the existing disparity of trading, or one which will help Britain and the Commonwealth more. We look forward, therefore, to this particular problem being promptly settled between both Governments so that New Zealand's exports to Australia will be quickly resumed and substantially increased.

Overcutting of Native Trees.

The last special problem we wish to comment on today relates to the overcutting of New Zealand's native trees, which will soon become exhausted if persisted in. The practical solution is to reduce the cut of native timber and meet the demand by using exotic timber to the maximum. Only in this way can the country's forest resources be harvested to secure the most economic result and serve the best interests of the people. In general, we support the measures advocated by the Minister of Forests to conserve native timbers and to make up the leeway by a corresponding increase in the use of pine.

Some 8,000 men are at present employed in sawmills, and any displaced by the reduction of native sawmilling could be transferred to pine sawmills. The pine milling industry, in response to Government appeals for increased production in the post-war years, responded magnificently, output having been nearly trebled, and no time must be lost in diverting more orders to pine sawmillers, thereby reducing the drain on the dwindling native forest reserves and by exploring all means for achieving a high volume of exports.

Pulp and Paper Mills.

During 1952, excellent progress has been made in the establishment of both the Pulp and Paper Mills. All other new projects are now completed and we expect the Pulp Mill to begin production early next July and the Paper Mill in September. Electricity supplies should then be fully available for all the company's requirements. We are at present engaged in appointing the balance of key workers required for those mills. They will come from various overseas countries, and during the next few months several hundred newcomers should arrive at Kinleith to help to operate those industries, and we expect them to become good New Zealanders. Arrangements are now under way for large regular shipments of pulp to Australia, and these should begin next August. We believe this will herald the beginning of a substantial new export trade which should steadily grow in the future and prove of considerable benefit to both New Zealand and Australia.

Before concluding this report, I would refer to the many questions which reach us from time to time regarding the company's various mills and manufacturing units—annual output, number of employees, future policy, finance, etc., etc.—and, so that all shareholders may have a clear picture of their undertaking, I would advise that:

Production Potential.

The Wallboard Mill operating at Auckland can produce in excess of 60 million sq. ft. of Pinex building board per annum, or approximately 20,000 tons.

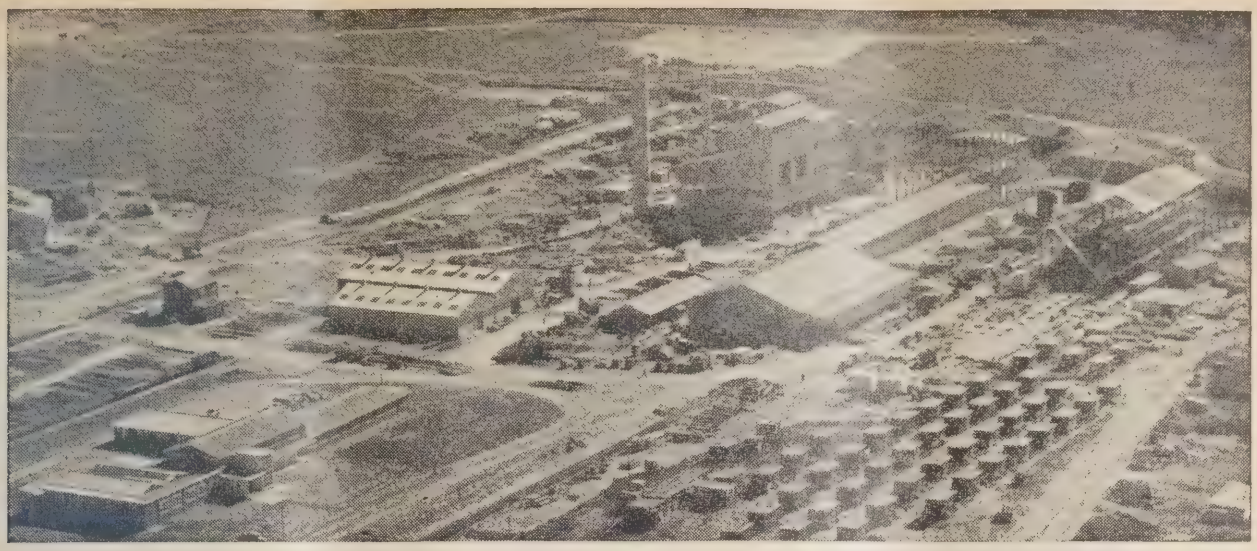
The Multi-wall Bag plant operating at Auckland can produce up to 25 million bags per annum. The company has the exclusive N.Z. licence for the internationally famous Bates patents.

The Corrugated and Solid Container plant at Auckland can produce 10,000 tons of corrugated and solid containers per annum. It will begin production in January, 1953.

The Casemill at Auckland manufactures approximately 1 million wooden cases per annum, using 6 million ft. of timber.

The various Sawmills operated by the Company can produce 60 million super ft. of timber per annum.

The Shook Mill at Kinleith will convert 5 million super ft. of timber into 800,000 cases in shook form per annum. (Shooks are wooden cases cut to size but not nailed.) This plant will operate in January, 1953.



The Veneer plant near Kinleith can produce 8 million sq. ft. of eneers, when new plant now in store is installed early in 1953. resent output is slightly over 4 million sq. ft. per annum.

The Kraft Pulp Mill at Kinleith can produce 45,000 tons unleached sulphate pulp per annum. Production should commence July, 1953.

The Paper Mill at Kinleith can produce 25,000 tons of paper r annum. Production should commence in September, 1953.

The Pressure Preservation Plant at Pinedale can pressure treat million super ft. of timber per annum, and is now operating.

(The company has exclusive licences for the long-established ritish "Celcure" process and also uses creosote as required.)

The combination of the above mills makes up a set of cometely integrated plants so that all timber is used to the best ivantage and waste will be almost wholly eliminated. The volume logs required to sustain the above industries in full production considerably greater than is required by any existing or contemated projects in New Zealand.

The estimated total cost of all mills and plants, water schemes, ansport, offices, etc., as a going concern is unlikely to be greater an £6,250,000 and costs have already been written down by 00,000.

The estimated annual value of Sales is £6,500,000.

The estimated total number of employees is 2,500.

Future Manufacturing Expansion.

With regard to future manufacturing expansion, the Directors old the firm view that it is essential before any further expanon work of any size is undertaken by the company, that all anufacturing plants and general activities now operating and ing established should be thoroughly consolidated before any rther new projects are considered. In this respect we prefer to ake haste slowly and build up the company's resources as soundly possible. There is no foundation for the frequently expressed ew that Insignis forests rapidly mature and rapidly decay. Your irectors fully understand the necessity for utilising the forests peditiously, but only for the reason that it is timely to convert anding trees to much needed marketable goods and not for the ason that old age or disease makes forest utilisation imperative. e believe in fact that Insignis trees, which are the fastest growig exotic trees forested in New Zealand, will be quite healthy in other 50 years at least, if properly cared for, but their suitability r some pulping uses may then be somewhat more restricted than used 20 or 30 years earlier.

Summary of Operations.

From the foregoing summary of operations, it will be readily preciated that your Company has pioneered the use of exotic rest utilisation to a considerably greater extent than has been tempted or so far contemplated for any other area of forests. implement the original overall plans has required a period of n years, during which time a sum of £1 million pounds profit s been earned after tax assessments of approximately £1 million d after depreciating plant, etc., by £700,000. During the same riod enormous goodwill has also been created for the products ling produced. Long-term markets have been found for subantial quantities of pulp, paper and timber, etc., a considerable lume of research and investigation into timber, pulp and paper oblems peculiar to Insignis trees and of great value in manufacring has been successfully accomplished, so that your company s now passed its most difficult pioneering problems and can follw a well charted route through the consolidation period which s in the immediate future.

I trust the foregoing information will clearly provide all the formation which shareholders desire and fully satisfy them of e size, quality, value and scope of the company's activities.

We two are clubmates....

. . . have been for years. Last Saturday during our game the conversation turned to family matters . . . the provision for, and protection of, their interests in the future. Fred mentioned he was revising his will and intended appointing me his executor . . .

I told him I appreciated his trust because a suggestion like that—well . . .

that's more than friendship.....

but, as I pointed out to him, his trust *could* be misplaced by such an action. Not because of any fault of mine, but personal circumstances at the time, pressure of business or ill-health could prevent me giving full time to his trust. I suggested his family interests would be better served by appointing NATIONAL TRUSTEES to administer his estate . . .

National Trustees is an organisation of specialists experienced in all phases of efficient administration of family business and estate matters . . . an organisation equipped to carry out your trusts at all times in the manner you have planned and in the best interests of your beneficiaries. Free literature explaining the comprehensive service of National Trustees is readily available on request.

NATIONAL TRUSTEES

EXECUTORS AND AGENCY CO. OF AUSTRALASIA LTD.

95 Queen St., Melbourne, C.1. M 1781

Overseas Corporation (Australia) Limited

Reg. Office: 375 Collins St., Melb. **'Phone:** MU 9981. **Share Register:** C/o Flack & Flack, 128 William St., Melb. **Directors:** Sir John Storey, K.B. (Chairman and Manag. Director), G. A. Davis (Asst. Manag. Director), N. Myer, C. Wallace Smith, G. W. Pizzey, M. M. O'Loughlin. **Auditors:** Flack & Flack.

7th Year ended June 30, 1952. Meeting November 28, 1952.

Profit receded by £34,000 from last year's peak to £98,575. Because of the inability of customers to accept delivery and pay for imported lines, stocks rose by £419,000 and debtors by £173,000.

The company was not permitted to raise further capital, and as a result, the liquid position precluded the payment of an ordinary dividend. This situation improved after balance date.

The parent company is engaged in the importing and merchandising trade in Australia, as well as owning several manufacturing and servicing subsidiaries. Apart from the Melbourne headquarters, branches have been established in each of the mainland capital cities, also at Singapore, London and Osaka (Japan).

In his annual report, reprinted below, Sir John Storey (Chairman) gave an interesting survey of the company's ramifications.

"For the current year, the Board has budgeted for satisfactory profits from activities which are, in the main, already covered by firm orders and contracts," stated the Chairman, Sir John Storey, K.B., in his Annual Report to shareholders. His remarks read:

It was evident to your Board about the middle of last year that additional capital would be necessary to finance our progressively expanding operations, and arrangements were made for the underwriting of an issue of 250,000 ordinary shares. The rejection of our application without explanation by the Capital Issues Board left us with a serious shortage of working capital and with no alternative but to use current profits for urgent capital requirements. This contraction of our liquid resources, while conserving the strength of our capital structure, resulted in the temporary deprivation of a dividend to our ordinary shareholders.

The year's trading, despite some unfavourable factors, can be regarded as satisfactory, and adequate provisions were made for doubtful debts and adjustments to inventory values at current replacement costs.

In common with other major companies handling imports, we have, during the last nine months been faced with the problem of buyers being unable to accept delivery of and make payment for goods they had ordered. In some cases, where the buyers were undoubtedly sound, we provided extended credit terms; in others we decided to hold the stocks rather than grant long-term credit. The process of turning stock into debtors, and then into cash, is well under way, and the liquid position is steadily improving.

However, notwithstanding the group's profit position and the credit brought forward in the profit and loss appropriation account, your Directors do not consider the liquid position warrants the payment of a dividend to the ordinary shareholders, payment being confined to the relatively small preference issue holders.

The following is a brief review of our major activities:

Parent Company.

The parent company is progressively transferring its activities into self-contained operating divisions, subsidiary and associated companies; the main activities of which during the year under review were as follows:

Building and Contracting Operations.

Building Division.

The Building Division imported, assembled and erected, in all States, structures for schools, hospitals, telephone exchanges, Government buildings of a specialised defence type, and certain industrial buildings. These buildings, based upon Bristol aluminium components, have been an outstanding success and have met with a ready acceptance. Adequate orders are on hand to cover the current financial year and part of next year's operations. The Division employs 140 people.

Overseas Construction Co. Pty. Ltd.

This subsidiary is an efficient general contracting organisation, employing a skilled staff of some 420 people. The company is currently engaged on important reinforced concrete contracts at Morwell and the erection of homes in South Australia and Tasmania. Its operations are being expanded into the design and erection of factory buildings, in which we have had a wide experience.

Sainrapt & Brice (Australia) Pty. Ltd.

This company, in which we hold a fifty per cent. interest, has been formed in association with Etablissement Sainrapt et Brice, Paris, one of France's largest civil engineering and contracting companies. Sainrapt & Brice (Australia) Pty. Ltd. is currently handling important contracts at Wangaratta and Melbourne.

Engineering & Construction Group.

In order to achieve maximum co-ordination of effort, particularly in the most effective use of the experienced group of Australian, British, French and German engineers directing our building and construction contracts, we are now consolidating the above operations into one group, with the object of co-ordinating our civil engineering, construction and general building activities with the supply of capital plant and equipment.

The group's combined strength will then enable us to handle valuable and nationally important work with greater efficiency.

Merchandising Operations.

Diesel Engine Division—Overseas Plant & Equipment Pty. Ltd.

This division handled Deutz tractors and diesel engines of all types, manufactured by one of Europe's largest and most influential companies. The activities of this division have now been absorbed in a new company formed in association with Kloeckner-Humboldt-Deutz, of Cologne, Germany. Your company holds a fifty per cent. interest in this new enterprise, known as "Overseas Plant & Equipment Pty. Ltd." In addition to its present activities, the company will represent the Humboldt organisation in handling such capital equipment as cement plants, coal-handling equipment, conveyors, crushing and screening plants, etc.

Merchandising Group.

Concurrently with the reduction in overseas imports, we have been building up merchandising activities in Australian manufactured goods, as well as for the sale of selected types of imported goods for which we hold import quotas. This division controls our Singapore Branch, which was established experimentally a few years ago to develop Australia's exports. It is now a sound, well-managed business, and during the past year enjoyed a most profitable trading period. It is progressively broadening the range of Australian and overseas products handled, and is maintaining a satisfactory volume of business.

Manufacturing Subsidiaries.

National Art Metal Company Pty. Ltd. manufactures a wide range of duralumin furniture and enjoys a steadily growing trade in household, institutional and outdoor equipment. In addition, it holds large defence orders. This company now holds all the shares in another of your subsidiary companies, i.e., **Namco Products Pty. Ltd.**, manufacturers of Namco pressure cookers and other household equipment. Both companies, I am pleased to report, are operating profitably and progressively.

Bester's Sweets Pty. Ltd. have now moved to their new premises in Ballarat Road, Braybrook, where they have built one of the most modern confectionery units in Australia. Bester's trade is continuing to expand, and the company is operating satisfactorily.

Associated Companies.

Airflite (Training) Pty. Ltd.

During the year fifty per cent. of our interest in Airflite (Training) Pty. Ltd. was sold to the Bristol Aeroplane Company Ltd. of England. This association with the Bristol Aeroplane Company has long been envisaged by your Board as the most positive step to take advantage of the trend in the aviation field towards the utilisation of British aircraft and equipment. We are delighted to have the Bristol Aeroplane Company as our partners, and look forward to a profitable expansion in Airflite's activities. Airflite had a satisfactory year.

Aeronautical Supply Company Pty. Ltd.

Here, also, in this, our other company interested in the aviation field, we have sold a fifty per cent. interest to the Bristol Aeroplane Company. Aeronautical Supply Company is engaged primarily in the production and merchandising of aeroplane components and spares. Profit for the past year was up to budget, and the current year provides for an extension both in activities and budgeted profit.

Downyflake Food Corporation Pty. Ltd.

We are minority shareholders in this company in association with the Doughnut Corporation of America. The company enjoys a considerable volume of export business to Great Britain, and our American associates, the major shareholders in Downyflake, are confident of satisfactory development. No dividend was declared in the year under review.

General.

To sum up the position, your company, despite the unusual difficulties, earned reasonably good profits in the year under review. For the current year, your Board has budgeted for satisfactory profits from activities which are, in the main, already covered by firm orders and contracts.

Your Board's reluctance to recommend the payment of an ordinary dividend at this stage is based entirely on the recognition of the necessity to conserve the company's finances. Your Board fully appreciates its obligations to shareholders, and will review the position as finances become more liquid. The current rate of profit-earning is higher than that of the corresponding period of last year, and although the incidence of Government policy and finance could cause some slackening, we regard the outlook as definitely encouraging.

I pay a deep tribute to my fellow Directors and to the executives of the company during what has been, throughout Australia, a most difficult period.

New Zealand Loan & Mercantile Agency Co. Ltd.

Reg. Office: 37 Gracechurch St., London, E.C.3. **Melb. Share Register:** 538 Collins St. **'Phone:** MB 4101. **Other Share Register:** Wellington, N.Z. **Directors:** M. G. H. Brown (Chairman), Rt. "A flood of imports of textiles from England was the main cause of overstocking, but import restrictions are now controlling this factor," stated the Chairman, Mr. H. D. Giddy, in addressing shareholders at the Annual Meeting on December 17. Mr. Giddy's remarks read:

It is regretted that the result of the year's operations has been unfavourable and that a deficit of £3,662 is disclosed.

Stock Position.

The textile industry generally suffered a serious setback in the first half of the year, brought about chiefly by a heavily overstocked position in the warehouses and retail stores. A flood of imports of textiles from England was the main cause of this overstocking, but import restrictions are now controlling this factor. The position is adjusting itself, and there are definite indications now that a healthier outlook can be contemplated in the current financial year.

I do not want to suggest that our difficulties are completely over, but our capacity is gradually being absorbed, and we have confidence in being able to restore a satisfactory trading position.

The carbonising works have been fully employed during the year under review, and the company enjoys a high reputation for the class of work it turns out.

Directorate.

Unfortunately, Mr. F. G. Harding found it necessary to retire from the Board of Directors during the year, because of ill health. We miss his wise guidance on the Board very much indeed.

Staff.

The Directors pay their tribute to the loyal and efficient service given to the company by the staff in a year of many difficulties.

Zinc Investments Ltd.

Will ready cash be there to pay DEATH DUTIES?

WHEN a man dies, the first need of his dependents is cash with which to pay Death Duties.

Unless cash be available, some of the assets must be sold to raise the money, and hurried selling of property and other holdings often means selling at a loss. The better way is to arrange for payment with the proceeds of an A.M.P. Policy specially earmarked for that purpose.

Through the A.M.P. you can arrange that your dependents will have the cash with which to pay all such dues without any loss to the Estate.

Have you made such arrangements with the Society?

Ask the nearest A.M.P. office to give you details.

6th Year ended June 30, 1952. Meeting December 4, 1952.

Trading in the second half of the year was exceptionally difficult, owing to the sudden arrival of imported timber in the December quarter, causing dislocation in the timber trade. Profit was steady at £59,114 on augmented capital (up 55%). Because of the need to conserve resources for new plant, no dividend was paid.

Due to the inability of the Hydro-Electric Commission to provide power as soon as anticipated, the completion date for the Container Board Mill has been extended from September, 1952, to June, 1953.

Apart from this main project, the company has an extensive timber and merchandising business acquired from K. D. Atkins Ltd. in 1949 and since enlarged. This includes saw-milling, timber processing and motor-lorry platform assembly.

"The company has become associated with two of Australia's leading paper board converting companies, to manufacture and market cartons in Tasmania." stated the Chairman, Mr. Ivan N. Holyman, at the Annual Meeting on December 4. His address reads:

In February, 1952, the Board appointed Mr. J. W. McCrum, M.Agr.Sc., General Superintendent of the board mill.

When it became apparent that the company's requirements of electric power for this mill would not be available from the Hydro-Electric Commission of Tasmania until much later than had been expected, your directors gave anxious consideration to the possibility of installing the company's own generating plant, but decided against doing so in view of the expense involved and the delays which would attend the acquisition and installation even of an alternative generating plant.

The prospects of scheduled delivery of plant in other directions at any rate in the first half of the year was also uncertain and in all the circumstances your directors decided to adjust their schedule for completion with a view to conserving immediate capital outlay and to make completion coincide as nearly as is practicable with the availability of power. It now appears the electric power will become available in the latter half of 1953.

Nevertheless during the year good progress was made with the installation of the board-making machine under the supervision of the makers' representative. The boiler house was completed and two large boilers installed and are ready for use. The digester house is completed and ready for the installation of four digesters early in the New Year.

Costs of both labour and materials continued to rise, and the operation of the escalation clauses in contracts for deliveries caused earlier estimates to be exceeded, but I am pleased to report that there has of recent months been a marked improvement in this direction, although, unfortunately, the period of rising costs still subsists.

Timber Processing Plant.

In my address last year I referred to the purchase of a modern American high-speed planing machine. This machine has now been installed and its operation will improve the quantity and quality of the company's production of dressed timber. Abnormally wet weather in Tasmania during the last six months has retarded air-drying and consequently the kiln-drying and dressing of hardwood, and the full benefit of the new planing machine will not be felt until adequate quantities of kiln-dried timbers become available.

There is still a keen interstate and overseas demand for good quality Tasmanian hardwoods, both dressed and undressed, and every effort is being made to increase production of such timber.

Two additional double drying kilns have been almost completed and when in operation will provide a kiln-drying capacity of 78,000 super feet—the largest kiln-drying unit in Tasmania, and possibly in Australia.

The platform assembly plant operated on a reduced schedule during the latter half of the financial year due to the falling off of sales of motor trucks. Arrangements are in train for extending the market beyond present buyers for these platforms and increased business is expected from the beginning of 1953.

Sawmilling Division.

The company's mills operated normally during the year under review but in July last the directors decided in view of rising costs and large stocks to suspend production temporarily in order to review the position and to readjust production schedules. The mills now are being reopened progressively.

Housing.

During the year 20 dwellings have been erected on the company's freehold land adjoining the main property at Killafaddy, and these will be made available for sale to employees. A further 10 houses will be built during the current year to accommodate personnel for the board mill.

Afforestation.

As mentioned in my last address the company acquired several areas of pine plantations in various stages of growth within a comparatively short distance of Launceston. During the year these forests have been improved and maintained, and further areas have been planted. These softwoods will be used to augment the supplies of long fibre pulp for the board mill.

Carton Manufacturing.

I am pleased to announce that the company has completed rangements to become asscciated with two of Australia's lead- paper board converting companies, namely, J. Fielding & Co. d. and Paper Products Pty. Ltd., in a company to be called Tas- nian Containers Pty. Ltd., to manufacture and market cartons Tasmania. Tasmanian Containers Pty. Ltd. will commence to nction in January, 1953, using imported and Australian container ard until such time as the company's own board becomes avail- le.

In the opinion of your Directors this association will be most vantageous to the company.

Overseas Timbers.

In common with a number of other companies engaged in ding in overseas timbers, the company has built up a large ck of overseas timbers and timber products. This was due to reased deliveries of such timbers into Australia coupled with falling off in the demand by all timber using trades which were verely affected by the prevailing financial stringency brought out largely by Government regulations. The restrictions imposed such regulations have recently been lifted and the demand for se timbers is beginning to improve. However, your directors nsidered it prudent to make a provision against these stocks of),000 in a special price fluctuation reserve account.

Appropriations.

Your directors had hoped that they would be able to recommend lividend on ordinary shares similar to last year, but the additional finance necessary to maintain the expanded sawmilling, timber processing and platform assembly divisions, and the large stocks of local and overseas timbers has exceeded expectations. In addition to these factors, the capital expenditure on the board mill has increased due to improvements and to rising costs.

It is regretted therefore that in order to conserve the company's resources the Board cannot recommend the payment of an ordinary dividend this year.

Management.

In October, 1952, Mr. K. D. Atkins, who has been General Manager of the company since its inception, tendered his resignation from that position for health reasons. The Board thereupon appointed an Executive Committee consisting of Messrs. A. J. Rose, F.C.A. (Aust.) (Secretary and Finance Manager), J. W. McCrum, M.Agr.Sc. (General Superintendent Board Mill), and V. C. Canning, A.F.I.A. (Business and Administration Manager), which is now functioning.

I desire on behalf of the Board to express our appreciation of the services rendered to the company by our executives and employees.

Future Outlook.

Your directors visualise a period of conservation of the company's resources with the prime objective of bringing the container board mill into production in the latter half of 1953. To this end intensive efforts have been and are being made by your directors and the executive committee in regard to future planning of the company's operations. I am pleased to say that a re-check of estimates confirms your directors' opinion as to the earning capabilities of the company when in full operation.

"To combat increased costs your Directors have carefully nysed all aspects of the business and action has been taken rever possible to reduce costs and increase revenue," stated the hirman, Mr. F. P. Just, in addressing shareholders at the Annual eting on November 27. Mr. Just's remarks read:—

At the outset I would like to refer to the death of our late hrman, Mr. L. Bechervaise, who was Chairman of the company m its formation and guided it through the initial years of its rities. We deeply regret his passing and our deepest sympathy out to his wife and family. Your Directors gave long and iled consideration to filling the vacancy thus created and finally ded to invite Mr. F. P. Selleck, a well-known Melbourne Account- and business man and a Councillor of the Melbourne City Coun- l, to join the Board. We were very pleased when Mr. Selleck pted and his knowledge and experience have already proved of timable value.

Profit and Loss Account.

The net profit for the year is £398 which represents a substantial duction on the previous year. The gross profit brought forward from the Working Account is £32,485 compared with £45,295 in the previous year—a decrease of £12,810. This is attributed to higher costs generally without commensurate increases in passenger fares, freight and other charges.

Balance Sheet.

Shareholders' Funds at £194,070 show a decrease of £10,843, details of which are shown in the Profit & Loss Appropriation Account. The increase in Current Liabilities is more than offset by the increase in Current Assets.

Land and buildings are still shown at cost as your Directors have refrained from any revaluation. Their value has, however, been considerably enhanced since purchase.

Consolidated Profit & Loss Account and Balance Sheet.

These statements include the figures of Trans Otway Hotels Pty. Ltd. This company's net profit exceeded that of the previous year and a dividend of £1,400 was declared and received by Trans Otway Limited.

(Continued on next page)

TRANS-OTWAY LTD. (Contd.)—

Passenger and Freight Services.

This company has been no exception in its vulnerability to rising costs. It would be proper to state that this factor has hit the transport industry harder than any other industry. With fares and freights controlled by the Transport Board and the Prices Branch respectively it is not possible to meet cost increases immediately they occur.

A further aspect which has to be closely watched is that fares are not increased to an extent whereby people are deterred from travelling. It is necessary to so adjust fares that they will provide a reasonable margin of profit and not discourage travel. This condition requires very close attention. The substantial increase in the number of private cars on the road also tends towards a reduction in the numbers travelling on public transport, and the impact has been felt throughout the transport industry, both private and publicly owned.

Weather conditions last year were abnormal with a very wet winter and a mild summer. Road conditions were aggravated by the heavy rains and for many days the road was impassable resulting in the services having to be duplicated in many instances, thus creating an unavoidable increase in costs.

Lorne Freight Service.

Freight operations have presented another type of problem; here again to increase freight rates to meet the upward spiral, an incentive is provided for people who require their goods to be transported, to purchase their own trucks. This condition has been evident, particularly in Lorne, and under the Transport Regulation Acts, such people can obtain a licence automatically at a nominal cost which will allow them to carry their own goods anywhere within a radius of fifty miles from their place of business. Having regard to this fact and the loss incurred in operating the Lorne freight service, your Directors considered it was advisable to dispose of it and this has been accomplished at a figure which is regarded as most satisfactory.

Actions to Combat Increased Expenses.

Cost of living adjustments on salaries and wages for the year ended June last amounted to 35/- per week and this factor alone added £6,500 to the overall cost of operation.

To combat increased costs your Directors have carefully analysed all aspects of the business and action has been taken wherever possible to reduce costs and increase revenue. An indication of what has taken place is:—

Permission has been granted by the Transport Regulation Board to increase fares by 15% from Melbourne only.

Mail contracts which expired on June 30 last have been renew at an increased figure.

School contract services have also been increased to the ext of cost increases, and quarterly adjustments are made automatic under an arrangement with the Education Department.

Newspaper contracts have been increased.

Operating schedules have been revised to reduce services wh have not been patronised sufficiently to warrant their continuanc

Efforts are being made to increase traffic through avenues various kinds, viz., local tours at Lorne and Apollo Bay—char work from both Melbourne and Geelong and parcels carriage.

Warrnambool service—additional rights have been obtained this route since the train service has been amended to stop at m towns only. Wayside traffic is now catered for by our service.

An additional Sunday Timetable between Melbourne and Wa nambool has been introduced and is proving very popular.

Cost reduction—through the sale of the Lorne business and vised policies, total staff has been reduced from 71 at June 30, 19 to 58 at present. It is proposed to continue at this level throu out the year and thereby effect a considerable saving in salaries a wages which constitute more than one-third of our total costs.

Various other items of cost have been carefully pruned and result, we confidently feel, will be reflected in a much-impro position being presented at the end of the year.

San Toy Cafe and Guest House.

You were advised in our Chairman's address last year that Directors had decided to dispose of the business. All efforts to so, however, were fruitless, and because of the interest of one pr pective purchaser the business was kept operating for a much lon period than would have been prudent. Changes in manageme three in number, during the year, aggravated the position and was finally closed in May, but not before a substantial loss h occurred. The business has now been leased, however, thus moving the possibility of any further losses.

General.

Having regard to the very difficult economic conditions wh have existed, and whilst your Directors would have been m pleased to advise a more substantial profit, the general result of year's activities gives confidence in the future and this confidence already being reflected in the figures for the first four months of year.

In conclusion, I wish to thank all members of the staff for th co-operation and assistance and I trust that next year I shall h the pleasure of presenting to you a report which will reflect confidence I feel today in the future.

"Output from the three operating units was substantially higher, but greater costs of labour and materials more than offset the increase in profit that might normally have been expected," said the Chairman, Mr. P. B. Webb, in his Annual Address to shareholders. Mr. Webb's remarks read:

It will be noticed from the Consolidated Statement of Accounts that the new capital subscribed during the year has been used primarily in increasing our freehold and fixed assets.

We own the freehold of a valuable site in Adelaide on portion of which we have erected new premises during the year for our South Australian subsidiary. We have now a first-class factory, capable of meeting all expansion requirements in the foreseeable future.

We have added to our plant and equipment during the year, and are progressively becoming independent of outside contractors. We will continue to follow this policy as the opportunity offers and the occasion demands.

The improved current asset position reflects the growing strength of the business. Other assets include a number of items which might be considered intangible were it not that they represent some very valuable world-wide patents which, we hope, will ultimately result in the return either by way of royalties or the sale of manufacturing rights overseas. In this regard our Technical Director is returning from abroad after arranging for the manufacture and distribution of our products in the United Kingdom and the Continent. We look foward to some very valuable associations as a result of his visit, and feel that these will

assist us greatly in the continued development of our activities in the fields closely related to the generation and the use of steam. This development is designed to strengthen our production activities and broaden our sphere of operation.

Steam Generators.

It is now some six years since the first "Presha" generator was put into commercial use, and it is gratifying to know that, although there have been natural developments and design changes since then, this original unit is still operating as efficiently as when first installed. From this small beginning we have reached the stage where there are many hundreds of units in operation in Australia, New Zealand, the Pacific Islands, Malaya and New Guinea.

Our market research and knowledge of the increasing requirements of steam users in the Commonwealth alone make us confident that there will be a continual and steady demand for "Presha" steam generators.

Apart from supplying new industries, we are finding an increasing number of old-style and obsolete installations are being replaced with the modern and efficient services supplied by "Presha" steam generators. The resources of our Research and Technical Department are freely available to our clients.

Earlier I mentioned the building of new premises in South Australia, and it is pleasing to advise also that our Victorian factory, which we lease, was enlarged four-fold towards the end of the year, and now we occupy the whole of the building.

Output.

The output from our three operating units was substantially higher than it was for the previous year, but, unfortunately, the greater costs of labour and materials more than offset the increase in profit that might normally have been expected, and it is hoped that the economies and manufacturing improvements now effected will overtake the position. Nevertheless, it is pleasing to be able to recommend the payment of a dividend at the same rate as last year, although the bonus paid then is not repeated as the Directors desire to conserve funds for further expansion and development in consequence of the additional factory area available.

Staff.

I would like to express my appreciation of the assistance given me by other members of the Board, and the loyal services of the staff and all employees.

Robert Hutchinson Ltd.

The following report by the Chairman, Mr. R. Hutchinson, was circulated to shareholders with the Annual Accounts:

We are pleased to report that the year's operating profit was £53,400 after providing £12,603 for depreciation and amortisation of assets. Distribution of bonuses totalling £18 680 has been provided for on the recommendation of your Directors, which, together with payroll tax on the June bonuses, amounting to £395, leaves a net profit of £34,325 for the year ended June 30, 1952.

This amount when added to the figure brought forward from the preceding year of £63,253, makes the balance in the appropriation account £97,578. From this figure, preference and preferred ordinary dividends and income taxes paid take £9,374, leaving a balance of £88,204 to be carried forward as against £63,253 at the close of the previous year.

As from next year it will be the policy of the company to make provision in its accounts for any estimated tax liability.

No such provision has been made this year because of the uncertainty as to whether or not a substantial part of the special depreciation to be claimed by the company will be allowed as a deduction. This matter is at present being taken up with the taxation authorities.

The results of the year's operations as disclosed in the profit and loss statement have not been materially affected by any items of an abnormal nature.

New Capital.

In December, 1951, the company issued 100,000 6% cumulative preferred ordinary shares of £1 each to enable it to proceed with its expansion programme. Numerous applications were forced to be allotted on a reduced scale as the issue was oversubscribed.

Both the abovementioned preferred ordinary shares and the preference shares of this company are now listed on The Stock Exchange of Melbourne.

It is of interest to note that the results for the year ended June 30, 1952, were achieved without any benefit from the earning capacity of this new capital.

New Construction.

One of the objects of the abovementioned share issue was to provide money for the duplicating of the grain silos and to install between the two banks of silos an efficient and high capacity wheat cleaning department.

It is pleasing to report that the year under review has seen the construction of both the new bank of silos and the wheat cleaning house, and your directors are confident that they will greatly assist in obtaining the maximum results from the company's flour mills.

The company has also installed its own railway weighbridge at the Glenroy railway siding to facilitate the handling of the bulk wheat, and during the coming financial year plans to complete a rail turntable and rail siding (already in an advanced stage of construction) to enable the bulk wheat trucks to be unloaded direct into the hopper at the base of its silos.

Trading Activities.

The Provendor mill (trading as Hutmill Stock and Poultry Food Co.) was able to augment its income for the year from the sale of stock and poultry feed (in the form of pellets) manufactured by the new Californian press installed during the year ended June 30, 1951.

The grain and produce department continues to handle a large proportion of the Victorian and Southern Riverina oat export trade with excellent results.

The retail produce section (trading as John McLean & Son) again achieved a record turnover and profit for the year under review, emphasing the efficiency of this department.

The two country branches in the Riverina greatly assisted the grain operation of the company during the year ended June 30, 1952, and operated to profitable advantage.

Your directors are proud of the co-ordinated efforts of the company's employees, which have made the above results possible.

Reports on Mining Companies

A.1 CONSOLIDATED GOLD N.L.—

	28 weeks	2 weeks		
	17/3/53.	17/3/53.	3/3/53.	17/2/53.
Tonnage crushed	4,770	500	490	570
Gold, ozs.	3,653	450*	536	326

*Including 110 ozs. from plant clean-up.

ABERFOYLE TIN N.L.—**11/3/53:** Following recent falls in wolfram price, the company announces that contract prices with British Ministry of Supply for wolfram concentrates and residues are now higher than the overseas open market price. Contract expires November, 1955.

	Feb. 1953.	Jan. 1953.	Dec. 1952.	Nov. 1952.	Feb. 1952.
Dry tons milled	50,430	50,730	50,225	54,220	51,165
Bullion produced	2,900	3,225	3,070	3,090	3,125
Zinc concentrates produced	2,986	3,424	3,496	3,906	3,531

NEW BROKEN HILL CONSOLIDATED LTD.—

Ten weeks ended March 14, 1953.

Ore Treated—30,759 tons—assaying: 8.0% lead; 1.9 ozs. silver; 13.5% zinc.

Lead Concentrate Produced—3,043 tons—containing: 2,227 tons recoverable lead; 48,126 ozs. silver.

Zinc Concentrates Produced—7,617 tons—assaying: 51.6% (3,930 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/1/53 to 14/3/53), compared with the same period last year—

	Lead Concentrate. Lead.	Lead Concentrate. Silver.	Zinc Concentrate. Zinc.
1953 (10 weeks)	4,893 tons	100,878 ozs.	7,510 tons
1952 (10 weeks)	2,831 tons	62,918 ozs.	4,300 tons

NORTH BROKEN HILL LTD.—

Four weeks ended March 7, 1953.

Crude Ore Treated—28,293 tons—assaying: 14.0% lead; 7.6 ozs. silver; 11.3% zinc.

Lead Concentrate Produced—5,411 tons—assaying: 71.1% (3,848 tons) lead; 36.3 ozs. (196,606 ozs.) silver; 5.3% zinc.

Zinc Concentrates Produced—5,394 tons—assaying: 0.7% lead; 1.6 ozs. silver; 51.1% (2,755 tons) zinc.

Lead and silver contents in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/7/52 to 7/3/53), compared with the same period last year—

	Lead Concentrate. Lead.	Lead Concentrate. Silver.	Zinc Concentrate. Zinc.
1952/53 (35 weeks)	30,836 tons	1,516,265 ozs.	22,153 tons
1951/52 (36 weeks)	28,773 tons	1,386,674 ozs.	20,691 tons

THE ZINC CORPORATION LTD.—

Ten weeks ended March 14, 1953.

Ore Treated—43,161 tons—assaying: 15.7% lead; 3.4 ozs. silver; 11.8% zinc.

Lead Concentrates Produced—8,573 tons—containing: 6,350 tons recoverable lead; 138,012 ozs. silver.

Zinc Concentrates Produced—8,935 tons zinc—assaying: 52.3% (4,673 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/1/52 to 14/3/53), compared with the same period last year—

	Lead Concentrate. Lead.	Lead Concentrate. Silver.	Zinc Concentrate. Zinc.
1953 (10 weeks)	12,856 tons	287,401 ozs.	9,617 tons

Commonwealth £77,000,000 Cash and Conversion Loan

The Commonwealth Treasurer, Sir Arthur Fadden, has anced that the 17th Security Loan of £77 million, which d on April 17, was over subscribed by £2.1 million.

Cash subscriptions amounted to approximately £43.1 millions conversions to approximately £36 millions, a grand total of millions.

n issuing this loan the Commonwealth Government sought conversion of £47 million of 2% securities maturing 17th l and £30 million cash for works purposes, a total of £77 ons in all. Thus about 75% of the maturing securities converted and cash subscriptions were sufficient both to em the balance of unconverted securities and to provide t £32 millions for works and other purposes.

Sir Arthur Fadden said that he regarded the results as fully satisfactory. In particular the amount of cash subscriptions obtained was evidence of increasing support for Commonwealth Loans at current rates and conditions. The conversion operation could also be regarded as a success. The percentage of the maturing securities converted compared well with previous experience.

Sir Arthur added that he wished to convey his thanks to all who had worked for the success of the loan, including financial institutions and stockbrokers who had received applications and the members of voluntary loan committees whose work had been so very successful.

Company Reports

THE BALLARAT BREWING COMPANY LTD.—Negotiacompleted for purchase of all the 64,543 fully paid ordishares of Volum Brewing Co. Ltd., Geelong. Price was 0/6 per share payable £3/0/6 in cash and £3/10/0 by issue nsecured notes at 4½% redeemable on or before 1st July,

Company Half-yearly Reports

. G. HEALING LTD.—31/12/52: Following import resions, sales were reduced but recovered during second ter. Expenses have increased, and Directors do not antie that full year's results will equal those of past few years, dividend rate is expected to be maintained.

ARCHER & LAING HOLDINGS LTD.—28/2/53: Due to rtainty of overseas markets recently, policy has been to re- liabilities, commitments and stocks. Liquidity greatly imed and unfashionable textiles and surplus stocks eliminated.

HE BALLARAT WOOLLEN & WORSTED CO. LTD.— /53: After several months of difficult trading conditions, nd increased towards the end of 1952 and mill fully emd for practically the whole of the six months to 31/3/53; rading results satisfactory.

BENDIX CONSOLIDATED INDUSTRIES LTD.—31/12/52: Sales and profits lower than for corresponding period last year, but substantial orders held; new plant factory ready for occupation in April. Dividend payment deferred until full year's operations concluded.

CARPET MANUFACTURERS LTD.—31/12/52: Trading has improved and accumulated stocks show a gratifying decline; additional plant being installed progressively.

CHANDLERS (AUSTRALIA) LTD.—31/12/52: Group turnover considerably lower than corresponding period in previous year but recovered gradually from drop in early part of calendar year; liquidity improved and expenses curtailed. Although there are some signs of improvement in economic conditions

(Continued on next page)

COMPANY HALF-YEARLY REPORTS (Contd.)—
generally it appears that recovery of electrical industry will be gradual.

COLLIER-GARLAND LIMITED.—31/12/52: Trading unsatisfactory and no interim dividend declared. Directors consider conditions are beginning to improve and hope to restore normal operations soon.

COLLIER'S INTERSTATE TRANSPORT SERVICE LTD.—31/12/52: Owing to unsatisfactory trading due to government restriction, high road taxes and the general recession throughout Australia, no interim dividend declared.

COMPRESSED CORK SHEET CO. LTD.—31/3/53: Turnover commenced at a comparatively low point, but improved noticeably during second quarter and is expected to increase further; production cost has slightly eased, and total year's trading expected to be satisfactory.

CONSOLIDATED METAL PRODUCTS LTD.—31/12/52: Profits, although not equal to the corresponding six months of 1951, were well in advance of six months to June, 1952 and improved after January 1953.

CROOKS NATIONAL (HOLDINGS) LTD.—31/12/52: Sales higher than corresponding period last year and results satisfactory despite more difficult trading.

DAVID JONES LTD.—28/2/53: Trading for seven months was satisfactory due to rigorous control of expenses and writing down of stock in previous year. Turnover now increasing and a further satisfactory five months' trading expected.

DRUG HOUSES OF AUSTRALIA LTD.—31/12/52: Trading results do not warrant payment of an interim dividend.

DUNCAN'S HOLDINGS LTD.—31/12/52: Consolidated profits prior to tax and subject to audit £68,637 compared with £71,113 for previous six months. Sales maintained at level which compares favourably with the previous period.

THE FEDERAL BUILDING SOCIETY—31/3/53: Funds fully employed and business normal.

FOY & GIBSON LIMITED.—31/1/53: Trading results not satisfactory, retail trading particularly difficult especially during first four months, but improved considerably in last two months. Due to high expense rate net profit of retail stores for period substantially reduced.

Owing to general reduction in demand for textiles, production of Eagley Mills had to be reduced in early months and a loss incurred. Demand revived during the end of the period and orders in hand ensure full production for remainder of financial year.

FOY & GIBSON (W.A.) LTD.—31/1/53: Sales declined slightly compared with same period of previous year, but consolidated profit increased.

GADSDEN-HUGHES LTD.—31/12/52: In common with other similar organisations, turnover was reduced substantially, but was largely compensated for by the saving in expenses following amalgamation of the two operating companies.

GILBERT LODGE (HOLDINGS) LTD.—31/12/52: Trading operations satisfactory.

GROCERY & GENERAL MERCHANTS LTD.—31/12/52: Consolidated loss sustained and no interim dividend paid and there is no likelihood of a final dividend this year. Activities have been reorganised and capital losses on closing down and realisation have been minimised. Manufacturing operations adversely affected by difficulties in fruit and vegetable canning industry. Manufacturing of cut fur at Furex Pty. Ltd. has ceased, and the factory closed down. Overall financial position has improved and advantage taken of maximum discounts allowable. Overdraft will be reduced from proceeds of sale of certain freehold properties.

Head office changed to 95 Forbes Street, East Sydney.

HENDERSON'S INDUSTRIES LTD.—31/12/52: Net profits affected by a general rise in costs and lower turnover. Liquidity position maintained and satisfactory profit anticipated for year.

HENRY BERRY & CO., (AUSTRALASIA) LTD.—31/12/52: Profits declined as compared with corresponding period last year, due to slight recession in turnover, reduced gross profit margins and increased expenses.

JOHN SACKVILLE & SONS LTD.—31/12/52: Whilst demand has not diminished, turnover was lower than corresponding previous half year due to shortage of raw materials. Profit has been maintained by greater production efficiency and pruning of expenses.

KELLY & LEWIS LTD.—31/12/52: Under the Colomb plan the company has received the largest single order in it history, which, in conjunction with other current orders, ensure full production for the next 18 months. Subsidiary companie generally continue to operate satisfactorily. Liquidity ha improved.

THE LANGRIDGE MUTUAL PERMANENT BUILDIN SOCIETY.—31/12/52: Demand for finance continues to b steady and borrowers are meeting their repayments satis factorily.

LORDS HOLDINGS LIMITED.—31/12/52: Turnover i creased by 8% over corresponding period last year; subsequen trading satisfactory.

MOLDEX LIMITED.—31/12/52: Interim preference dividen deferred.

MORAN & CATO LTD.—31/1/53: Results satisfactor sales well maintained, but trading conditions more difficult an show no indication of any change.

PRESHA INVESTMENTS LTD.—31/12/52: Difficult tradin conditions affecting sales of capital equipment continued unt well into the second quarter, since when there has bee a steady recovery towards a satisfactory level.

READY MIXED CONCRETE LTD.—28/2/53: Net prof for 8 months satisfactory. Despite major economic adjust ments last year and their effect on construction activities th Company has been able to operate profitably and no loss o account of stock revaluations has been incurred. Continuanc of satisfactory profits is anticipated.

Brisbane River gravel and sand plant is expected to com mence production in July next.

RING GRIP LTD.—31/12/52: Turnover lower, but prof satisfactory although lower than for corresponding period las year. Improvement expected in remainder of financial year.

R. J. McNIVEN INDUSTRIES LTD.—31/12/52: Sales 8 lower than for corresponding period last year, but profit £1,36 higher. Financial position improving and company expects t be paying dividends after June.

ROCKE TOMPSITT & CO. LTD.—31/12/52: Turnover de creased slightly; expenses heavier and net profit lower; n ordinary dividend paid.

TASMANIAN BOARD MILLS LTD.—31/12/52: Small ove all loss incurred. Timber producion adversely affected b weather conditions and recession in building industry, but ha improved since December.

Construction of Container Board Mill at Killafaddy pro ceeding satisfactorily and production expected in July subje to availability of Hydro Electric Power.

TESSELATED TILE HOLDINGS LTD.—31/12/52: Sale increased steadily and demand remained constant. Productio in some lines has been maintained and others substantially in creased.

THOMPSONS (CASTLEMAINE) LTD.—31/12/52: Opera tions satisfactory. Profit well maintained and works continu to be fully occupied.

TOLEDO-BERKEL (AUSTRALIA) LTD.—31/3/5 Although lower than last year's record, sales well maintaine and trading results satisfactory.

VESTA BATTERY CO. LTD.—31/12/52: Notwithstandin general recession in motor trade, business well maintained an total sales showed an increase of 18% over corresponding perio last year.

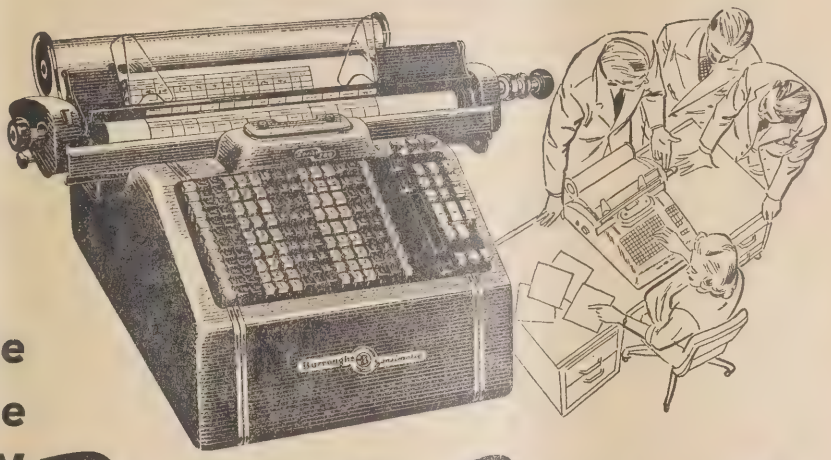
Turnover and profit of subsidiary Vesta Products Pty. Lt increasing; a complete range of automotive cables has bee developed and next month ignition coils and condensers wi be announced.

W. BRASH MACARTHUR LTD.—21/12/52: Full effects o import restrictions now being felt and shortages evident i many lines. No interim dividend declared. Directors expe steady improvement in trading results during 1953.

WEBB INDUSTRIES LTD.—31/12/52: Abnormally we spring and early summer affected sales of water supply equi ment; trading was not as satisfactory as during previous yea Due to reduced rural spending power and deferment of nation works programmes, activity has been reduced. No interi dividend paid.

WITTNER'S HOLDINGS LTD.—31/1/53: Sales satisfactor although a little less than same period last year. Present con ditions indicate improvement, and prospects for the year con sidered reasonably satisfactory.

Here's a sensational New Burroughs to help business get more things done!



The incomparable NEW **Burroughs Sensimatic**

ACCOUNTING MACHINE

Here's the source of Sensimatic magic!

This is the Sensimatic's mechanical brain — the control panel that directs it through any four separate accounting operations in any combination. The operator turns a knob —the Sensimatic is ready for any job! Any number of control panels can be used in a single machine.

Does more jobs faster, easier, cheaper than any accounting machine—*at any price!*

Never before have complete, on-time facts and figures, records and reports, been so vital to business operations. And never before has there been an accounting machine like the sensational new Sensimatic to help every business get more things done.

The amazing Sensimatic is ready for any accounting job at the twist of a knob. That's because the Sensimatic is the machine with the "mechanical brain"—the sense plate that directs it through every accounting operation.

Sensimatic can get more things done for your business. Be among the first to profit from the first Sensimatic deliveries. Call the Burroughs man for details now.

WHEREVER THERE'S BUSINESS THERE'S **Burroughs**

Burroughs Limited, Head Office, 76 William St., Sydney

OBJECT OF THE ISSUE:

The proceeds of the issue will be used mainly to provide additional working capital for the business of the wholly owned subsidiary Companies, S. Haunstrup & Co. Proprietary Limited and S. Haunstrup & Co. (South Australia) Proprietary Limited, which will continue as the operating Companies.

REPORT BY THE MANAGING DIRECTOR

The following report by the Managing Director, Mr. S. Haunstrup, dated April 2 was published in the prospectus:—

In 1923, I visited Australia on behalf of a Danish construction company, with a view to extending its activities to Australia. The company decided against the extension but I commenced constru tion work in Australia myself and in 1926 the present Company, Haunstrup & Co. Proprietary Limited, was formed to expand engineering activities.

While with the Danish company I had extensive experience the design and construction of cement works on the Continent s the first major contract carried out by the present Company the design and construction of extensions at the Australian Cem Co., Geelong. An extensive contract in the Company's early ye was the Killara Reservoir, the largest roofed reservoir in Southern Hemisphere. This contract carried on into the early pression years, after which the development of the steel indus at Port Kembla enabled the Company to secure several contra with Australian Iron & Steel Ltd. and Commonwealth Rolling Mi The design and construction of cement work for Goliath Portla Cement Co., Tasmania, and Golden Bay Cement Co., New Zeala were also carried out during the 1929-31 period.

Immediately before the recent war, the Company secured c tracts for construction works in connection with Australian Pa Manufacturers' new mill at Maryvale, Victoria, and extensions the mines operated by The Zinc Corporation Ltd. and North Brok Hill Ltd., at Broken Hill, N.S.W.

During the war the Company was entrusted with various wo under Government sponsorship, the construction of a new ore tre ment plant for King Island Scheelite and the design and constr tion of bulk wheat storages in Western Australia and Victo fuel oil tanks, etc.

Today the Company is engaged in the following major works

Victoria:
- Gas & Fuel Corporation of Victoria—Various works at W Melbourne and Highett.
- Carlton & United Breweries Ltd., Melbourne—Malt silos.
- Smith Mitchell Ltd., Melbourne—Barley silos.
- Australian Cement Ltd., Fyansford, Geelong—Crusher statio

Tasmania:
- Australian Aluminium Production Commission, Bell Bay, Ta New aluminium plant.
- Associated Pulp & Paper Mills Ltd., Burnie—Extensions construction of new mill.
- Thos. Owen & Co. (Aust.) Ltd., Burnie—New paper mill.
- Australian Titan Products Pty. Ltd., Burnie—Extension of pa pigment mill.
- Marine Board of Launceston, Launceston—Wharf for alumini plant, Bell Bay.
- Dept. of Public Works, Burnie—Railway overpass bridge.
- Dept. of Public Works, Launceston—Pumping station.
- Marine Board of Burnie, Burnie—Bulk Warehouse.

New South Wales:
- The Zinc Corporation Ltd., Broken Hill—Various mine surf structures.
- New Broken Hill Consolidated Ltd., Broken Hill—Surface str tures in connection with new mine shaft.
- North Broken Hill Ltd., Broken Hill—Surface structures connection with new mine shaft.

Queensland:
- Australian Wheat Board, Pinkenba—Bulk wheat storage.
- A.C.F. & Shirleys Ltd., Pinkenba—Extensions to super she

Much of the work of the operating Company is carried out designs prepared by the Company. This combination of design construction is unique in Australia and experience has shown t it is of mutual advantage through ensuring maximum co-operat between our clients and our own design and construction staff

Profits from contracts in hand as at 31st December, 1952, wo under normal conditions, be expected to provide a net result, a taxation, of at least £50,000. These contracts are being fully p ceeded with. With these and subsequent contracts received, Company's present staff will be fully engaged for some considera time. In addition, preliminary designs and estimates have b furnished by our design department for other important project

Present plant and machinery are up-to-date, in first-class or and sufficient to meet present requirements and allow for exp sion.

Included in the Company's staff are officers of business technical ability who have had extensive experience in the ministration of their respective departments.

ıe Report of the Investigating Accountants indicates that the ngible asset support for each £1 share, after the present issue 000 shares, will be £1/3/-, based on book values of assets as t December, 1952. These book values, however, are below t-day values, on which basis the asset backing shown for hare, £1/3/-, would be increased.

have every confidence in the continued success of the operat- ompanies and the Directors of the holding Company expect n the absence of any material change in economic conditions, will be able to recommend annual dividends on its ordinary at a rate of not less than 9 per cent. per annum.

REPORT OF INVESTIGATING ACCOUNTANTS: (Messrs. SPRY, CLARK, TOOTELL & CO.)

u have informed us that Haunstrup Constructions Limited es to issue to the public at par for cash 50,000 Ordinary of £1 each. We understand that the Company intends to t such issue, when fully paid, to Ordinary Stock Units of h.

e have, in accordance with your instructions, examined the ts of Haunstrup Constructions Limited, and its wholly owned iaries:—

Haunstrup & Co. Proprietary Limited
Haunstrup & Company (South Australia) Proprietary mited.

his report has been prepared by us for inclusion in the ctus of the proposed issue referred to above.

unstrup Constructions Limited was incorporated on 19th May, with an Authorised Capital of £500,000.

incorporation, Haunstrup Constructions Limited acquired all issued share capital of S. Haunstrup & Co. Proprietary d which in turn is the holder of all the issued share capital Haunstrup & Company (South Australia) Proprietary Limited. sued capital of Haunstrup Constructions Limited is £120,000.

have examined the audited accounts of the holding company, rup Constructions Limited, for the period 19th May (date of ration) to 31st December, 1952, and those of the operating ies, S. Haunstrup & Co. Proprietary Limited and S. Haun- & Company (South Australia) Proprietary Limited, for the 5½ nded 31st December, 1952.

TS OF PAST PERIODS:

set out hereunder a statement of the consolidated net profits group of companies for the five years ended 30th June, 1952, e half year ended 31st December, 1952, the latest date to which ts have been made up.

ese profits include the results of the Haunstrup Constructions d for the period from date of incorporation (19th May, 1952). ofits shown are based on the audited accounts after making djustments as, in our opinion, are appropriate. No allowance en made for any additional profit which may be earned through roduction of the proposed new capital. We understand that sent, each company in the group is a Private Company for n purposes. We are informed that the membership of the company after the proposed new issue will be such that mpanies will be liable to tax as Public Companies and the ons for Taxation have therefore been calculated at rates now ble to such Companies.

	Years ended 30th June,					Half-year to 31st Dec.,
	1948	1949	1950	1951	1952	1952
Audited Net Profits before ing for Income Taxes ..	£7,776	£21,824	£24,430	£52,704	£55,495	£38,564

TS AND DIVIDENDS OF HAUNSTRUP CONSTRUCTIONS MITED:

e audited accounts show that Haunstrup Constructions Limited no profit or loss for the period 19th May, 1952 (date of incor- n), to 30th June, 1952, and that the Company made a profit 75 for the six months ended 31st December, 1952. This amount rived from dividends declared by S. Haunstrup & Co. Pro- y Limited out of the profits of the year ended 30th June, 1952. dividend has been declared by Haunstrup Constructions l since the date of its incorporation.

CIAL POSITION:

have prepared a Consolidated Statement of the Assets and ies of the group of Companies as at 31st December, 1952, on the audited accounts previously referred to and assuming

The proceeds of the proposed New Issue of £50,000 had been received and applied as follows:—

(i) In increasing Working Capital	£47,500
(ii) In payment of the costs of the Issue	2,500
	£50,000

The group of companies are classified as Public Companies for Taxation purposes before 30th June, 1953, thus eliminating any contingency for tax as Private Companies on Undistributed Profits.

(c) No dividend is paid by Haunstrup Constructions Limited out of profits earned by the group to 31st December, 1952.

This Consolidated Statement is set out hereunder:—

ASSETS.

Current Assets:		
Cash in Hand and in Transit		£676
Cash at Bankers	£64,536	
Add Net Proceeds of New Issue	47,500	
		112,036
Sundry Debtors		126,509
Payments in Advance		3,381
Deposits		1,981
Stock on Hand and Goods in Transit—At lower of cost or market value		13,425
Total Current Assets		£258,008
Fixed Assets:		
Freehold Land and Buildings—at cost		19,046
Yard Buildings—At cost less depreciation ..		586
Plant and Machinery—At cost less depreciation		40,237
Furniture and Fittings—At cost less depreciation		4,190
Motor Vehicles—At cost less depreciation ..		11,212
Total Fixed Assets		75,271
Intangible Assets:		
Estimated Costs of New Issue		2,500
Preliminary Expenses and Cost of Previous Issues—At cost		1,853
Consideration for Restrictive Service Agreement—At cost		5,000
Total Intangible Assets		9,353
Total Assets		£342,632

LIABILITIES AND SHAREHOLDERS' FUNDS.

Current Liabilities:		
Sundry Trade Creditors		£59,343
Sundry Other Creditors		39,081
Provision for Taxation		35,053
Progress Claims on Contracts	£214,545	
Less Work in Progress—At lower of cost or valuation	210,218	
		4,327
Total Current Liabilities		£137,804
Shareholders' Funds:		
Authorised Capital		500,000
Issued and Paid Up Capital—		
170,000 Ordinary Stock Units of £1 each		170,000
Difference between Cost and Tangible Asset Value of Shares in Subsidiary Company at Date of Acquisition		9,304
Profit and Loss Appropriation Account		25,524
Total Shareholders' Funds		204,828
Total Liabilities and Shareholders' Funds		£342,632

VERIFICATION OF ASSETS AND LIABILITIES:

Current Assets, £258,008. The items in this group have been checked by us in the usual manner and, in our opinion, the values are shown on a satisfactory basis.

Fixed Assets, £75,271. Independent valuations have not been obtained in respect of the various items of Fixed Assets.

Freehold Land and Buildings are shown at cost.

Plant and Machinery, Furniture and Fittings, Motor Vehicles and Yard Buildings are also shown at cost from which, in our opinion, adequate allowance has been made for depreciation.

Current Liabilities, £137,804. To the best of our belief all liabilities of the companies have been adequately provided for in the figures shown herein.

The Provision for Taxation appears adequate to cover the liability for Ordinary Income Tax to 31st December, 1952, on profits of the group. A contingent liability exists for Undistributed Income Tax which will be eliminated if, as anticipated, the Share Issue now contemplated enables the group to acquire Public Company status for taxation purposes before June 30, 1953.

NET TANGIBLE ASSET COVER:

The Net Tangible Asset Cover for each £1 Ordinary Stock Unit, after the introduction of the proposed New Capital and based on the figures set out above, is as follows:—

Current Assets		£258,008
Fixed Assets		75,271
		£333,279
Less Current Liabilities		137,804
Net Tangible Assets supporting Ordinary Capital of £170,000		£195,475

Cover for each £1 Ordinary Stock Unit is therefore £1/3/-.

(Continued on next page)

REPORT OF MR. K. G. LUKE, CHAIRMAN OF DIRECTO

The following report by the Chairman of Directors was lished in the prospectus:—

The business, founded in July, 1925, commenced in a s building in Carlton, with five employees. A move to larger mises was made in 1926, and two years later a further move made to the present address, 30 Queen's Parade, North Fit where up-to-date offices and showrooms are now located. Mo showrooms are also situated at 391 Little Collins Street, Melbo and 91A York Street, Sydney. The proprietary company wa corporated in 1930. Adjacent properties were acquired, and t the factory area at North Fitzroy totals approximately 50,00 feet with 12,000 sq. feet still available for further expansio foundry was also built at the rear of the property for produ of Brass, Bronze and Nickel Silver Castings.

A modern factory of 30,000 sq. feet, purchased in 194 occupied at Brunswick by the Hospital Equipment and Sheet M Division, and the Stainless Steel Section is housed in a free of 12,000 sq. feet at Preston.

Thirty acres of land are owned at Mitcham, Victoria, wh modern factory of 10,000 sq. feet has already been erected f Subsidiary Company, Luke & Singer Pty. Ltd., and this ye further building of 13,000 sq. feet is to be erected for an Subsidiary Company, Concentric Engineering Pty. Ltd. Ultima it is proposed to transfer all the K. G. Luke Limited activ from North Fitzroy, Brunswick and Preston to this site.

The staff now numbers over 300 employees, and includes five original employees. There are also a considerable number long-service periods of fifteen years and over. A Staff Prov and Superannuation Fund and a Sick Fund for all employees been established.

The Company's products, marketed under the brand, "L mount," are noted for quality, and are well and favourably k throughout the Commonwealth. Showrooms have been establi in the Capital Cities in each State, and a wide range of pro includes—

Electro Plate Holloware, Cutlery, Spoons and Forks;
Stainless Steel Holloware, Fireside Furniture;
Badges, Medallions and Buttons;
General Hospital Equipment;
Hotel, Hospital and Cafe Food Equipment;
General Sheet Metal Work—Stainless Steel, Non-ferrous, Non-ferrous Castings.

Defence Work—Includes General Food Equipment, Press and Stampings, Radar Equipment, Medallions, Insignia Buttons, and many other components for the Navy, A and Air Force.

SUBSIDIARY COMPANIES:

Luke & Singer Pty. Ltd.—Hot Brass Pressings.

This branch of the business was originated by K. G. Proprietary Limited in 1939, and continued throughout the to produce shell fuses and innumerable other pressings for three Services.

On December 6, 1950, the Subsidiary was formed in con tion with the associated Companies of J. W. Singer & Sons and Mansill Booth Ltd., of England, the largest manufacture Hot Pressings in the United Kingdom.

Concentric Engineering Pty. Ltd.—Precision Brass Engine Includes Compression Fittings, Capillary Fittings, Gas and P Taps, Gas Thermostats, Stove Fittings and General Non-Fe Machining.

This Company is being developed in conjunction with the centric Manufacturing Co. Ltd., of Birmingham, England, an Proprietary was registered in June, 1952.

Ian Hendy Industries Pty. Ltd.—Heating Units for install in Homes, Factories, Schools, Hospitals and buildings.

The controlling interest in this Proprietary was purchase at January 1, 1953.

Mutual Wholesale Trading Co. Pty. Ltd., Sydney, is a wh owned subsidiary and was acquired to obtain premises in Sy

AGENCIES:

The Company is also Australian Agent for—

Sheffield Silver Plate & Cutlery Co., England; Subsidiary pany of Mappin & Webb Ltd., Sheffield, England—Cu Spoons and Forks.

Westall Richardson, Sheffield, England—Butchers' and T Cutlery.

John Maddock & Sons Ltd., Burslem, Staffordshire, England—Vitrified Earthenware and Dinner Ware.

E. W. Brain & Co. Ltd., Fenton, Staffordshire, England—Foley China Dinner and Tea Sets.

Hobourn Aero Components Ltd., Rochester, England—Electrical Equipment, Ocean Heaters.

Airco Reduction Co., 33 West 42nd Street, New York, U.S.A.—Hospital Equipment.

Victorian Agent for:

Jason Industries Ltd., Perth, W.A.—Domestic Aluminium Ware.

OMPANY'S WAR RECORD:

The Company commenced the manufacture of defence requirements a few hours after war was declared, and continued to produce innumerable precision components of high priority for all services. The factory worked throughout the war period for 24 ours a day until the cessation of hostilities. Equipment produced as used wherever our Forces were in action.

In conjunction with Die Casters Ltd., the Company helped to sign and finally produced some thousands of Austen Sub-machine uns and Spare Parts.

Other war activities were the introduction of the non-rust gun ish which has become a standard finish in Australia today, manucture of mine horns, an intricate mine component, rectification d improvement of American time-bombing mechanism, for which e Company received the personal thanks of General MacArthur. oduction of insignia, buttons and other requirements was undereken for the U.S.A. forces.

TURE PROSPECTS:

The Company has based its policy on sound financial planning d service to its customers which is on the highest plane. The mpany has steadily increased its business since its foundation 1925, and although perhaps the present period is not so buoyant in recent years, with the establishment of our new Subsidiaries mbined with new fields being entered into by the parent Comny, I have every confidence in the future of the organisation. e Company's plant is not bound to specialised goods, but is mpletely flexible to enter other phases in the general light engineering and sheet metal fields. Results for the six months to cember, 1952, are quite satisfactory.

INVESTIGATING ACCOUNTANTS' REPORT.

Proposal.

We understand that K. G. Luke Pty. Ltd. is to be converted a Public Company styled K. G. Luke Limited, and that a public ue of 203,046 Ordinary Shares of 10/- at par for cash is to be de under the terms of the Prospectus for which this Report has n prepared.

We are informed that the proposed new issue will be made in h a way that the Company, and therefore its subsidiaries, will future be assessable to income tax as public companies.

Option.

We further understand that the holders as at 2nd March, 1953, the 81,055 issued Ordinary Shares of £1 each in K. G. Luke Pty. L. will have an option to take up at par, at any time between July, 1955, and 30th June, 1956, 40,000 Ordinary Shares of 10/- ch in K. G. Luke Limited.

Preference Capital.

We are informed that the ownership and the rights attaching the present issued preference capital of K. G. Luke Pty. Ltd., ely, 50,000 Fixed Cumulative Redeemable 5% Preference Shares £1 each, and 31,900 Fixed Cumulative 8% Preference Shares of each, will not be affected by the terms of the proposed new ue.

Accounts.

As instructed, we have made an investigation of the Balance ets and Accounts of K. G. Luke Pty. Limited and its subsidiaries the undermentioned periods, namely—

Company	Period to 30th June, 1952	Audited by
. G. Luke Pty. Ltd.	5 years from 1st July, 1947	W. H. Tuckett & Sons, Chartered Accountants (Aust.)
ie & Singer Pty. td.	1½ years approx. from incorporation	
tual Wholesale rading Co. Pty. d.	3 years from acquisition of shares	R. H. Robertson, Chartered Accountant (Aust.), Sydney, for one year. W. H. Tuckett & Sons for two years

No audited Accounts are available in respect of the period he 30th June, 1952.

We have accepted the Accounts submitted to us as correctly ing forth the position of the respective companies and the reus of their trading at and to the respective balance dates, but a made certain adjustments for the purposes of this Report to he figures extracted therefrom.

We report as follows—

A—PAST TRADING RESULTS.

5. Adjusted Net Profits.

The following statement shows the percentages which adjusted consolidated net profits bear to proposed future capital—

	Year ended 30th June 1948	1949	1950	1951	1952
Adjusted Consolidated Net Profit before tax	£26,990	£35,040	£48,936	£47,216	£45,901
Less Provision for Taxation	8,844	11,692	16,500	20,616	19,754
	18,146	23,348	32,436	26,600	26,147
Less Preference Dividend Requirement	2,296	2,296	4,797	5,052	5,052
Balance available for Ordinary Shareholders and Reserves	£15,850	£21,052	£27,639	£21,548	£21,095
Percentage to proposed Ordinary Capital, £210,000	6.60%	8.77%	11.52%	8.98%	8.79%
Percentage to Ordinary Capital, £260,000, if option (Paragraph 2) is fully exercised	6.10%	8.10%	10.63%	8.29%	8.11%

B—DIVIDENDS PAID.

6. Rates of Dividend.

In accordance with the requirements of Part II of the Fourth Schedule of the Companies Act, we report that the rates of dividend paid by the Company in respect of each class of shares in respect of each of the years under review were as follows—

Year ended June 30—	5% Preference Shares (Issued 1949/50)	8% Preference Shares	Ordinary Shares
1948	—	8%	6%
1949	—	8%	8%
1950	5%	8%	13%
1951	5%	8%	13%
1952	5%	8%	18%

In addition to the abovementioned dividends declared and paid out of profits from year to year, a dividend was paid to Ordinary Shareholders out of tax paid profits during the period under review, namely—

June, 1949—30% (Bonus share issue).

C—FINANCIAL POSITION.

7. Revaluation of Freehold Land and Buildings.

Book values of Land and Buildings owned by K. G. Luke Pty. Ltd. were adjusted as on 1st July, 1951, to the values placed upon them by J. W. Styles & Son Pty. Ltd. in February, 1951. For the purposes of the Prospectus these properties have recently been revalued by the same valuers, and particulars of the previous book values and the two valuations are as follows—

	Gross book value 30th June, 1951	Valuation February, 1951, adopted as book value 1st July, 1951	Valuation February 1953
Queen's Parade, North Fitzroy	£38,407	£105,650	£107,625
Frith Street, Brunswick	31,064	56,170	56,170
Whitehorse Road, Mitcham	10,155	39,150	39,150
Plenty Road, Preston	6,500	24,070	24,070
	£86,126	£225,040	£227,015

The amount by which these assets were written up at 1st July, 1951, £138,914, was placed to the credit of an Asset Revaluation Reserve, and a sum of £7,500 written off the book value of shares in a subsidiary charged thereto, leaving a balance of £131,414 at credit of the Reserve Account at 30th June, 1952.

8. Bonus Issue of Shares.

A bonus issue of 57,422 Ordinary Shares of £1 each in K. G. Luke Pty. Ltd. has since been made to holders of the 81,055 Ordinary Shares in that Company from the Asset Revaluation Reserve referred to in the foregoing paragraph, reducing the balance by £57,422 to £73,992.

9. Valuation of other Fixed Assets.

Machinery, Plant and Equipment and Motor Vehicles remain in the books of K. G. Luke Pty. Ltd. at cost, less a Reserve for Depreciation, £58,319, but for the purposes of this Report we have transferred the Depreciation Reserve to Asset Revaluation Reserve and adjusted gross book value at 30th June, 1952, to valuation as follows—

K. G. Luke Pty. Ltd.	Gross book Value 30th June, 1952	Valuation, 6th March, 1953 (adjusted to 30th June, 1952)	By
Machinery, Plant, Equipment and Motor Vehicles	£102,228	£136,524	J. W. Styles & Son Pty. Ltd.

(Continued on next page)

K. G. LUKE LTD. (Contd.)—

As to the Fixed Assets of the subsidiary, Luke & Singer Pty. Ltd., no adjustment has been made to the book value of Land and Buildings, but special initial depreciation at 40%, amounting to £12,886, written off Machinery and Plant at 30th June, 1951, has, for the purposes of this Report, been transferred to Asset Revaluation Reserve, leaving that asset valued at cost less depreciation written off in respect of the year ended 30th June, 1952.

Particulars of valuations recently obtained for the purposes of the Prospectus are as follows—

Luke & Singer Pty. Ltd.	Book Value 30th June 1952	Valuation March, 1953 (adjusted to 30th June, 1952)	
Land and Buildings	£40,624	£42,074	By J. W. Styles & Son Pty. Ltd.
Plant and Machinery, etc.	58,397	59,628	
	£99,021	£101,702	

10. Statement of Assets and Liabilities.

The following statement shows what would have been the adjusted consolidated financial position of the Company and its subsidiaries at 30th June, 1952, had the bonus share issue and the proposed public issue of shares been made at that date, viz.—

Fixed Assets—			
Land and Buildings	£267,375		
Less Mortgage	22,955		
		£244,420	
Machinery, Plant, Equipment and Motor Vehicles		193,646	
			£438,066
Investments—			
Shares in Companies			6,650
Current Assets—			
Stock	267,262		
Debtors	121,328		
Prepayments	509		
Cash	307		
		389,406	
Less Current Liabilities—			
Creditors	103,950		
Bank Overdraft	114,033		
Deposits	8,354		
Provision for Dividends	17,116		
Provision for Taxation	25,000		
		268,453	
			120,953
			565,669
Less Interest of Minority Shareholders in Subsidiary			45,361
			520,308
Intangibles—			
Goodwill		7,986	
Conversion and underwriting expenses (estimated)		4,500	
			12,486
			£532,794
Representing Shareholders' Funds, as under—			
Issued Capital—			
Preference Capital		£81,900	
Ordinary Capital		240,000	
			£321,900
Reserves and Unappropriated Profits—			
Asset Revaluation Reserve		173,179	
Asset Realisation Reserve		25,113	
General Reserve		5,000	
Tax Paid Reserve		66	
Unappropriated Profits		7,536	
			210,894
			£532,794

11. Net Tangible Asset Backing.

From the Statement of Assets and Liabilities set out in th foregoing paragraph we have calculated the net tangible ass backing for the Company's Ordinary shares as follows—

Fixed Assets		£438,0
Investments		6,6
Current Assets	£389,406	
Less Current Liabilities	268,453	
		120,9
		565,6
Less Interest of Minority Shareholders in subsidiary company	45,361	
Issued Preference Capital	81,900	
		127,2
Net Tangible asset backing for Ordinary Capital		£438,4

Net Tangible asset backing per share—

£438,408 / 480,000 = 18/3 appro — per 10 shar

If the option referred to in paragraph 2 of this Report is ful exercised, the issued ordinary capital of the Company will be i creased to £260,000 (in 10/- shares) and the effect of the increa adjusted back to 30th June, 1952, would be to reduce the n tangible asset backing for the Ordinary Shares to 17/8 per 10 share, the revised calculation being as follows—

Net Tangible asset backing for proposed ordinary capital (as above)	£438,408
Add Additional capital subscribed under option	20,000
Adjusted Net Tangible Assets	£458,408

Adjusted Net Tangible asset backing for Ordinary shares = £458,408 / 520,000 = 17/8 appro — per 10 sha

OBJECTS OF THE ISSUE.

Flexdrive Industries Limited has agreed to acquire the whole of the ordinary shares in the capital of Flexible Drives Proprietary Limited for a total consideration of £85,000. These shares are to be purchased from Messrs. J. J. McHale and M. W. Johns, who have agreed to accept in full satisfaction of the purchase price an aggregate sum of £15,007 in cash and £69,993 by way of the allotment to them of a total of 279,972 ordinary shares in the capital of this Company at 5/- each.

Flexible Drives Proprietary Limited has carried on business since 1944 as manufacturers and distributors of flexible shafting and casing, including speedometer cables and assemblies and farmflex units for use in post hole boring and digging. F.D. Instruments Proprietary Limited (manufacturers of instruments) is a wholly owned subsidiary of this Company.

It is intended that Flexible Drives Proprietary Limited and F.D. Instruments Proprietary Limited will continue to act as the operating Companies, and the new capital raised by the present issue of 200,000 ordinary shares of 5/- each at par will enable—

1. Payment to the Vendors of the cash consideration due upo acquisition of their shareholdings in the operating Com pany (total £15,007).
2. To provide for the expense of the issue; and
3. To provide working capital for the business conducted b the operating Companies.

HISTORY OF THE OPERATING COMPANIES

FLEXIBLE DRIVES PROPRIETARY LIMITED.

Early in 1939 a Partnership comprising Messrs. Johns a McHale was formed to manufacture and repair automotive instr ments and assemble Flexible Drives from imported materials.

It was soon proved that the latter was the most importa function of the business, and additional manufacturing space w secured at Malvina Place, Carlton. Wartime conditions, howeve precluded further importations, and it was this factor that led importing the necessary machinery from overseas to manufactu these materials, thus revolutionising the Flexible Casing a Shafting Industry in this country. All production during the ear war years was taken up with defence projects.

In 1944 the Company, now known as Flexible Drives Pr prietary Limited, was formed, and the present two storey buil ing in 426 Mt. Alexander Road, Ascot Vale, was acquired.

Today, the Company's main activities are concentrated on t manufacture of speedometer cables and assemblies, dash contro and industrial shaft assemblies.

The factory at Ascot Vale covers 20,000 sq. ft., is substantial built, has a modern plant and is well laid out for high speed pr duction.

Factory representatives have been appointed in New Sou Wales, Queensland, South Australia and Western Australia, a export markets established in South Africa, Singapore, Malay Suva and (the most substantial overseas market) in New Zealan

Today, the Company is still the sole manufacturer of Flexit shafting and casing in Australia. As a result of the tremendo post-war development in the automotive, aircraft and industr fields in this country, the future scope for "Flexdrive" produc is unlimited. Further, the immense range of speedometer cabl manufactured is unique, as no other manufacturer in the wo produces a speedometer cable to suit every make and model car, truck and motor cycle. Flexdrive components soon found a ceptance among car manufacturers, and are now used exclusive by all Australian manufacturers, both as initial equipment a replacement parts.

It is hoped with increased working capital to improve the da production of Flexible Shafting and Casing to satisfy the ev growing demand.

F.D. INSTRUMENTS PROPRIETARY LIMITED.

F.D. Instruments Proprietary Limited was incorporated 31st March, 1948, and was formed to take over the instrume manufacturing section of Johns & McHale, which formerly h been operating as a partnership since early in 1939.

The Company commenced operations in rented premises at Buncle Street, North Melbourne, and today still occupies the premises.

The chief function of the business, which has proved to highly successful, is the manufacture of automotive, marine a industrial instruments, including oil pressure gauges, water te perature gauges, oil temperature gauges, tachometers, ammete hourmeters, fuel gauges.

F.D. Instruments soon found acceptance among tractor ma facturers, and are now used by all Australian manufacturers b as initial equipment and replacement parts.

In addition to instruments, the Company also manufactu speedometer gearbox gears which are used in conjunction w Flexible shafting, and their activities are of particular impo ance to the parent Company, Flexible Drives Proprietary Limit

The whole of the Company's output is distributed by Flexi Drives Proprietary Limited, which includes a factory represen tive in New South Wales, Queensland, South Australia and West Australia, also a substantial export trade with New Zealand.

BOARD OF DIRECTORS.

J. J. McHale—Managing Director, Flexible Drives Pty. Ltd.; Managing Director, F.D. Instruments Pty. Ltd.
Mr. J. J. McHale has been associated with the automotive in-try for the past 20 years, and has played a major part in de-ping one of Australia's important secondary industries.
In 1939 he entered into partnership with Mr. M. W. Johns, narily to manufacture and repair automotive instruments and emble Flexible Drives. Later with the assistance of Mr. Johns helped pioneer the Flexible Shafting and Casing industry, and ufactured it for the first time in Australia.
The business proved so successful that in 1944 a company was rporated—Flexible Drives Proprietary Limited. A subsidiary pany—F.D. Instruments Proprietary Limited—to manufacture board instruments was also founded. Mr. J. J. McHale was sequently appointed Managing Director and Chairman of Direc- of both newly-formed organisations, and today still retains e positions.
Since the inception of the business, Mr. McHale has devoted time to the administration and sales of the Companies. In he visited England and U.S.A. to study latest post-war de-pments in production methods, and brought back many new improved ideas which have proved invaluable to the Company.

M. W. Johns—Director, Flexible Drives Proprietary Limited; Director, F.D. Instruments Proprietary Limited.
Mr. M. W. Johns has been associated with the automotive in-try for the past 25 years. He first commenced in business in in partnership with Mr. J. J. McHale. Then the main func- of the business was the servicing and manufacture of auto-ive dashboard instruments and assembling of Flexible Drives which the recognised skill and ability of Mr. Johns proved in-able.
When the war precluded the importing of raw materials led for the assembling of Flexible Drives, it was due to the tanding technical knowledge of Mr. Johns that the manufac- of Flexible Casing and Cable originated.
The pioneering of this industry later proved to be of im-se value to the Defence Department, and the early years of ufacturing were entirely devoted to this work.
When a Company—Flexible Drives Proprietary Limited—was ted in 1944, Mr. Johns was elected Director and Secretary, and y still retains the office of director.
He is also a Director of the subsidiary Company—F.D. Instru-ts Proprietary Limited.

Mr. C. Ramsay Rose—Bachelor of Commerce, Chartered Ac-tant (Aust.), is a member of the firm of Hall & Rose, Char-d Accountants (Aust.), and has been closely associated with Johns and Mr. McHale in the capacity of auditor and financial ser since they commenced business.

INVESTIGATING ACCOUNTANTS' REPORT.

In accordance with your instructions we hvae examined the ted accounts of the following Companies for the periods men-ed:—
Flexible Drives Pty. Ltd.—for the five (5) years ended 30th , 1952.
F.D. Instruments Pty. Ltd.—for the period 1st April, 1947, to 30th June, 1952.
We are advised as follows:—
hat since the 30th June, 1952, a Tax Free Dividend amounting o £1,923/17/- has been transferred from the Appropriation Ac-ount of Flexible Drives Pty. Ltd. and the same amount credited s a Dividend paid to the Shareholders' Loan Accounts with hat Company.
hat a Dividend of £738/18/1 was paid by F.D. Instruments ty. Ltd. to Flexible Drives Pty. Ltd. after the 30th June, 1952, hich amount in turn has been credited as a Tax Free Dividend o the shareholders of Flexible Drives Pty. Ltd.
hat a Tax Free Dividend of £103/8/11 was paid after 30th June y F.D. Instruments Pty. Ltd. to the outside shareholders of hat Company.
hat a Dividend amounting to £2,417/16/10 has been received fter the 30th June, 1952, by Flexible Drives Pty. Ltd. from peedometer Screenwiper Service Pty. Ltd. and that, subse-uent to this, arrangements have been entered into for the sale the shareholding held in this Company at cost price, viz., ,062.
hat arrangements have also been entered into for the pur-hase of the interests of the minority shareholders comprising 0 shares in F.D. Instruments Pty. Ltd. for £1,532/7/7, mak-g this Company a wholly owned subsidiary of Flexible Drives ty. Ltd.
hat a Holding Company—Flexdrive Industries Limited—is be-g formed for the purpose of acquiring all the issued ordinary hare capital of Flexible Drives Pty. Ltd., the purchase con-deration, viz., £85,000, to be satisfied by the issue of 280,000 - fully paid shares and a payment in cash of £15,000.
hat the public is to be invited to subscribe for 200,000 shares 5/- each at par.
n presenting the trading and financial figures of the two Com-s, we have done so on the assumption that they are wholly d subsidiaries of the Holding Company. Inter-Company Ac-n s have been eliminated.

DING RESULTS.

he consolidated Net Profits of the two Companies for the ds mentioned above, after making such adjustments as are dered appropriate, are set out hereunder—

	1948	1949	1950	1951	1952
Total adjusted Net Profits before Income Tax ..	£8,206	£13,483	£24,168	£26,116	£47,527
Less Federal Income and Super Taxes at current Public Company rates	3,193	5,567	10,376	11,252	20,887
	5,013	7,916	13,792	14,864	26,640
Less Amount necessary to provide for the Dividend on the 6% Preference Shares	960	960	960	960	960
Balance available for Ordinary Dividends and Reserves	4,053	6,956	12,832	13,904	25,680
Equivalent to a return on ordinary capital of £120,000 of	3.3%	5.8%	10.7%	11.5%	21.4%

No allowance has been made for any further profit which may be earned by the additional Capital to be subscribed; it is assumed that the Company will be a public company for the purposes of taxation.

No provision has been made for tax on Undistributed Profits because we are assured it is the intention to make a sufficient distribution to the Holding Company before the 30th April, 1953.

FINANCIAL POSITION.

We have accepted the Auditors' verification of Assets and Liabilities as at 30th June, 1952. The following valuations in respect to the undermentioned Fixed Assets were inspected by us—
(a) Freehold Lands and Buildings by Messrs. W. B. Simpson & Co., dated 13th November, 1950.
(b) Plant and Machinery as at the 30th June, 1951, by Mr. W. F. Birch, Lens Street, Coburg, dated 21st March, 1952.

In respect to (a), the book value was brought into line with the valuation figure; as regards (b), the valuation figure exceeded book value by £23,023, but no alteration has been made to the book value.

A consolidated statement of Assets and Liabilities as at the 30th June, 1952, of Flexible Drives Pty. Ltd. and F.D. Instruments Pty. Ltd. has been prepared on the assumption that the proposals as set out in the early part of our report have been carried out—

LIABILITIES AND SHAREHOLDERS' FUNDS.

Current Liabilities:			
Bank Overdraft (secured)		£15,868	
Sundry Creditors and Accrued Charges		16,271	
Shareholders' Loan Accounts		9,718	
Provision for Accrued Preference Dividend ..		480	
Provision for Income Taxes		23,978	
Total Current Liabilities			£66,315
Shareholders' Funds:			
Authorised Capital	£100,000		
Paid-up Capital—			
35,002 Ordinary Shares of £1 each	35,002		
16,000 6% Cumulative Preference Shares of £1 each	16,000		
Total Paid-up Capital		51,002	
Tax Paid Profits Reserve		6,122	
Capital Profits Reserve		2,736	
Profit and Loss Appropriation Account		43,782	
Total Shareholders' Funds			103,642
			£169,957

ASSETS.

Current Assets:			
Cash on Hand		£78	
Sundry Debtors, less Provision for Doubtful Debts		43,148	
Stocks on Hand		62,531	
Prepayments		11	
Total Current Assets			105,768
Fixed Assets:			
Freehold Land and Buildings at valuation plus cost of additions since 31/12/1950		30,274	
Plant and Equipment at cost less Depreciation		22,428	
Fixtures and Fittings at cost less Depreciation		5,772	
Motor Vehicles		3,213	
Amenities		572	
Designs and Drawings—at cost		150	
Tools		808

Intangible:			
Excess over par value of shares in Subsidiary Company			972
			£169,957
The total Shareholders' Funds—as per the above consolidated Balance Sheet at 30th June, 1952—are			£103,642
Less Preference Shareholdings			16,000
Net Assets Value to be acquired by Flexdrive Industries Limited for £85,000 payable £15,000 in cash and £70,000 in fully paid 5/- shares			87,642
Less Goodwill included therein			972
			86,670

(Continued on next page)

FLEXDRIVE INDUSTRIES LTD. (Contd.)—

to which is added the New Capital to be subscribed by the public—200,000 5/- shares at par ..		£50,000
Less Estimated Expenses of flotation and issue	£3,000	
Cash consideration to be paid to Vendors	15,000	
	18,000	
		32,000
Net Tangible Assets after Public Issue		£118,670

On a total issued Capital of 480,000 shares of 5/- each, the Assets backing is therefore equivalent to 4/11 per share.

No account is taken of any profit which may have been earned since the 30th June, 1952. Statements furnished us by the Auditors to the Companies for the half-year ended 31st December, 1952, show that the businesses have been well maintained for that period.

TAX PAID PROFITS OF SUBSIDIARY.

Shareholders' Funds of Flexible Drives Proprietary Limited include profits amounting to £6,121/14/- earned prior to 30/6/52 in respect of which tax pursuant to Division 7 of the Income Tax Assessment Act has been paid. It is the intention of the Directors to declare a dividend to Flexdrive Industries Limited and to make this fund available to shareholders of the Company by way of a dividend free of tax as and when future profits are available to replace any amount so distributed.

DIVIDEND.

The shares of this issue will rank for dividend pari passu w the shares to be issued to the Vendors and will participate in s dividends to be declared.

LISTING ON STOCK EXCHANGE.

It is intended as early as practicable to apply to The St Exchange of Melbourne for the Company's shares to be listed quotation.

UNDERWRITING COMMISSION AND BROKERAGE.

In the terms of the underwriting agreement the Underwrit will receive a commission and brokerage of two pence farth per share on the whole of the shares of the present issue.

ALLOTMENT.

The Board of Directors will proceed to allotment as early practicable after the closing of the issue, but not later than twenty-ninth day of April, 1953. In the event of the issue be over-subscribed, allotment will be made at the discretion of Directors.

The Directors reserve the right at their discretion to excl from allotment any application signed by an applicant who pears to be resident or located outside the Commonwealth of A tralia and Commonwealth Territories.

THE COLONIAL SUGAR REFINING COMPANY LIMITED

(Incorporated under the Companies Act 1874 of the State of New South Wales on the First day of July 1887.)

Registered Office: 1 O'CONNELL STREET, SYDNEY.

ISSUE AT PAR (£100) OF £3,000,000

5%

REGISTERED MORTAGE DEBENTURES

Redeemable on 30th September, 1963, or, at the option of the Company, upon at least six months' prior notice of redemption having been given, on 30th September 1960, or on any half-yearly interest date thereafter.

SUBSCRIPTION LISTS NOW OPEN

Full prospectus and application forms obtainable from:

BANK OF NEW SOUTH WALES

THE COMMERCIAL BANKING COMPANY OF SYDNEY LIMITED and MEMBERS OF STOCK EXCHANGES.

The Directors will proceed to daily allotment of the debentures as from the opening date of the Issue. Interest will accrue as from allotment date on amounts from time to time paid up on the debentures.

Applications will be received only on one of the application forms referred to and endorsed upon a printed copy of the full Prospectus and should be lodged at the principal office in Sydney, Melbourne, Brisbane, Adelaide, Perth or Hobart, of the Bank of New South Wales or The Commercial Banking Company of Sydney Limited.
The issue will close on the 27th May, 1953, subject to the right of the Directors of the Company to close the Issue at an earlier time without prior notice.

DIRECTORS:

EDWARD RITCHIE KNOX, 22 Victoria Road, Bellevue Hill, Sydney, Chartered Accountant (Aust.), Chairman.

JOHN GORDON CROWTHER, Australian Club, Macquarie Street, Sydney, Solicitor.

JOHN WALLACE DUNLOP, 120 Bellevue Road, Bellevue Hill, Sydney, Merchant.

GREGORY BLAXLAND KATER, 106 Victoria Road, Bellevue Hill, Sydney, Electrical Engineer.

WILLIAM JOHN VICTOR WINDEYER, Q.C., Harrington Avenue, Warrawee, Sydney, Barrister-at-law.

TRUSTEES FOR THE DEBENTURE HOLDERS:

PERPETUAL TRUSTEE COMPANY (LIMITED), 33-39 Hunter Street, Sydney.

UNDERWRITING BROKERS:

IAN POTTER & CO., 360 Collins Street, Melbourne, Members of The Stock Exchange of Melbourne, who will take firm £1,000,000 of the Issue.

STATUTORY INFORMATION:

(a) The minimum amount which in the opinion of the Directors must be raised by the Issue of debentures is £3,000,000. This amount is required to be provided in respect of each of the following matters:—
  (i) The purchase price of any property purchased or to be purchased which is to be defrayed in whole or in part out of the proceeds of the Issue is Nil, but the estimated amount which will be expended in respect of extensions and improvements to buildings and additions to plant, machinery and equipment required for the expansion of the business carried on by the Company and its subsidiaries is £2,940,000.
  (ii) Preliminary expenses payable by the Company, Nil. Expenses of the Issue (including underwriting commission and brokerage amounting to £45,000 payable to the underwriters in consideration of their agreeing to procure subscriptions for debentures of the Issue) are estimated to amount to £60,000.
  (iii) Repayment of any moneys borrowed by the Company in respect of any of the foregoing matters, Nil. But pending the expenditure of the sum of £2,940,000 as referred to in sub-paragraph (i) hereof, part thereof will from time to time be used in reducing bank overdrafts.
  (iv) Working capital, Nil.

(b) No amounts are to be provided in respect of the matters aforesaid otherwise than out of the proceeds of the Issue and the issue of debentures made by the Company in 1952.

The requirements of the Companies Act 1938 of the State of Victoria have not been fully complied with in this newspaper advertisement of the full Prospectus, which is dated the Twenty-first day of April 1953 and a duly certified copy of which has been filed with the Registrar-General of the said State.

Australian Iron & Steel Ltd.

Reg. Office: 28 O'Connell St., Sydney. **Melb. Share Register:** 422 Lt. Collins St., Melb. **'Phone:** MU 8001. **Directors:** C. Y. Syme (Chairman), Essington Lewis (Deputy Chairman), N. E. Jones (Manag. Director), I. M. McLennan (Asst. Manag. Director), L. Darling, Hon. Sir W. G. Duncan, M.L.C., C. H. Hoskins, Sir Lennon Raws, C.B.E., L. G. Darling. **Auditors:** Fuller, King & Co.

25th Year ended November 30, 1952. Meeting March 27, 1953.

Steel production was 3,000 tons lower at 662,000 tons, but pig iron production was 52,216 tons higher than in the previous year, as a result of increased capacity. Profit rose by £163,000 to £713,000 after depreciation of £1,699,000 (up £455,000).

	1952.	1951.	1950.	1949.

In addressing shareholders at the Annual Meeting held on March 27, the Chairman, Mr. C. York Syme, said:

Since our last Annual Meeting, Mr. Essington Lewis has retired as Chairman of this Company, and the Board has appointed me in his place. The resignation of Mr. Lewis was accepted with very great regret, but he agreed to continue on the Board and to occupy the position of Deputy Chairman. It is most fortunate that we will continue to have the benefit of his outstanding experience and wisdom, and I am personally very grateful to have his support.

Operating Results.

From the Statement of Accounts, it will be seen that the operations for the year ended 30th November, 1952, resulted in a net profit of £713,000 after providing £1,699,000 for depreciation and making allowance for all other appropriate charges. Results have to some extent been helped by export sales of pig iron surplus to Australian requirements.

The amount of depreciation is higher than last year due to the necessity of making provision for new plant and equipment installed at present day inflated costs. We continue to calculate depreciation at normal rates on original cost, although it is obvious that this method will not provide sufficient funds to replace plant which was acquired in periods of lower cost.

The margin between costs of production and the net realised prices of our products, however, makes it very difficult at present to provide further funds for this purpose, particularly when it is realised that although income tax legislation recognises depreciation as a real element of cost, allowance for income tax is based on original values of plant and equipment, and any extra provision made for depreciation on a replacement basis would be disallowed for income tax purposes.

This problem is causing concern both in England and in U.S.A., but it is particularly disturbing in this country on account of the rapid growth of inflation in recent years.

The principal balance sheet movements were as follows:—

Increase in Freeholds, Leaseholds and Plant and Machinery	£6,425,000
Increase in Stocks and Debtors	2,772,000
	£9,197,000
Less—Reduction in Commonwealth Government Stocks and Bonds	2,000
Net increase in Assets of	£9,195,000
Represented on the other side by—	
Increase in General Reserve	250,000
Increase in Profit and Loss Appropriation Account ..	51,000
Increase in amount due to The Broken Hill Proprietary Co. Ltd.	4,087,000
Loan on Mortgage	1,500,000
Increase in amount due to Bankers, Creditors, etc. ..	3,307,000
	£9,195,000

An amount of £250,000 has been transferred to General R serve which now stands at £2,500,000.

At our last meeting you were advised that the Company w entering into arrangements whereby further funds to assist financing its large expansion programme would be available way of loan. These arrangements have now been satisfactor concluded and availed of to the extent shown as "Loan on Mo gage" at date of balance.

Production.

Plant and machinery have been maintained in good order.

The production of 662,000 tons of steel ingots was 3,000 t lower than the preceding year, whilst pig iron was 52,216 t higher as a result of increased capacity.

Increasing quantities of coking coal have reflected the progr in the mechanisation and expansion of the Company's South Collieries and an improvement in the availability of Colliery labo

At Bulli Colliery, in addition to the surface installation, m has been done in the preparation of underground marshalling ya and haulage ways. These improvements, together with the C Measure Drift, which is expected to come into operation later year, will provide additional coking coal for our own requireme

The Kemira tunnel, which when completed will be about 15 feet long, has been driven 12,170 feet to date and has made nection with a staple shaft from the No. 1 Seam in Mt. K Colliery. Pending completion, developmental work is continuin the area where the tunnel will connect with the underground w ings of Mt. Keira Colliery and installation of surface plant is advanced.

At the Steelworks, construction of No. 3 Blast Furnace been completed and production commenced on 27th August The furnace is operating satisfactorily, and the best monthly put to date is 43,400 tons of pig iron.

No. 2 Blast Furnace was closed down for relining on November, 1952, and recommenced on 7th March, 1953.

With increased pig iron capacity and the improvement in s production, our attention has been directed to exporting sur tonnages above Australia's immediate needs. Overseas orders pig iron and billets have been accepted and quantities have alr been despatched.

Construction Programme.

Major construction works completed since our previous m ing are 24 additional by-product coke ovens, 3 new Soaking and installation of the new Blooming Mill motor.

Other major works well in hand include additions at the Hearth, Blooming Mill, Soaking Pits, Power Section, and the Unloading Plant at the Company's Jetty at Port Kembla.

Foundations for the Hot Roughing Mill and Plate Finis Section are almost complete. A large quantity of overseas eq ment is to hand and local materials are being delivered freely. Installation of equipment is well advanced.

Foundations for the Hot Finishing Section are in hand installation of equipment will follow the Hot Roughing Secti

It is pleasing to note improvement in the availability of la and materials, and as a result we are now making much b progress with our construction programme.

The help afforded by the Department of Immigration and Department of Labour & National Service, together with our own efforts, have resulted in most of our labour requirements being met. There is still a shortage in some skilled trades, but the position is gradually improving.

Increasing quantities of iron ore are now being shipped to Port Kembla and Newcastle from the Yampi deposit at Cockatoo Island.

Over recent months shipping space and railways rolling stock have improved, and broadly speaking are in keeping with plant needs. The Australian Stevedoring Industry Board has increased the waterside labour force at Port Kembla from 325 to 440, and this is being supplemented whenever possible by temporary transfer of men from other ports. As a result, we should experience a better turn round of ships at that port.

Preference Dividend at the rate of 7½% per annum has been maintained, and a dividend of 6d. per share, amounting to £337,500 was paid on the ordinary shares on 30th May, 1952.

Directors and Staff.

Following on a serious illness, Mr. H. B. Piper resigned from the Board on 31st January last. In accepting Mr. Piper's decision, the Board decided to place on record their sincere appreciation of the valuable service he has rendered to the Company, and express the hope that he will shortly experience an improvement in health.

The vacancy on the Board has been filled by the appointment of Mr. L. Gordon Darling.

In conclusion, it is my pleasure to record the appreciation and thanks of the Directors for the efficient service rendered by employees, staff and management throughout the year.

Bayley & Grimster Ltd.

Electrical Contractors, Switchgear Manufacturers.

g. Office: 1 Stafford St., Abbotsford, Vic. **'Phone:** JA 5143. **Directors:** A. A. Bayley (Chairman), W. E. J. Grimster, G. E. Fitzgerald, A. L. Bayley (Manag. Director). **Auditors:** Buckley & Hughes.

28th Year ended June 30, 1952. Meeting November 14, 1952.

Profit rose by £2,676 to £16,212 on larger capital. Dividend rate was adjusted from 20% to 10% following a bonus issue on 5-for-4.

Sales were well maintained during the year, but forward prospects are limited by credit restrictions and shortages of loan moneys for public works.

Carlton & United Breweries Ltd.

Reg. Office: 16 Bouverie St., Carlton, Vic. **'Phone:** F 0431. **Directors:** N. J. Carson (Chairman), J. M. Baillieu, M. H. L. Baillieu, Edward Cohen, G. G. Coulter, A. R. Creswick, Frank Levy, R. T. Morell. **Auditors:** Wilson, Bishop & Henderson; Davies, Boldeman & Co.

45th Year ended June 30, 1952. Meeting November 27, 1952.

Profit fell slightly by £13,009 to £450,762, due to increasing costs, which could not be passed on to the consumer because of price control. A steady dividend of 6¼% was paid on ordinary and "Z" shares.

	Carlton & United and Subsidiaries.			Carlton & United Breweries Ltd.
	1952.	1951.	1950.	1952.

Reserves and undiv. profits*	7,401,718	7,313,118†	4,772,322†	6,517,514

*Include £40,241 surplus on sale of freehold in 1950, and £5,371,484 asset revaln. surplus in 1951; debited in 1951 with £2,925,000 bonus issue of £1 "Z" shares.
†Adjusted for sundry taxn. adjustments.

Beer production rose by three million gallons to over forty-five million gallons. Excise paid at the rate of 7/2 per gallon amounted to 14.3 million pounds.

The organisation, which owns 7.3% of the hotels in the State, proposes to rebuild two of its city hotels and other hotels are to be reconstructed when building restrictions are lifted.

Ordinary shares are not held directly by the public, but mostly by the following companies listed on the Stock Exchanges—

Melbourne Co-operative Brewery Co. Ltd.
Carlton Brewery Ltd.
Castlemaine Brewery Co. Melbourne Ltd.
The Foster Brewing Co. Ltd.
The Shamrock Brewing Co. Ltd.
McCracken's City Brewery Trust Ltd.

The "Z" ordinary shares are non-voting and are entitled to rank pari passu with ordinary shares in all dividends. In a winding-up the "Z" shares would rank pari passu with ordinary shares for return of capital but would not participate in surplus assets. Net tangible asset backing is £40/15/3 for each £1 preference, £2/3/- for each £1 ord. and "Z" ord. share.

"The beer excise paid to the Commonwealth Government for 1951-52 amounted to £56,915,431, of which this company's share was £14,273,870," stated the Chairman, Mr. N. J. Carson, C.M.G., in addressing shareholders at the Annual Meeting on November 27. Mr. Carson's remarks read:

The financial year just past has been one of considerable difficulty for your company with costs of raw material and wages constantly outpacing any price rises for our products authorised by the Prices Commissioner. One of the great difficulties that appears to face the company in the near future is that, while the prices for some of the main raw materials used by the company are not controlled, our finished article is subject to very close control indeed. Our inconsiderable unit profit margin offers little or no opportunity to meet such cost increases, and the problem is made all the more difficult of solution by reason of the fact that authorised increases in our selling prices must inevitably lag behind increases in material, wages and service costs.

Profit.

This year net profit was £414,586 as against £419,625 last year, a falling off of £5,039. This was on a production of 45,134,616 gallons with shareholders' funds standing at £12,367,514. In 1938-39, with a production of only 25,197,922 gallons, and using shareholders' funds totalling £4,870,692, your company made a net profit of £528,892. It will be seen, therefore, that shareholders have been compelled to leave in the business large sums of their own funds for the working and development of the industry and have not been able in any way to receive an advantage from the appreciation of their fixed assets.

Excise Collection, £56,915,431.

Prices of our product have risen, mainly as the result of increases in Commonwealth Beer Excise, of which the latest of 2/7 per gallon in September, 1951, brought the excise rate to 7/2 per gallon or 1/2.1/3d. per bottle. The beer excise paid to the Commonwealth Government for 1951-52 amounted to £56,915,431, of which this company's share was £14,273,870. Beer excise collection in 1918-19 were only £2,862,760 and in 1938-39, £7,288,579. In spi of such extremely heavy excise loadings and steep rises in produ tion costs, careful management has enabled us to hold rises in t retail selling price of our product at a percentage level lower tha the percentage increase in the basic wage during a comparab period. The retail selling price of beer is 2/6 a bottle, yet the n margin made by the company per bottle is only a fraction of penny.

Effect of Taxation.

It is an economic axiom that it is the duty of business make a profit, and one that not only ensures an equitable retu to shareholders, but also enables reasonable plant extension a replacement to be financed within the company's accumulated r sources. Most overseas taxing authorities appreciate this point their approach to company taxation. This is not so in Australi and thus your company is finding increasing difficulty in financi expansion without obtaining fresh funds.

In spite of the increased production outlined earlier—which recent years has been of the order of three million addition gallons a year—we have not yet succeeded in filling the demand f the company's products. While it is difficult to assess the futu demand, it is apparent that the unique public acceptance of o products assures for the company an ever-increasing market, whi it is our duty as well as our wish to fulfil.

Hotel Properties.

Concerning the company's hotel properties, I would again li to stress that we own only 7.3% of the hotels in the State. Eve effort is being made to improve the standard of such hotels, b our efforts must of necessity have only a small impact on t hotel industry in general. May I remind you that our effecti control over the conduct of our own freeholds is limited to t extent that they are required by law to be operated by leasehol ers and not under direct management. We are aware of our r sponsibility to set standards for the industry as to operation, mai

tenance, and reconstruction of hotels. In the financial year just past, a substantial sum has been spent on improvements to your company's hotels, and the recent lifting of the Government control of building has cleared the way for a greatly accelerated programme in this field. It is your company's intention to commence rebuilding operations almost immediately on two of its city hotel properties, and later on several more in the city, suburban and country areas. In these plans every attention is being given to meeting the demand for up-to-date accommodation and dining facilities. Where possible overseas trends in this direction will be adapted to local conditions.

The Government regulations in the State of Victoria impose on the hotel industry conditions which are not met with in most overseas countries. Such local factors bring about considerable difficulties in planning and operating hotels. To build and operate "luxury hotels" it is essential to have a community which can afford luxury prices, or a sufficiently large tourist population which can and will support such hotels.

Public Demand Licensing Reform.

Constantly, and with increasing emphasis, there comes a demand for more liberal licensing laws. With this manifest public opinion the Directors and Management of your company are in accord. They feel that a more realistic approach to the Licensing Act in general, and the question of trading hours in particular, represents the true wish of the community and is essential if sane and civilised drinking habits are to be substituted for the present undesirable crowded and rushed hotel conditions.

The company is unfortunately involved at present in an industrial dispute with one of the trade unions. The dispute has resulted in the closing down of the company's plants and cessation of deliveries of beer to the public. The Directors and Management greatly regret that such a position has arisen, but feel that a vital principle is involved—the right of Management to control on behalf of the shareholders the conduct and operation of the plant which is the property of the shareholders, and to take such disciplinary measures as are necessary in their interests. In this action we feel that we have the support not only of the shareholders of this company but of the public in general.

Conclusion.

In conclusion, I would like to again express my confidence and the confidence of my fellow directors in the future of the company, and my faith in the ability of the present executives and staff to secure such a future.

I wish to tender the thanks of the Board for the great loyalty and enthusiasm that has been shown by all members of such executives and staff during a difficult and troubled time, and to assure them that the Directors appreciate that such loyalty is a real and very valued asset of Carlton & United Breweries Ltd.

We lunch together every week.....

. . . we're both in the same line of business; however, yesterday talk swung away from business and we got talking about our families and their future if we were not around in our usual places.

Arthur made a suggestion that as both our businesses were akin, maybe one could accept the responsibility of both the shows if anything should happen. My reply was . . .

but we're not that friendly.....

after all, if I can beat you to a contract I will and you'd do the same; no, that wouldn't work. Anyway, I've organised things for MY family . . . I've appointed a trustee company to look after their interests by looking after *my* estate—and it's no trade secret who they are, it's NATIONAL TRUSTEES.

National Trustees is an organisation retaining a staff of experts experienced in all phases of business and estate management; an organisation which provides a personal *interest in providing for your family all those things you have worked for . . . write, 'phone or call for literature explaining the service offered by NATIONAL TRUSTEES.*

NATIONAL TRUSTEES

EXECUTORS AND AGENCY CO. OF AUSTRALASIA LTD.

Chandlers (Australia) Ltd.

Holding Company in Broadcasting, Radio and Electrical Industries.

Reg. Office: Cnr. Albert and Charlotte Sts., Brisbane, Q'land. **Victorian Share Office:** Hancock & Woodward, 352 Collins St., Melb. **'Phone:** MU 7438. **Directors:** Sir John B. Chandler (Chairman), A. S. Hulme, V. F. Mitchell, F. B. Chandler, A. W. Munro. **Auditors:** R. G. Groom & Co.

3rd Year ended June 30, 1952. Meeting December 4, 1952.

Although group turnover was a record, trading conditions were difficult, particularly in the latter part of the year. Due to rigidity of expenses, combined with falling turnover, profit fell by £23,000 to £41,535. As stocks and overdraft were high, no dividend was paid, although earnings on ordinary capital were 11.3%.

With headquarters in Brisbane, the organisation trades mainly in Queensland and New South Wales. A subsidiary, Gloria Light Pty. Ltd., also operates in Victoria, but business has not yet been developed in that State.

As wholesale and retail distributors, the group holds the franchises for a number of leading products in the electrical industry, including refrigerators, stoves and radios. An important interest in Queensland is distribution of products of the British Hoover Company.

"During recent months our purchases have been rigidly controlled and considerable stock reductions have been effected which have improved the liquid position," stated the Chairman, Sir John Chandler, at the Annual Meeting on December 4. He said:—

When I addressed you last year, the business of the company was exceedingly prosperous and sales by the subsidiary companies were at a record level. This continued until the end of the calendar year 1951, but since then there has been a substantial decline in sales in the electrical industry generally. Notwithstanding that the turnover of the subsidiary companies for the financial year under review was a record, the sudden drop in sales in the second half of the year without a corresponding reduction in expenditure, adversely affected profits for the year which were reduced to £80,582. Out of this £8,337 was appropriated to the Staff Provident Fund and £39,047 as provision for taxation, leaving a balance of £33,198 to add to previous unappropriated profits of £54,077.

Liquidity

In order to ensure continuity of supplies, orders for goods which the subsidiary companies handle, must in many cases be placed well in advance. Because of the slackening in sales, manufacturers were able to catch up on back orders, with the result that our stocks increased considerably during the latter half of the year and affected the liquid resources of the company group. This, together with the drain on these resources of taxation for the year in excess of £100,000, has led your Directors after the fullest consideration regretfully to recommend that no dividend be paid on the ordinary shares although sufficient profits were made for this purpose. The belief that this decision is in the best interests of the shareholders is strengthened by the considered opinion that we are facing into a year of economic adjustment when consolidation and a careful husbanding of available funds will materially assist the company group to the benefit of all shareholders.

Current Conditions

The current year's sales are showing a steady improvement but have not reached previous levels. During recent years the effect of price fixation on margins has been to force gross profits down to a very low level making necessary a very large volume of sales to meet ever-increasing expenditure and particularly the steeply-mounting level of wages. The prices of most of the goods which our subsidiary companies sell have now been decontrolled in this State but in many cases excessive competition occasioned by large stocks in the hands of manufacturers and merchants has kept prices at a level which allows only very small margins of gross profit. It is hoped that changed conditions will make for a greater degree of efficiency which will permit fair margins of profit for merchants who carry on the necessary services of distributing the Nation's goods.

During recent months our purchases have been rigidly controlled and considerable stock reductions have been effected which have improved the liquid position and every effort is being made to effect further improvement. As the bulk of the business done by our subsidiary companies is wholesale, time necessarily elapses before stock reductions become effective.

Capital

As foreshadowed in my address last year application was made to the Capital Issues Board for permission to raise additional capital. Consent however was refused and in view of changed conditions your Directors do not at the present time contemplate further approaches but are hopeful by reducing some of the less profitable activities of the trading subsidiaries to be able to finance from within the company's own resources.

Long Service Leave

Queensland legislation of the year under review amended the Industrial Conciliation and Arbitration Acts to provide for long service leave for employees. This has imposed further liabilities upon the company group, but fortunately we were already ahead of this legislation in making provision for employees through the Staff Provident Fund which is expected to take care of the liability under the law. Your Directors have always deemed it wise to encourage the staff to take the greatest possible interest in the business and believe that one of the most useful methods of doing this is to demonstrate the company's interest in the staff's welfare by assisting to provide for their retirement. Funds appropriated to the Staff Provident Fund do not have to be paid immediately in cash so that they are not an immediate call on liquid resources.

Effect of Drought

You will recall my comments in my address to you last year when I warned that the outlook for the year now passed was t

me extent obscured by threat of drought. Unfortunately the ditional impact of a serious drought last summer on other re-ssive economic conditions proved the warning more than justi-d. Since then useful relief rains have fallen but large areas of untry are still suffering badly and a really good wet season ould relieve much anxiety and distress and provide a most useful siness tonic.

Radios and Television

A return of the Sales Tax rate on radio receivers to 20 per nt. from 33⅓ per cent. has helped recovery in the radio industry. uring the war years Winston Churchill said: "Radio techniques lie the very heart of our affairs"—a pronouncement which supports sitive action towards establishing television in Australia as some-ing both desirable and essential. There seems to be no logical ason why the Australian people should be prevented from partici-tion in the benefits and pleasures provided by scientific progress. here are moreover very sound reasons for the encouragement of luable research, the training of highly-skilled technicians and the ll development in Australia of an industry fulfilling a key role peace or war. The combination of Government and commercial terprise has already given this country one of the world's out-anding broadcasting systems and there is every reason to believe at the same combination can successfully give our people tele-sion.

New Branches

During the year the New South Wales subsidiary, John Martin ty. Limited, opened a Branch in Lismore in attractive and admir-ly located premises. Also a Branch of Chandlers Pty. Ltd. was tablished in Maryborough in conjunction with Mr. A. P. Wynne who was that subsidiary's principal distributor in that area. Both the Lismore and Maryborough developments are making good progress and will assist in giving us more effective distribution of franchise goods and your Directors anticipate will also contribute to profits.

The interesting development represented by last week's State legislation affecting a well-known power supply authority has some disquieting elements particularly in relation to the possibilities of trading in electrical goods at an unfair advantage over free enterprise similarly engaged. Only time will show to what extent the new public authority trading competitively with free enterprise and paying no taxation will keep its basis of trading competitively fair.

Future

Prevailing economic conditions are posing numerous problems which are earnestly engaging the attention of your Directors, but all members of your Board have complete confidence in the future prospects of the company.

Electric appliances are increasing in utility to and popularity with an ever-growing population. In Queensland's climate the equipment of homes with domestic labour-saving devices is being progressively recognised as essential and our trading subsidiaries may well be described as "Merchants of better living."

Appreciation

I express my appreciation of the enthusiasm and co-operation of the Directors who have devoted their time unsparingly to the company's business. Also I express my appreciation to the managers and staff of the company and its Branches for their active and loyal help during the year.

Dalgety & Co. Ltd.

ool Brokers, Merchants, Shipping and Insurance Agents, &c.

Gunnersen Nosworthy Ltd.

Distributors of Timber Products.

Reg. Office: 67 Yarra Bank Rd., South Melb. **'Phone:** MX 4621. **Directors:** T. W. Gunnersen (Chairman and Manag. Director), G. H. Gunnersen (Deputy Manag. Director), R. S. Turner, J. P. Harris, I. J. Manley. **Auditor:** J. W. Collins.

5th Year ended June 30, 1952. Meeting December 11, 1952.

Due to accumulation of stocks in the timber industry, trading was uncertain, particularly in the latter half of the year. Profit fell by £4,000 to £22,000 and dividend was reduced from 7½% to 5%.

†Credited in 1952 with £40,950 profit on sale of shares in Softwood Products Pty. Ltd., and debited with £5,119 loss on sale of shares in Tasmanian Plywood Mills Pty. Ltd.

Apart from its old-established timber merchandising business the company owns interests in several subsidiary and associated companies engaged in the production of timber and manufacture of timber products, as detailed in the Chairman's Address hereunder.

During the year the company's 45% holding in Softwood Products Pty. Ltd. was acquired by Softwood Holdings Ltd. and a capital profit of £40,950 was derived and the proceeds re-invested in the new company.

A 50% interest in Tasmanian Plywood Mills Pty. Ltd. has been sold during the present financial year, but the loss of £5,119 has been provided for in the accounts at June 30, 1952.

"The importation, free of duty, of a tremendous quantity of plywood, building boards, etc., dealt a severe blow to our Tasmanian and Mansfield interests, and has made reduction in our stocks most difficult," stated the Chairman, Mr. T. W. Gunnersen, at the Annual Meeting on December 11. His address reads:

An examination of the statement of earnings and appropriations for the year reveals satisfactory results, considering the difficult and uncertain conditions experienced.

Trading Conditions.

These difficult trading conditions have continued until the present time and made the recommendation of the reduced ordinary dividend in the best interests of the company. The financing of our heavy stocks continues to cause your Directors much concern, but the company's overdraft is being steadily reduced from its peak of early 1952. As mentioned in the Directors' Report, the importation, free of duty, of a tremendous quantity of plywood, building boards, etc., dealt a severe blow to our Tasmanian and Mansfield interests, and has made reduction in our stocks most difficult.

Although the entire Australian market is greatly overstocked in many of our lines, some other lines are in short supply. Interstate companies of which this company is a shareholder continue to supply a large portion of our requirements, and future supplies from these sources seem assured. However, interstate coastal freight is still uncertain, and supplies, particularly from North Queensland, are irregular. Dividends from our investments remain at the 1951 level.

Wooden Box Shooks.

The demand for wooden box shooks, in which we have been so largely interested, has declined, due mainly to the greatly increased supplies of fibre board containers from recently installed plants.

Extra Storage.

The premises of J. S. Lee & Sons (Melbourne) Pty. Ltd. adjoining our own, will shortly be available for storage of goods. Arrangements are now being made to dispose of the major part of the plant and stock by auction in February next. The resulting additional storage space will be of value to your company.

Softwood Holdings Ltd.

Reference was made in the Directors' Report to the recent investment of 120,000 fully paid 10/- shares in Softwood Holdings Limited; the activities of this group continue to be on a satisfactory basis. That an associated company paid £60,000 cash to acquire an equal holding to that of your company will no doubt interest you.

Mansfield Timber Products Pty. Ltd.

The general slackness of the building trade is having a serious effect on this company's activities, as the demand for the lines it produces is so small that the company has, for the time being, been forced to almost close down; overhead expenses have been reduced to a minimum.

Tasmanian Plywood Mills Pty. Ltd.

Although the sale of the shares in this company was not finalised until early in the present financial year, provision has already been made for a small loss on realisation.

Late A. G. Sinclair.

It is with sincere regret that we recall the recent death of one of your Directors, Mr. A. G. Sinclair. Mr. Sinclair had been associated with the company for some 35 years as a Director and Secretary.

Accounts.

I do not propose to deal in detail with the balance sheet of the ompany as at 30th June, 1952, and the supporting statements which ave already been circulated among the shareholders. The Directors' eport printed with these accounts, sets out the usual detailed in- ormation relating to the profits earned and appropriations there- rom for taxation, dividends and amounts carried forward. As de- ailed therein, your Directors recommend, in addition to the final ividend on preference capital at the rate of 5% per annum for he half-year ended June 30, 1952, a dividend at the rate of 5% per annum on the 120,000 ordinary shares of £1 each and on the 10,000 "A" class employees' shares of £1 each. The 5% Cumulative Preference dividend to 31st December, 1951, has already been paid.

Staff.

In conclusion, I wish to thank my co-Directors and all members of the staff of this company and its subsidiary and asociated companies for their loyal efforts, without which the results, as reported, would not have been possible in such difficult times.

Beacon Investment Ltd.

eg. Office: 368 Collins St., Melb. 'Phone: MU 9274. Directors: J. R. G. McKenzie (Chairman), L. B. Evans, Herbert Taylor. Auditors: W. H. Tuckett & Sons.

16th Year ended December 31, 1952. Meeting March 3, 1953.

Profit was £595 lower at £8,480, due to smaller returns on ivestments, but dividend was maintained at 6½%.

In his address to the Annual Meeting of shareholders on March he Chairman, Mr. J. R. G. McKenzie, said:

As reported in the accounts, the income from dividends was htly less than the previous year, the difference being £481, or s than 5%. Considering the number of companies that failed ay any dividend during the year, and the large number that e reduced amounts, it will be evident to you that your com- 's results are satisfactory. Expenses were higher by £113, all ounted for by interest paid on borrowed funds.

Your Directors have declared a final dividend of 4% which, ther with the interim of 2½%, maintains the same rate as for previous year, viz., 6½%.

Investments.

During the year prices of stocks and shares quoted on the k Exchanges fell very heavily from the peak prices of the ious year. In December the market steadied, and since the ing this year has firmed very considerably, although it is not cted that prices will reach the inflated peaks of two years ago.

Our company's shares were valued conservatively at December nd showed a market value of £20,882 in excess of book value. he basis of book value at December 31, each 10/- share is orted by net assets to the value of 10/8, and on the basis of et value of our investments, each share has a backing in s of 12/5. I am sure you will agree that the company's posi- is sound.

Capital Increase.

Your Directors are gratified at the success of our recent new of 60,000 shares. It demonstrates public confidence in our any.

We assure our members that the new funds are being in- d with every care with the object of the members' protection to their advantage.

Economic Conditions.

Two years ago Australia experienced boom conditions, created rily by high prices received for wool and other primary pro- . Spending money was plentiful, and most companies were ting record business and profits. London funds were at an me peak, and many concerns entered into commitments for sion in the expectation of a continuance of the conditions then ruling. Mid-1951 conditions changed. Wool prices fell rapidly, and whilst national income was declining, spending was still at the accelerated rate, largely by reason of commitments already made. London funds were being depleted at a rate that became alarming.

The Government was forced to take action, and in March of last year introduced financial regulations to restrict imports and bank accommodation. These regulations were severe, and created difficulties for many traders. However, these measures have proved to be a blessing to our economy, as they have succeeded in achieving the hoped-for results to such extent as to warrant the Government easing them in some degree.

Current Trends.

I believe that basically our Australian economy is sound, and that business conditions will be improved to some extent this year. However, there are factors that are militating against building a well-balanced economy, all of which affect cost of production.

While there is a world shortage of foods and other primary products, there is little doubt that we can dispose of our surplus overseas. We had some market overseas for our processed foods, but cost of production is so high that we are priced out of those markets we had built up over the pre-war years. This is also the case in respect to many of our other manufactures suitable for export. Unless we export the products of our secondary industries, it will become uneconomic for many of them to operate for home consumption alone. Expansive building and equipment require large volume over which to spread the costs. Therefore, some of the objectives to lower costs so as to meet competition are higher efficiency through better management, greater output per man hour, creation of incentives, and less taxation and trade restrictions. This presents a challenge to management in industry and the Government of the day.

Staff.

During the year Mr. a'Beckett, through pressure of business, had to relinquish his post as Secretary of the Company. He is succeeded by Mr. Pearson. We extend to Mr. a'Beckett our thanks for the excellent service rendered the Company over a period of years, and welcome Mr. Pearson, who I feel sure will be a worthy successor.

484 traps in each 12" square tile reduces noise by 65%.

Rural Bank (Sydney) installed noise-absorbing Cane-ite Acousti-Tiles in their Billing Department without any interruption of office routine

Cane-ite Acousti-Tile are as easily installed over existing ceilings as in new construction. When noise has been excessive they are often continued part-way down the wall as seen in this photograph of one of the offices in the Rural Bank which now enjoy Acousti-Tile quiet.

You will find Cane-ite Acousti-Tile in many other banks and Government offices, churches, clubs, broadcasting stations, hotel bars and telephone booths throughout Australia.

As sound waves hit the tiles they are absorbed by the 484 noise traps in each tile—they dissipate instantly.

QUICKLY INSTALLED — NO INTERRUPTION OF BUSINESS!

The Chairman, Mr. W. E. Cooper, in addressing shareholders at the Annual Meeting on March 23, said:—

You will, I have no doubt, have perused the result of the Year's trading with interest, and will share with the Directors the satisfaction they feel at the result of the year's operations. The figures are the more satisfactory when it is remembered that the whole of the period of a slight recession experienced last year is covered by the figures. March to October was undoubtedly the worst period, and even though this six months of any year represents your Company's main period of good trading, we were able to cross the period successfully, and, indeed, to improve on last year's result. Immediately the import restrictions were imposed, action was taken to safeguard stocks on hand and apportion the manufacturing to the anticipated new conditions. However, as soon as the effect of the restrictions could be gauged with certainty full production was again possible, and no time was lost in stepping up supplies accordingly. No increases were made during the year, your Directors being confident that all such increases could be carried by the Company successfully.

Taxation

However, it may be worthy of record at such a time as this to inform you that, were taxation imposts normal, or even considerate, the prices charged could be reduced considerably. Maybe, the cost of living in Australia could be reversed and business generally placed on a new basis if the treasurer of the day would take a realistic view of the true position now operating in Australia. Perhaps this condition may be more fully appreciated when I tell you that we have a capital of £105,000, that last year we paid approximately £40,000 in salaries and wages, we paid to shareholders the amount of £24,250, and to the Commonwealth Treasurer we paid, in all, taxes to an amount exceeding a quarter of a million pounds. Of course, there must be a limit to this excessive, almost confiscatory, taxation, and after all, it is the general population of the country, the consumer of goods, who always has to pay the piper. So long as Government largesse remains the incentive of political parties as election propaganda, just so long will the difficulties confronting Australia at the present time, continue.

Import Restrictions

You will remember our last meeting was held in the shadow of the import restrictions just then announced, and the outlook at that moment appeared very dark indeed. However, the industry made an approach to the relevant Department some time later and following representation made, the Department took a more lenient view and made concessions which at once solved our immediate difficulties, and prevented the necessity for slowing down production. At the meeting held in Sydney, the industry felt that the operation of the restrictions would be harsh if carried on as set out in the regulations and the immediate reply given to us showed that the Administrative Officers of the Department could so handle an injustice as to eliminate it immediately and make the corrective adjustment without any inconvenience to all concerned. I give unstinted praise to the then Comptroller of Customs, Mr. Turner, and his immediate administrative officers who so ably understood the difficulties which had been created and so readily solved them.

Machinery & Plant

We are maintaining our plant in a state of good efficiency and each year we add to the machines in operation any new ideas that may speed up production and at the same time keep wages relative. You will, I am sure, appreciate this aspect of our management when I tell you our wages to production in 1941 was 19.2% when the basic wage was £4/13/0 and today with the basic wage in the industry £12/7/0 our wages to production is 15.8%. It is, of course, a fact our production has risen and prices are higher, but we believe the record disclosed is good, and is reflected in our annual figures.

As you will have read in your printed Statement of Accounts we are now firmly established in three States and the potential sales in South Australia and New South Wales are enormous. Victoria has always been very well serviced by our van delivery system and as we extend our service in other States, our sales will grow accordingly. With freights by land or sea at the all time present high, we are able to deliver goods in N.S.W. and S.A. at the Victorian Sales price list, thus saving from 1d. to 2d. per lb. on our goods to be sold outside Victoria, and this saving accounts very largely for our consistent good profits in all three factories. Moreover, the factories in other States are directed from Melbourne by frequent periodical visits and are not required to carry a normal management overhead, again a very big consideration in these days of high prices.

We do feel the maximum has been reached in the price spiral for confectionery, and that, by various means, we shall have to maintain our profits by efficiency and careful administration. To these ideals we are constantly giving attention, and with good results, as you will have noticed if you have studied your Profit

(Continued on next page)

HOADLEY'S CHOCOLATES LTD. (Contd.)—

and Loss Account. You will have noticed that notwithstanding continual increases in costs we have actually, apart, of course, from provision for Income Tax, reduced our expenses over the past year.

Buildings

Our buildings are, of course, maintained in good order, and you will see the Balance Sheet figure is £57,668 representing the written down value as disclosed in our annual accounts. However, when we know that recent valuations, made at your Directors' request by independent valuers, show the present day valuations at an aggregate of £163,000, and this figure has no vacant possession value added to it, you will understand more fully the financial strength of the Balance Sheet as shown.

The demand for our productions remains good, indeed, during the slight recession last year, we maintained a full complement of employees, and had a record last quarter. We are just at the moment releasing what is probably the most spectacular advance in packing ever experienced in the trade, and as you leave the meeting, you will be given a sample of our new idea. This is not to be a "stunt" pack, but a normal standard ½ lb. box to sell to the public at a standard ½ lb. price, and we feel we have reason to be proud that your Company is the leader of the industry in making this delightful pack available to the public at no greater price than the usual cardboard box. It takes months of preliminary effort to produce a pack such as this but we feel the results will be well worth while.

Stocks

From year to year, the question of our stocks on hand is always referred to in passing, and again I would like to draw your attention to the fact that with more or less normal conditions developing, your Directors have lost no time in reducing the heavy stocks hitherto carried to safer limits. We shall probably be able to still further reduce our stocks and make the overall financial position still easier, but above all, any liability for a risk in fluctuations of values is now extinguished, and we can buy according to requirements and price, rises and falls are of no great consequence to the overall position.

Subsidiary

I have already referred to our Companies in Sydney and Adelaide, particularly as regard to sales and distribution potential, and I would just like to tell a little about these units. They are both operating entirely apart from the parent Company, and both are making a complete success of the job in the respective States. Both are financially independent of Melbourne also, and gradually each will become as solid a unit as the parent Company is today. When it is considered that these units have been started, and set into operation without any extra capital, and with little or no bank accommodation, you must feel very happy indeed, as the figures come out and each year a good result is shown.

A continual improvement in sales turnover and a result such as you have before you can only materialise after a huge amount of effort. Once again, we, as Directors of the Company, desire to acknowledge the untiring interest shown by all employees who have, by their efforts, produced this result. In all States the difficulties as they arise are overcome and we would be lacking in our duty to you if we did not acknowledge our gratitude to them. After all, only a team, activated by team spirit, can produce good efforts, we have both the team and the spirit and we are indeed thankful for both.

To all employees, therefore, both office and factory, in Melbourne, Sydney, and Adelaide, I say thank you for a job well done.

Conclusion

In conclusion, and as I have usually done, I would like to tell you the now current year has opened up very well, we are nearly through our first quarter already, and January was an all time record for sales, February was excellent, and March, so far, leaves us with no worries, and so far as we can see ahead, we feel we can forecast a satisfactory year's operations this year.

TRUST ESTATES
AND TAXATION

"Trustee Investments"

"A good deal has been said of recent years concerning the necessity of widening the scope of investments in which Trustees may invest trust funds, and it is timely therefore to examine the existing powers of Trustees." (Extract from the Equity Bulletin, June, 1952).

On request, we shall be pleased to place your name on our mailing list for this and succeeding informative Equity Bulletins.

Dividends	Nil	1,333		
Reserves and undiv. profits	3,019	2,611		

*Adjusted figures from prospectus dated February, 1951.
†Adjusted for £693 taxn. underprovn.

Incorporated in 1951, the company acquired the 17-year-old business of John Todd & Co., manufacturers of bedding and wire mattresses. Factory is in Church Street, Richmond.

During the year the company felt the recession in the furniture trade. Stocks and overdraft rose, but are now being reduced, and better results are expected.

DEPRECIATION

Every business provides for the depreciation of its plant.

The future of the men who do the work should also be safeguarded.

EVERY well-managed Business makes provision for the year to year depreciation of both machinery and buildings so that they may be replaced at the end of their lives.

Of far more importance than the machinery and plant are the men who run it. Their future needs to be safeguarded too, and the best way to do that is for the Employer to institute a Staff Superannuation Fund.

The strength of the A.M.P. is a guarantee that the Superannuation Fund will be well managed and will provide for the future financial welfare of employees and their dependents.

The Society will be glad to send an experienced Representative to explain how the Society can assist you.

The organisation's major activity is the production of hosiery. Maximum output of women's hosiery was maintained throughout the year. The production of socks was reduced to 80% of capacity for the first half of the year, but returned to normal from July.

As a result of the precipitous fall in wool prices and the flood of imports, trade in textiles was almost halted early in 1952. As liquidity was restored, demand improved.

The company operates two subsidiaries—Holeproof N.S.W. Ltd. and Holeproof Apparel Ltd.

In addressing shareholders at the Annual Meeting held on March 31, the Chairman, Sir Julius Bruche, said:—

The Holeproof Group

The three operating companies are Holeproof Ltd., Holeproof (N.S.W.) Ltd. and Holeproof Apparel Ltd. The parent company—Holeproof Ltd. holds all ordinary shares of the Apparel Coy., and two-thirds of the ordinary shares of Holeproof (N.S.W.). The remaining one-third of the N.S.W. Coy's ordinary shares and the preference shares of both subsidiary companies are held by 1,600 individual shareholders. Holders of the parent coy. shares number 2,800.

The parent and the N.S.W. Coy. manufacture men's and women's hosiery—their output is one-fifth of the Australian production. Holeproof Apparel operates both in Melbourne and Sydney; it produces rainwear, shirts, men's neckwear, PTU's, pyjamas and sportswear.

The group employs 2,000 persons, assets total over £3 million and shareholders' funds are more than £1½ million.

Trading Conditions

At the last annual meeting, reference was made to the economic conditions which have caused a marked slackening of trade. These conditions persisted though with lessening severity even into the second half of 1952. Buying of many types of merchandise was almost halted because of the flood of imported goods and excess stocks held by wholesalers and retailers. Although import restrictions were imposed primarily to conserve rapidly diminishing overseas funds these provided relief while stocks were being reduced.

As liquidity was restored local buying resumed, and in the three months prior to Christmas we were unable to meet the demands for some of our products. Maximum output of women's hosiery was maintained throughout the year. In the first half production of socks was reduced to 80% of plant capacity but from July onwards the normal shifts were worked.

There is a tendency on the part of some manufacturers and retailers to blame the government of the day for adverse trading conditions. On our part we can only praise the present Federal Government and its administrative officers for the material help and guidance to the industry in the past 18 months.

Earnings and Finance

Considering the difficulties of 1952, the directors feel that satisfactory results have been attained. Profit of the parent coy. although less than the all-time record reached in 1951 was such as to enable the Board to recommend an ordinary dividend of 8% for the year. The balance of the year's earnings plus part of the profit brought forward from previous years has been used to

rengthen reserves by £50,000. Reserves now equal 42% of issued pital. Liquid financial position was improved, the surplus of rrent assets over the total of current liabilities and provision be- £36,000 greater than last year. Stocks were £78,000 lower (total oup stocks were reduced by £200,000) and are valued at the lower cost or the current market price. The overdraft of £64,000 at e beginning of the year was converted to a holding of £72,000 cash bank at the year end (total group overdraft was reduced by 3,000).

The more recently formed subsidiaries naturally were not as ll equipped as the parent company to meet the adverse condi- ns, and earnings of both these were severely affected. Improved sults are expected of the N.S.W. Coy. this financial year; the parel Coy. will need longer to recover.

Products

Twelve months ago we announced "Zealon" the marriage of ol and new man-made fibres. One great virtue of "Zealons" is e amazing resistance to wear, eliminating the need of darning. ese socks are now sold everywhere in Australia. The newest mber of the family "Wizard" is described and illustrated in the nual report which illustrates also women's hosiery with the latest loured seams and heels, "Peak of Perfection" shirts, ties, and one rle from the extensive rainwear range.

Distribution

Distribution, to be efficient, has to cover the whole of Australia d stores large and small. Sales to the major stores are made the companies' sales staff; other accounts numbering many usands to which go a considerable part of the sales volume e serviced by Australia's largest distributors D. & W. Murray d their affiliated house of Goode Durrant & Murray in South and st Australia. Distribution in North Queensland is provided in dition by Hollis Hopkins with headquarters at Townsville.

The Murray group have warehouses in each capital city. Hole- oof products are shipped in bulk to these strategic points; from m, day to day deliveries can be given to stores. This service s proved efficient and is much better than any we could provide the same cost.

The distributing arrangements between Holeproof and Murrays ve been active for more than 20 years and are so important to th groups that a still closer association is being discussed be- een the directors of the companies.

Buildings

Greater availability of labour has enabled concentration of nufacturing at the major mills. In Victoria with the production women's hosiery centralised at Brunswick, and the other three in mills, Deepdene, Box Hill and Ringwood situated in close ximity to each other along the main eastern highway, economy s been achieved in transportation and supervision. The Heidelberg t and vacant land held in this area have been sold. To make greater permanency, a large store located close to the Brunswick ll and which has been held under lease for some time was pur- ased. Certain additions and extensions have been made to the ildings at Brunswick, Box Hill and Ringwood to provide for the nsolidation at these mills.

In New South Wales, similar concentration of hosiery activities have been effected at Rydalmere which has been adopted as the focal point, with apparel manufacturing at West Ryde only three miles away. Within the last several weeks the Leichhardt property has been sold, and later in the year warehouse operations at Glebe will be transferred.

All properties sold realised more than cost. Some of these sales have been made since the end of the year and consequently are not included in the accounts.

Plant

Plant installed by your company during 1952 included new knitting machines for both men's and women's hosiery, and equipment to improve and reduce the cost of finishing processes. The company has kept pace with improvements by constant replacement and modernisation.

Most of our hosiery plant is of British origin except full fashioned knitting machines which are manufactured in U.S.A., the only country producing the high speed full fashioned machines so necessary for lower costs.

Share Prices

The market prices of the coy's preference shares have moved downward in common with similar investments, due mainly to the higher interest rates now offered on Government and semi-Government loan issues. The drop in market prices has in no degree lessened the security of capital and dividend which is provided for holders of the company's shares.

The security is:—

	As to capital	As to dividends	
	Assets supporting each £1 share.	No. of times dividend is covered by the earnings for the year.	No. of years dividends provided by unappropriated profits and pref. div. reserve.
Holeproof Ltd.			
A 8% Pref. shares	£45 19 0	38 times	5 years
B 6% Pref. shares	£24 17 0	27 times	
C 5% Pref. shares	£3 17 0	5 times	

The Future

The forces set in motion by the revolutionary changes of last year may not be halted quickly; effects will be felt in the current year and in the years to come. In meeting the challenge of 1952 conditions re-adjustments have been many, but in a large organisation this makes for increased vitality and keenness in management. Benefits have been gained, and your company is well equipped and in a sound position for the future.

For the time being at least, is gone the discontent and unrest in industry so prevalent in recent years. There is not the tendency for persons to be ever changing their jobs with the consequent need for continuous training of a new team. Staff and executive alike have settled down and responded well with greater attention to the task—higher output and increased efficiency.

24th Year ended September 30, 1952. Meeting March 12, 1953.

Group sales rose by 20% to £25.8 million, but declined during the last quarter, due to reduced demand. Consolidated profits after payment of preference dividends were £320,000 lower at £1,090,164, returning 11% on ordinary capital (17% last year). Ordinary dividend was maintained at 7%. Paid capital rose by £1,290,000, and a further £2.9 million was raised by debentures.

Stocks rose by £4 million and overdraft by £1.4 million. Owing to reduction of stock levels by consumers, some minor plants were closed for several months. As detailed in the Chairman's Report, the supply of materials is now better.

Products of the company and of its fourteen subsidiaries fall under the following main headings—

Nobel Group—Explosives, sporting ammunition and slide fasteners.

Chemical Group—A wide range of industrial and agricultural chemicals, drugs, etc., caters for the needs of many important and diversified industries.

Alkali and Phosphate Group—Soda ash, caustic soda, bicarbonate of soda, calcium chloride, also food phosphate, detergent phosphates, etc.

Dyes and Plastics Group—Textile, automotive, plastics, paint and many other industries are dependent upon supplies from this group.

"Raw materials and other supplies have during the past year become available in greater quantities, but at the same time the general demand for all goods has fallen off, and at some of our factories it has been necessary to reduce the volume of production," said the Chairman, Dr. F. T. Meehan, at the Annual Meeting held on March 12. His address reads:

Trade and Profits.

The year under review has seen a marked change in the general aspect of the Australian economy. The general prosperity and the many expansion schemes of 1951 were followed in 1952 by a setback emphasised by the imposition of import restrictions, and the period of consolidation that followed is still continuing. Your Directors have been keenly alive to these changing conditions, and every effort has been made to adapt Company programmes to them.

Sales for the year reached a new high level at £25,846,000, but their monthly rate declined in the latter part of the year, and current figures indicate that the high rate of increase of recent years will not be maintained.

The net profit for the year was £995,253 after providing for taxation and depreciation. A comparison of profits, appropriations and capital funds is given in a ten-year financial statistical record in the annual report. A study of this reveals the very considerable development of ICIANZ over the past ten years. Although the profit figure for 1952 shows a decline from the record figure of 1951, special factors must be borne in mind in making a comparison. These factors are additional to the incidence of rising wage rates and costs of materials and services. In 1952, no taxation allowance was available to ICIANZ for the 40% initial depreciation on new plant. In 1951, this amounted to £110,000 and was the subject of a special appropriation from profits. A second major item in 1951 was the £56,100 dividend declared by a subsidiary company and taken up as part of profits, but subsequently rescinded and written back in 1952. If allowance is made for these items the comparative 1951 profit figure is £1,096,000 or £100,000 above the 1952 profit which was struck after specially reducing the values of certain stocks by £200,118. Reference is made to this matter in the report of the Managing Director, and therein also is pointed out that valuation of stock for balance sheet purposes has been given careful consideration. To date in the current financial year the values applied have proved conservative, and sales realisations together with the retarded buying rate have already resulted in a considerable reduction in stocks.

The satisfactory results achieved in a difficult period have been in part made possible by the diversity of our products and the wide variety of their users. The main ones are set out in a table in the annual report for your information.

Appropriations to Reserves.

Your directors have seen fit to retain out of profits £212,500 or reserves within the company. Of this sum, £100,000 has been laced to general reserve to bring it up to a total of £1,500,000. hareholders' funds have also been augmented by £393,750, the ll amount of the premium of 2/6 per share received from the eptember, 1952, issue of 3,150,000 ordinary shares. From profits ere has also been appropriated £72,280 to write off the expenses f this share issue and the issue in May, 1952, of £3,000,000 of ebentures.

Dividends.

After providing for the above and paying the 5% preference vidend which takes £50,000, your directors have pleasure in re-ommending, in addition to the interim dividend of 2½% already aid, a final dividend of 4½%, making a total of 7% for the year ordinary shares. This maintains the rate of 7% paid last year. ubject to the approval of this meeting, payment of this final vidend will be made on March 26, 1953. It was provided in the nditions of issue of the 3,150,000 ordinary shares issued in Sep-mber, 1952, that shares of the 1952 issue would not participate in is dividend payment.

New Debenture and Share Issues.

The need to augment our financial resources was indicated to u a year ago. Cash was required for working capital, as well to finance new extensions to plants and building. Our needs ve been met by the issue in May, 1952, of 4½% debentures to the lue of £3,000,000 with a currency of twenty years, redeemable ter 15 years at the Company's option, and by the issue in Sep-mber, 1952, of 3,150,000 ordinary shares of £1 each at a premium 2/6 per share. Both issues were successfully completed.

Funds thus acquired made it possible not only to finance the avy increases in stocks that occurred in the year under review, t also to continue various schemes of expansion. The change in nomic conditions made it necessary to amend these somewhat d to be selective as to projects to be expedited or delayed. In se matters the company's forward programme is constantly der review.

Increase of Authorised Capital.

As pointed out in the report of the directors, you will be asked this meeting to pass a resolution increasing the authorised ital of ICIANZ to £25,000,000. This is being done because issued capital is relatively close to the present authorised ital of £15 million. I would emphasise that this is a formal p and that the board has no present intention of issuing any t of this new authorised capital.

Organisation and Personnel.

The diversity of our products and the need for our factories be situated in various States adjacent to supplies of essential materials sets management special problems. For some years the scheme of organisation outlined in the annual report has been operating very satisfactorily. Operational groups and functional controls are responsible to the General Managers and the Managing Director. The groups manufacture and sell, and provide technical service to their customers. Each one has a sales turnover of several million pounds which brings with it many attendant problems, in which service and assistance are provided by the functional controls. These attend to such matters as advertising and purchasing, development and research, industrial awards and pensions and finance.

It is a complex picture which the co-operation and team work of the 5,600 men and women of ICIANZ make to operate with considerable success as your concern.

Unity of relationships within the company is helped by the Provident and Pension Funds. These funds are contributed to by some 5,000 members as well as by the company which last year paid in £216,000. Investments are managed by special committees, the former under the chairmanship of Sir David Rivett. At September 30 last Provident Fund investments amounted to £733,195 while those of the Pension Fund totalled £1,367,005.

Rural Production.

The very real need to improve the productivity of the agricultural and pastoral industries receives beneficial assistance from ICIANZ Ltd., particularly in protecting products by control of pests, disease and weeds. The future of Australia and New Zealand must depend to a great extent on the improvement of rural production, and your company is in a position to supply products to assist. To further this, a laboratory will be erected and biological research in the agricultural and veterinary fields will be undertaken.

Future Prospects.

Raw materials and other supplies have during the past year become available in greater quantities, but at the same time the general demand for all goods has fallen off and at some of our factories it has been necessary to reduce the volume of production. ICIANZ factories in Australia are naturally operated under Australian wage rates and prices for local supplies and services such as power and transport. These have steadied recently, but are at cost levels that compare unfavourably with other countries. Some insulation is at present provided by current import restrictions which, if lifted, would expose many industries to the crippling competition of overseas manufacturers whose wage costs are lower and hours of work are longer than in Australia. While every effort is being made to reduce the incidence of these matters on the cost of ICIANZ products, your directors are faced with a very serious problem that is weighted further by the high rate of income tax on companies. Nevertheless, we are confident that ways will be found to surmount these obstacles and that ICIANZ will continue to go on serving the growing populations of Australia and New Zealand to the mutual benefit of these countries and our company.

Your directors appreciate the support they have received from all employees in the past year and are confident that the teamwork of managerial leadership backed by the loyal support of employees will continue to bring success to ICIANZ.

Conducting an old-established finance business with Australia-wide connections, the company provides finance (at the rate of £1.8 million a month) for goods bought under hire-purchase agreements, such as tractors and other farm equipment, industrial machinery, home labour-saving appliances and motor vehicles.

In 1950 the Company commenced an established overseas practice of issuing debenture stock in obtaining extra working capital. The original issue of £4 million comprised £1.5 million 3¼% short-term stock repayable at 90 days' notice and £2.5 million 4¼% long-term stock repayable 3 years after issue.

In October, 1952, the Company re-issued £1 million of 3¼% short-term stock redeemable either—

(a) 90 days from date of issue,
(b) on the expiration of 90 days' notice by either party, or
(c) at a fixed date in excess of 90 days from date of issue.

Higher interest rates are now offered for periods in excess of 180 days as set out in the Chairman's Address hereunder.

During the year debenture stock outstanding rose by £3 million to £7.5 million at balance date, representing a significant contribution to the development of a short-term money market in Australia.

Hire-purchase debtors were £3 million higher at £18.2 million and last year's bank overdraft of £104,491 was converted to a credit balance of £543,619.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 pref., £7/15/6; 5/- ord., 11/3.

At the Annual Meeting held on the 18th March, 1953, the Chairman, Mr. F. E. Bunny, delivered the following address:

The trading for the year, after providing £9,473 for depreciation and £645,000 for taxation, resulted in a net profit of £751,490 compared with £469,414 in the previous year. Profits in the subsidiary companies to June 30, 1952, amounted to £58,247, of which £11,200 was transferred to the parent company, making a total net profit for the year of £762,690.

Assets.

The amounts due and to mature under current hire purchase contracts increased during the year by £2,974,945 to £18,010,268. All these debts are secured by hire purchase agreements.

The Company's policy is to take into income account each year the charges as they are received. This accounts for the inclusion on the liabilities side of the balance-sheet of "Income Yet to Mature on Current Hire Purchase Contracts £2,217,892."

Reference to the comparative statistics in the printed Annual Report and Balance Sheet will indicate the progress made by the Company over the last four years.

Debenture Stock.

The progress referred to is due largely to the decision by your Board made in 1950 to replace substantial bank overdrafts by borrowing on the open market through the Stock Exchanges in Australia. This is in line with the procedure generally followed by the major overseas finance companies.

The Capital Issues Control have approved the issue of debenture stock up to the limit of £9,000,000 provided for under Trust Deed, and as at December 31, 1952, the amount outstan on debenture stock was £7,499,700.

Special reference should be made to our short term stock. introduction of 90-day short term stock through the Stock changes in Australia filled a gap in the investment market, we are pleased with the support received from the Stock Exch and its members.

We have now received Capital Issues Consent to amend conditions of our short-term debenture stock providing for v ing rates of interest according to the period of call. The conditions are:—

3¼% for a fixed period of 90 days or at 90 days call.
3½% for a fixed period of 180 days or at 180 days call.
3¾% for a fixed period of 270 days or at 270 days call.
4% for a fixed period of 360 days or at 360 days call.

The Stock Exchanges are being advised of these new terms rates. These conditions afford a greater measure of strength flexibility in the planning of the finances of the Company.

Cash at Banks.

It will be seen that on the balancing date there were credit balances at banks of £555,658. This credit ensures a li reservoir to take care of the rise and fall in the volume of b ness and as a cushion for the turnover in short-term stock.

Income Tax Reserve and Contingency Reserve.

The Directors decided to separate the Income Tax Reserve and he Contingency Loss Reserve, and the accounts now before you eflect this decision.

Ajax Insurance Company Limited.

Mention was made in the last report that the profits of our ubsidiary Company, Ajax Insurance Company Limited, showed a narked improvement for the six months ended December 31, 1951. his improvement was maintained, and the profits for Ajax Insurance Company Limited for the twelve months ended June 30, 952, were £105,670.

I am pleased to be able to say that this improvement has been naintained for the six months ended December 31, 1952.

General.

It is the Company's useful function to assist industry by providing consumer credit for the purchase of durable goods, thus contributing to the even flow of production and sale of such goods.

With the amount of business offering, it is expected that the Company's funds will be fully employed in the forthcoming year.

I wish to record the Company's appreciation of the co-operation extended to it by its bankers and trading banks in general.

Staff.

The Directors would like to pay a tribute to the loyalty and energy of executives and staff who have materially contributed to the gratifying results presented to you.

At the Annual Meeting on December 2, the Chairman, Mr. I. N. Holyman, delivered the following address:

The consolidated net profit for the year was £51,072 after providing £16,908 for depreciation on fixed assets and amortisation of forest areas, and £32,707 for taxation. This net profit of £51,072 is £2,746 greater than the net profit of Kilndried Hardwoods Limited and its subsidiaries for the previous year. After paying dividends at the rate of 5% on the preference shares and 12½% on the ordinary shares and placing £20,000 to general reserve account there is £36,959 to carry forward, compared with £33,887 brought in from Kilndried Hardwoods Limited and subsidiaries at July 1, 1951. On the paid-up capital of £260,000, this result is, in the opinion of your Directors, a highly satisfactory one.

During the year fixed assets increased from £79,773 to £135,525, made up as follows:

Buildings on leasehold	£3,808
Freehold Land and Buildings	5,043
Plant	15,277
Tractors	17,759
Motor Vehicles	13,865
	£55,752

The principal item of plant was the new Yates-American planing machine imported from Canada and installed in March last. Additional log hauling tractors and motor vehicles improved the productive capacity of the sawmilling section of the business.

Sawmilling.

The Company's subsidiaries operate sawmills at Launceston, Campbell Town, Oatlands, Tunbridge and Fingal, and each of these units has worked satisfactorily during the year.

Timber Processing.

The Company's kilns and dressing plants operated continuously during the year. The new Yates-American planer has increased the capacity of the planing mill and improved the quality of its production.

Sales.

The value of sales for the year was a record and was 40% greater than the previous year. Increased prices account for a portion of this increase.

General.

Since the close of the financial year production was curtailed at the mills in order to adjust stocks in line with the demand for timber which had slackened off due to the prevailing financial stringency which limited the amount of finance available to Government instrumentalities and private industry. In addition, Tasmania has experienced extremely wet weather which curtailed production still further. However, mills are now back to normal and good production is expected for the remainder of the financial year.

The full effect of the new planer will be felt early in the New Year when ample stocks of kiln-seasoned timber become available.

The demand for the Company's products continues to increase and will be met as far as possible by increased production of high quality. Opportunities are also developing for the export of our products.

I am pleased to advise shareholders that the Directors have been pleased to appoint Mr. Giles an associate director. The results of the year are in no small measure attributable to the energy, enthusiasm and ability of Mr. Giles. Your Directors have also appreciated the loyalty and work of the executive officers, the staff and all employees.

4th Year ended June 30, 1952. Meeting December 8, 1952.

Commercial production of vegetable parchment commenced April, 1952, and two further paper machines are scheduled operate in 1953, one for printing and writing papers and other for greaseproof.

Apart from its main project, the company owns a one-third rest in Ballarat Paper Mills Pty. Ltd., which produces art other coated papers.

An operating loss of £15,481 was experienced for the short od during which the parchment machine was in production.

The Tariff Board is reviewing the duty on paper, and it is ed to obtain adequate protection against the low prices railing overseas.

During the establishment period, holders of the £1 prefer- e shares have been receiving interest (in lieu of dividend) ½% per annum. Net tangible asset backing (book values) 3/11/7 for each £1 preference share, allowing for uncalled nary capital. Ordinary shares are not listed, being held Associated Pulp & Paper Mills Ltd.

The company owns a chain of subsidiaries controlling venteen major jam and fruit canning factories and numerous xiliary plants in Australia, New Zealand and South Africa.

There is a world demand for the company's canned fruit, d a record Australian pack was cleared. However, the spects for jam are causing anxiety, and with present sugar ces it appears that the export trade may be lost.

In order to reduce the overdraft of £652,000, the company making an issue of 300,000 ordinary shares on a basis of one re for six held on March 19, and a further 15,000 employees' res.

(Continued on next page)

K-M Steel Products Limited

"Production in all departments exceeded any previous year. We are actively expanding in every State and are developing our export trade," said the Chairman, Mr. W. H. Murphy, at the Annual Meeting on February 25. His address reads:

The financial position as disclosed in the balance sheet is very satisfactory. Trading profit for the year was £203,658 compared with £141,550 for the previous financial year. Provision for taxation for this year is £93,500 compared with £62 700 the previous year. The net profit is £110,150 as compared with £78,850 in the year ended June 30, 1951.

Current assets are shown at £423,035 as compared with current liabilities £312,748. Liquid assets comprising Government Loans and funds in our bank amount to £211,906. Our reserves now total £199,380 as compared with issued share capital of £370,000 of which £170,000 was a bonus issue. Total shareholders' funds therefore amount to £569,380.

Employee Relations.

Your Directors report excellent relations between management and labour. Efficiency payments made during the year to factory employees totalled £6,000. These payments are made on the basis of group efficiency, and all men in the factory division concerned participate equally.

During the year a further sum of £6,000 was placed to the credit of the Staff Benefit Fund which now reaches a total of £29,154. The whole of this amount is subscribed out of profits of the company and no contribution is required of the participants.

Production.

The K-M Rolling Mill has been in full production during the year and from billets supplied by Broken Hill Proprietary Co. Limited is producing the finest steel sections for the manufacture of steel windows. These sections have greatly assisted us in producing steel windows of the highest quality.

The sales for the half-year ended December 31, 1952, have been very satisfactory, and in the opinion of your Directors justify payment of an interim dividend at the same rate as in previous years.

Production in all departments exceeded any previous year in spite of the fact that considerable building alterations were effected and the complete reorganisation of plant layout was in progress. We are now in a position to meet increased orders throughout Australia. We are actively expanding in every State and are developing an export trade. Our policy is to produce the highest quality at the lowest price affording complete service to our customers. This policy has led to the ever-increasing demand for our products.

Crude Ore Treated—25,635 tons—assaying: 13.8% lead; 7.4 ozs. silver; 11.0% zinc.

Lead Concentrate Produced—4,847 tons—assaying: 70.6% (3,424 tons) lead; 36.0 ozs. (174,472 ozs.) silver; 5.5% zinc.

Zinc Concentrates Produced—4,786 tons—assaying: 0.8% lead; 1.7 ozs. silver; 50.8% (2,429 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/7/52 to 4/4/53), compared with the same period last year—

	Lead Concentrate. Lead.	Silver.	Zinc Concentrate. Zinc.
1952/53 (39 weeks)	34,260 tons	1,690,737 ozs.	24,582 tons
1951/52 (40 weeks)	32,567 tons	1,574,853 ozs.	23,247 tons

NEW BROKEN HILL CONSOLIDATED LTD.—

Fourteen weeks ended April 11, 1953.

Ore Treated—23,342 tons—assaying: 7.4% lead; 1.8 ozs. silver; 11.5% zinc.

Lead Concentrate Produced—2,131 tons—containing: 1,568 tons recoverable lead; 34,564 ozs. silver.

Zinc Concentrates Produced—4,883 tons—assaying: 51.5% (2,514 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/1/53 to 11/4/53), compared with the same period last year—

	Lead Concentrate. Lead.	Silver.	Zinc Concentrate. Zinc.
1953 (14 weeks)	6,461 tons	135,442 ozs.	10,024 tons
1952 (14 weeks)	4,090 tons	89,977 ozs.	6,499 tons

THE ZINC CORPORATION LTD.—

Fourteen weeks ended April 11, 1953.

Ore Treated—34,658 tons—assaying: 16.1% lead; 3.5 ozs. silver; 11.0% zinc.

Lead Concentrates Produced—7,039 tons—containing: 5,237 tons recoverable lead; 115,752 ozs. silver.

Zinc Concentrates Produced—6,567 tons—assaying: 52.5% (3,448 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/1/53 to 11/4/53), compared with the same period last year—

	Lead Concentrate. Lead.	Silver.	Zinc Concentrate. Zinc.
1953 (14 weeks)	18,093 tons	403,153 ozs.	13,065 tons
1952 (14 weeks)	12,290 tons	278,906 ozs.	10,349 tons

STOCK EXCHANGE BROADCASTS

The Australian Broadcasting Commission broadcasts a summary of the market, as supplied by The Stock Exchange, at the following times daily from Mondays to Fridays.

Medium Wave Broadcasts

1.23 p.m.: Through stations 3LO Melbourne, 2CO Albury, 3GI Sale, and 3WV Horsham.

5.10 p.m. (except Thursdays): Through stations 3AR Melbourne, 2CO Albury, 3GI Sale, and 3WV Horsham.

Short Wave Broadcasts

12.19 p.m.: Through station VLH15 on the 19 metre band.

1.23 p.m.: Through station VLR on the 31 metre band.

5.10 p.m.: Through station VLH15 on the 19 metre band.

WORMALD BROTHERS SYSTEMS—for protection against fire

As long as there is human carelessness there will be fires. You can't prevent fires. But you can prevent them from spreading and causing material damage — with Grinnell Protection.

Grinnell Automatic Sprinklers control a fire whenever and wherever it strikes, night or day, automatically, without fail. That's why Grinnell Protected buildings carry a rebate of up to 50% on Fire and Loss of Profits insurance premiums.

If your business or property is not Grinnell Protected today — you're carrying a grave risk. Why wait for fire to strike? Wormald Brothers' experienced engineers will help you plan protection for your specific risk.

A complete fire protection service is maintained by Wormald Brothers at all branches throughout Australia and New Zealand.

'Phone us and a representative will call.

NEW BROKEN HILL CONSOLIDATED LTD.—Net profit for the year ended December 31, 1952, was £558,020 sterling after providing £818,780 for depreciation and £260,760 for taxation. This compares with a net profit in 1951 of £619,024 after £178,000 for depreciation and £719,860 for taxation.

ROCKMAN'S SHOWROOMS LTD.—New branches are being opened at Chapel Street, Prahran, on May 1; Bondi Junction, New South Wales, in late May, and Yallourn as from July 1, this store having previously been operated by the State Electricity Commission. This brings total stores to 58.

Company Half-Yearly Reports

A. H. GIBSON INDUSTRIES LTD.—Trading conditions re-n difficult but profits are being made although on a re-ed scale. Half year's results reasonably satisfactory.

AMALGAMATED TEXTILES (AUST.) LTD.—31/3/53. ults satisfactory; due however, to increased production and the upward trend in wool prices, it is in shareholders' in-sts to conserve company's financial resources. Orders in d sufficient to maintain present production on a profitable is for some months ahead.

BLAIR ATHOL COAL AND TIMBER CO. LTD.—31/3/53. duction and profit were lower than the corresponding period last year. Demand for coal dropped considerably for some nths, but has shown improvement recently. Immediate future nand is uncertain.

BRADLEY BROS. LTD.—Although sales continue to be sfactory, directors have, due to increasing costs, decided reduce this year's interim dividend from 6¼% to 5%.

CONSOLIDATED TEXTILES LTD.—31/12/52. Industrial tile trading conditions, particularly in the southern states, e been extremely difficult. The group has applied to the iff Board for protection of cotton waste and meat wraps. ustrial clothing trade also extremely competitive, but turn-r steadily increasing. Profit for period at lower rate than vious year, and dividend deferred until end of year.

COOTE & JORGENSEN LTD.—31/12/52. Transfer from xandria to Fairfield now completed. Trade contracted late 1952 but sales now improving. Application made to Tariff rd for review of duties on goods manufactured by the com-y, no decision yet reached. No dividend to be paid at present.

CREAMOATA LTD.—31/3/53. Turnover increased compared h same period last year and manufacturing sections have n fully employed. Full production is expected to be main-ed to end of financial year. Trading results satisfactory.

FEDERAL HOTELS LTD.—31/12/52. Hotel Alexander chased in November last and renamed Savoy-Plaza. Two sidiaries have been formed—

West Collins Pty. Ltd., operating the licence for Hotel eral—notwithstanding increases in wage rates and food s, results show increased turnover and improved patronage. ults expected to at least equal record of last year.

avoy-Plaza Pty. Ltd.—took over licence and conduct of Hotel xander; remodelling and refurnishing proceeding. Profits ed in this section may not be available for distribution for teen months.

Vacant possession expected in near future of building ad-nt to Federal Hotel which was purchased from Australian ates Limited.

GROCERY & GENERAL MERCHANTS LTD.—Dividend on preference shares payable May 31, 1953 has been deferred.

JASON INVESTMENT CO. (AUST.) LTD.—31/3/53: Revenue lower than for the comparable period in 1952.

LAWSON & CARRINGTON LTD.—Sales and profits substantially in excess of corresponding period last year. Stock considerably lower and liquid position satisfactory. Property purchased in Croydon and store to be erected. Business purchased at Fitzroy has been modernised and will re-open shortly.

LAWTON INDUSTRIAL TRUCKS LTD.—31/12/52. Loss incurred for six months and adverse conditions which gave rise to such loss have persisted. No interim dividend to be paid.

THE MT. LYELL MINING & RAILWAY CO. LTD.—31/3/53: Directors have resolved to await figures for full year before deciding on payment of dividend.

NATHAN TRADING CO. LTD.—28/2/53. Results quite satisfactory; sales increased over same period last year and net profit maintained. Company hampered by inability to supply imported stocks and substantial relief from import restrictions eagerly awaited. Warehouse purchased in North Melbourne for grocery department and should result in expansion.

RIVERHART LTD.—31/3/53. Trading conditions difficult but profit earned. In last quarter trading improved and output increased steadily.

TINSLEY-LLOYD INVESTMENTS LTD.—31/12/52. Trading results quite satisfactory although showing decline in turnover on previous year.

TRANS-OTWAY LTD.—31/12/52. Operations show an improvement on last year although adverse weather and road conditions affected traffic. Costs have been reduced and anticipated that both passenger and freight operations will show a further improvement during the balance of the year.

V.I.A. LTD.—31/3/53. Difficult period experienced due to reduced demand for several main products. Other branches of the business stepped up and new products introduced, resulting in increased activity. No interim dividend to be paid on ordinary shares.

WHALE INDUSTRIES LTD.—30/4/53. During the off season all necessary maintenance of the company's factory and whale catchers has been completed. Whaling operations anticipated to start late May. There has been a slight improvement in the overseas whale oil market and a substantial proportion of the company's whale oil output for 1953 has been sold forward subject to production.

The consideration for the acquisition is the sum of £60,000 which will be satisfied by the issue to the shareholders in the Proprietary Company of 100,000 Ordinary Shares of 10/- each fully paid, and the payment of £10,000 in cash. Details regarding these transactions are contained later in this Prospectus under the heading "Additional Statutory Information." The Proprietary Company will become a wholly owned subsidiary of G. W. Green & Sons (Holdings) Limited and will c to function as the operating Company.

The proceeds of the issue will be used to provide the cas ment referred to above and additional finance for the Prop Company for expansion of that Company's operations.

REPORT BY MR. G. F. GREEN, CHAIRMAN OF DIREC OF G. W. GREEN & SONS PTY. LTD.

The following report by the Chairman was published Prospectus:—

The business now being acquired by G. W. Green & Sons ings) Ltd., was originally founded 63 years ago. My father, t Mr. George William Green, my brothers the late Mr. Harold Green and Mr. Alan Ronald Green and myself, purchased the b (then conducted in McKillop Street, Melbourne) and carried i partnership at that address under the firm name of G. W. G Sons until 1926, when the business was converted into a privat pany (G. W. Green & Sons Pty. Ltd.) formed by the mem the partnership and in which they held all the shares.

In the same year the business was moved to its present at 458 Lonsdale Street, Melbourne, where a modern brick of 20,000 sq. feet in floor area (later increased to 26,000 sq. fe been erected by the partnership to suit the particular r ments of its business. On the March 31, 1953, this factory w chased by the Proprietary Company.

The business has steadily progressed and has built up record of service with general and colour printing for a nur Melbourne's leading industrial houses, some of which hav exclusively with it for periods ranging from 30 to 50 years.

The steady growth of business of the Proprietary Comp indicated by the following index of value of sales computed basis that the turnover for 1948 = 100.

Year ended 30/6/1948	100
30/6/1949	105
30/6/1950	124
30/6/1951	127
30/6/1952	205
30/6/1953 (Forecast)	240

The upward trend is being maintained in the current fi year as evidenced by the fact that the value of sales figures eight months from July 1, 1952, to February 28, 1953. show crease of approximately 17½% over those for the same period preceding financial year.

The Proprietary Company is well equipped with premises a to-date plant which is in first class order and condition and highly trained and efficient staff to handle its business. The factory will meet all the requirements of the business for t five years or more.

In the report of the Investigating Accountants contained this Prospectus, the asset backing for each issued 10/- C Share, after this issue, is shown as 15/3. This is based o values of fixed assets, totalling £75,741. Independent valuation the value of these assets at £129,051/17/6 on which basis the asset support for each 10/- share would be increased to £1/1/

The valuations to which I refer (prepared for the purp inclusion in this Prospectus) are:—

Item	Book Value	Valuation	Date of Valuation	Valuer
Machinery, Plant, Type, Office Equipment and Motor Vehicles ..	£25,741	£71,226 17 6	10/2/53	Ernest M. Purdy of Purdy & Co. Pty. L
Factory property rear of 458 Lonsdale Street, Melbourne	£50,000	£57,825 0 0	15/4/53	A. McIntyre of Yeo C waite & Co.
	£75,741	£129,051 17 6		

The Directors are confident that expansion will go hand- with Australia's industrial growth and in view of the factors mentioned I am confident that the Directors will, in the ab national set-backs, be able to recommend continued divid Ordinary Shares at the rate of 8% per annum.

(The above Report was prepared for the purpose of in tion in this Prospectus.)

REPORT BY THE INVESTIGATING ACCOUNTANTS (Messrs. HANCOCK & WOODWARD)

You have informed us that a new Holding Company, G. W. Green Sons (Holdings) Limited, was incorporated in Victoria on April 1953, with an Authorised Capital of £250,000 divided into 500,000 linary Shares of 10/- each.

G. W. Green and Sons (Holdings) Limited proposes to acquire the ole of the Issued Capital of G. W. Green & Sons Proprietary nited, viz., £26,000 divided into—

2,000 7% Cumulative Preference Shares of £1 each fully paid	£2,000
23,580 Ordinary Shares of £1 each fully paid	23,580
420 "B" Ordinary Shares of £1 each fully paid	420
	£26,000

a total consideration of £60,000 which will be satisfied as follows:

(a) By the issue as fully paid of 100,000 Ordinary Shares of 10/- each	£50,000
(b) By cash	10,000
	£60,000

G. W. Green and Sons (Holdings) Limited also propose to issue to Public at par for cash 80,000 Ordinary Shares of 10/- each and you e informed us that you contemplate entering into an Underwriting reement in respect of this issue.

ID UP CAPITAL:

When these share transactions have been completed the Paid Up pital of G. W. Green and Sons (Holdings) Limited will be:—

100,000 Ordinary Shares of 10/- each issued as fully paid to the shareholders of G. W. Green and Sons Proprietary Limited in part payment for their shares in that Company	£50,000
80,000 Ordinary Shares of 10/- each fully paid to be issued to the Public at par for cash	40,000
	£90,000

You have requested us to prepare the requisite certificate for lusion in the Prospectus of the Public Issue and in accordance h your instructions we have investigated the Audited Accounts G. W. Green & Sons Proprietary Limited for the five years ended e 30, 1952, which is the latest date to which the accounts of this mpany have been prepared.

OFIT RESULTS:

The Net Profits of G. W. Green & Sons Proprietary Limited for five years ended June 30, 1952, are set out hereunder.

In compiling this table we have made such adjustments to the lared Net Profits as, in our opinion, are appropriate but no wance has been made for any additional profit which may be ned through the introduction of the proposed new Capital other n by way of saving of interest payments.

	Year ended June 30, 1948 £	1949 £	1950 £	1951 £	1952 £
justed Annual Net Profits f G. W. Green & Sons Proprietary Limited before roviding for Income Taxation	6,137	9,498	13,311	18,155	25,300
s Income Taxation at rates ow applicable to a Public ompany	2,262	3,774	5,490	7,670	10,885
ance available for Ordinry Dividends & Reserves	£3,875	£5,724	£7,821	£10,485	£14,415
rcentage of Balance availble for Ordinary Dividends nd Reserves to an Issued rdinary Capital of 90,000	4.31%	6.36%	8.69%	11.65%	16.01%

VIDENDS:

The rates of dividend declared by G. W. Green & Sons Proprietary nited in respect of the three years ended June 30, 1952, calculated a percentage of the Paid Up Capital at the dates of declaration stated as follows:—

	1950	1951	1952
Ordinary Shares	10%	10%	10%
7% Cumulative Preference Shares	7%	7%	7%
5% Redeemable Preference Shares	5%	5%	5%
"B" Ordinary Shares (created April 15, 1953)	—	—	—

All the above dividends were declared payable out of Tax Paid serves and were not subject to tax in the Shareholders' hands. No accounts have been made up and no dividends have been lared by G. W. Green and Sons (Holdings) Limited since the date incorporation.

NANCIAL POSITION:

A summary of the Adjusted Consolidated Statement of Liabilities l Assets of G. W. Green and Sons (Holdings) Limited and its sidiary Company is set out hereunder.

This Statement has been prepared as at June 30, 1952, to illuste the financial position that would have been disclosed at that e if—

(1) G. W. Green and Sons (Holdings) Limited had been incorporated at that date and the Capital transactions referred to above had been effected by that date.

(2) The following Capital variations by G. W. Green & Sons Proprietary Limited which have occurred subsequent to June 30, 1952, had been effected by that date.
  (a) The redemption of 22 5% Redeemable Preference Shares of £1 each fully paid.
  (b) The allotment of 420 "B" Ordinary Shares of £1 each fully paid in cash.
(3) The sale for £20,000, which occurred subsequent to June 30, 1952, of certain Freehold Property had occurred by that date.
(4) The sale for £20,000, which occurred subsequent to June 30, 1952, of an investment in another Company had occurred by that date.
(5) The purchase for £50,000, which occurred subsequent to June 30, 1952, of Factory Premises occupied by the Operating Company had occurred by that date.
(6) A Loan on Mortgage of £30,000, which is to be raised on the Factory Premises owned by the Operating Company had been raised by June 30, 1952.
(7) Dividends declared out of Tax Paid Reserves subsequent to June 30, 1952, amounting to £2,499, had been provided for by that date.
(8) Provision for Taxation had been adjusted to £10,500 to cover the Company's estimated liability on profits earned to June 30, 1952.
(9) Payment of the amount due to the partnership G. W. Green and Sons, viz., £2,000, had been brought into account.
(10) The proceeds of the issue to the Public for cash had been applied as follows:—

	£
(a) In payment of the cash portion of the consideration due to the Vendor Shareholders of G. W. Green & Sons Proprietary Limited	10,000
(b) In payment of Preliminary Expenses, Costs of Issue, etc., estimated at	3,000
(c) As increased Working Capital	27,000
	£40,000

Total Intangible Assets	5,850
	£218,190

NET TANGIBLE ASSETS COVER:

The Net Tangible Assets Cover for the Paid Up Capital based upon the above Consolidated Statement of Liabilities and Assets may be calculated as follows:—

Current Assets		£136,599
Fixed Assets		75,741
		212,340
Less Current Liabilities	£44,621	
Deferred Liability	30,000	
		74,621
Net Tangible Assets		£137,719

The Net Tangible Asset support for each 10/- fully paid Ordinary Share is therefore 15/3.

VERIFICATION OF ASSETS AND LIABILITIES:

Current Assets—£136,599—

The existence and values of Current Assets have been verified by us in the usual manner. We formed the opinion that the Trade Debtors Accounts were reasonable trade risks and we have inspected Inventories of Stocks on Hand and, in our opinion, the values adopted have been determined on satisfactory bases.

Fixed Assets—£75,741—

The individual items included in this group are commented upon as follows:—

Factory, Land and Buildings—at cost—£50,000—These premises were recently acquired by the Operating Company at a cost of £50,000. A registered Mortgage amounting to £30,000 and bearing interest at the rate of 5% per annum is to be executed in favour of the City Mutual Life Assurance Society Limited, 459 Collins Street, Melbourne.

A valuation made by A. McIntyre, Esq., Sworn Valuer, of 106 Queen Street, Melbourne, on April 15, 1953, and which was prepared for inclusion in this Prospectus values the above property at £57,825.

Plant and Machinery, Furniture and Fittings and Motor Vehicles —at cost less Depreciation—£25,741—The items included under this caption are included in the Operating Company's accounts at cost less depreciation.

Depreciation in respect of these assets has been charged in the accounts at rates comparable with those allowed by the Taxation Commissioner as deductions from the Taxable Income.

An independent valuation made by E. M. Purdy & Co. Proprietary Limited, 20 Queen Street, Melbourne, on February 10, 1953, and which was prepared for inclusion in this Prospectus, values the assets included under this caption at £71,226/17/6.

Current Liabilities—£44,621—

We have been assured that all the liabilities of the Company Group as at June 30, 1952, have been disclosed to us.

We have satisfied ourselves that the Provision for Taxati adequate to cover in full the liability of the Company Group on p earned to June 30, 1952, assuming that the Operating Com carries out its intention before April 30, 1953, to declare a divi out of the profits of the year ended June 30, 1952, which will be able to the new Holding Company and which will be sufficie avoid Undistributed Profits Tax in respect of that year.

Note: The net tangible asset support—15/3—shown in the a Report for each 10/- Ordinary Share is based on current and assets at June 30, 1952, at book values totalling £212,340.

Independent valuations made since that date of factory land buildings, plant and machinery, furniture and fittings and m vehicles place a value on these items of £129,051, compared with values of £75,741—an increase of £53,310, on which basis the tangible asset support would be increased from £137,719 (as indi in the Report) to £191,029, equal to £1/1/2 for each 10/- share.

DIVIDENDS:

These shares will rank for dividend equally with the s allotted to the vendors. The Directors propose to pay a divide 4% (4.8d. per share) for the period ending June 30, 1953, on all i shares, including the shares of this issue. Thereafter it is pro to pay dividends half-yearly.

The tax paid reserve of £24,484 (referred to in the report o Investigating Accountants earlier in this Prospectus) is ava for distribution by way of dividend to the shareholders in the ing Company and dividends paid out of this reserve will not be ject to income tax in the hands of the recipients.

It is expected, in the absence of abnormal trading condi that the Directors will be able to recommend dividends at a ra 8% per annum and such dividends will be paid wholly out o tax paid reserve until it is exhausted. The amount of this tax reserve is equal to approximately 27% on the capital of the pany after this issue of shares has been made.

STOCK EXCHANGE LISTING:

Application will be made as soon as practicable for quot of all issued shares of the Company on The Stock Exchange of bourne.

UNDERWRITING AND BROKERAGE:

The whole of the issue has been underwritten and taken fir Messrs. Ian Potter & Co., Members of The Stock Exchange of bourne for an underwriting commission of Fourpence half-penny share, out of which brokerage of One penny half-penny per will be paid to Members of recognised Stock Exchanges in Aus on any shares allotted in respect of applications lodged by them bearing their stamps. As the underwriting brokers have taken the whole of the issue no shares will be available for subscri by the general public.

(This statement of extracts from the prospectus of March 30, 1953 is for information only. The issue has closed.)

for a further twelve months on payment of £100. Purchase price £5,000 cash. This option is dated fifth February, 1953.

2. From John Charles Thomas, North Balwyn, Victoria, an option over Mineral Lease 7E of approximately 40 acres, known as the Peter Pan in the Warramunga Goldfield, Tennant Creek. Option for six months, renewable for a further twelve months on payment of £100. Purchase price £15,000. This option is dated fourth February, 1953.

3. From Andrew Thomas Rodgers, of Tennant Creek, an option over Gold Lease 117E of 20 acres known as the Big Ben, Warramunga Goldfield, Tennant Creek. Option for twelve months. Purchase price £7,000. This option is dated fourth February, 1953.

4. From Andrew Thomas Rodgers, of Tennant Creek, an option over Gold Lease 805, known as the Wheal Doria Gold Mine, Warramunga Goldfield, Tennant Creek. Option for twelve months. Purchase price £20,000. This option is dated fourth February, 1953.

5. From Robert George Alexander Reed, of Tennant Creek, an option over Prospecting Area 155E for Copper, Tennant Creek. Option for six months, renewable for a further six months on payment of £100. Purchase price £5,000. This option is dated fifth February, 1953.

6. From Constantine Perry, of Tennant Creek, an option over Gold Lease 72E, known as the Three-Thirty, in the Warramunga Goldfield, Tennant Creek. Option for six months, renewable for a further twelve months. Purchase price £2,000. This option is dated twenty-eighth February, 1953.

Exploration will be carried out at first by mapping and geological ysis, and will be followed where warranted by diamond drilling. Company will purchase two diamond drills and associated equip-t, and will employ competent drill crews whose services have ady been secured. It is estimated that with the funds in hand ill be possible to purchase all equipment necessary, carry out investigations desired, and complete approximately 10,000 feet rilling before it is necessary to call up more than the 2/- per e paid on allotment. This will take at least six months.

PROSPECTS:

The Options already secured by the Mines Investment Syndicate considered to be among the most promising on the Tennant k field and some of the outcrops have characteristics similar nose of the Australian Development (Noble's Nob) Mine and the Gold and Copper Mine, where rich values have been disclosed. One of the properties held under option is at present an operat-Gold Mine, being worked by the leaseholder privately. Current uction of ore has a value of about 3 oz. of gold per ton. Attention is drawn to the accompanying Reports by Dr. Garretty Mr. C. E. Blackett, which deal more fully with the Company's pects.

In addition to the Options already listed, the Company has other active properties in view, the exploration of which will be pro-ed with as opportunity offers.

It is the intention of the Company to form operating companies ork mineral leases where warranted. In such cases, this Com-'s interests will be transferred to the operating companies and tantial benefits should accrue to shareholders in this Company.

ort by Dr. M. D. Garretty, D.Sc., M.I.M.M., M.A.I.M.E., I.Aust.I.M.M., Consulting Mining Geologist, Melbourne.

The following report by Dr. M. D. Garretty dated February 27, published in the prospectus:—

The Tennant Creek field first received close attention in about . For several years, prospecting activities were assisted by the ation of the Commonwealth's Northern Australian Survey, which ied out geological mapping, geophysical surveying and diamond ing. Nevertheless, although the Eldorado Gold Mine has operated many years, and more recently the Noble's Nob Mine of the tralian Development Company has had a spectacular rise, and copper ore has been disclosed in the Peko Mine, the field gen-y has languished.

Until recently, the only metal sought at Tennant Creek has been . The gold has been mined from the shallow or oxidised sec-s of lodes which occur in shears and fracture zones. Com-ly, but not always, the lodes are closely associated with masses ronstone (hematite and sometimes magnetite), usually having picuous outcrops.

The geophysical work mentioned above was carried out to try nd additional concealed ironstone masses believed to be associated the gold ore. Drilling followed, and actually encountered the grade margin of the present Peko copper orebody.

The gold worked in the shallow mining activity which has so characterised the field has been derived from the oxidation of t were originally sulphide bearing lodes. Furthermore, many of lodes have been subjected to enrichment in gold near the sur-—a common process in the arid regions of Australia. Although evidence has been clear, it has not been generally appreciated he past that the rich gold ore commonly occurring near the sur-at Tennant Creek cannot be expected necessarily to continue nward into the unoxidised or sulphide zone, where there is ally a complete change in ore type. Too little consideration has n given to the fact that the massive ironstone outcrops which nd in the district are not, in detail, a guide to profitable ore. much speculation has been based in the past on an assumption the better the ironstone outcrop, the better the ore that could be ected beneath it. This generalisation perhaps has some merit so as true gossans are concerned, but is quite inapplicable to mixed rops of lode gossan and hematite ironstone. Furthermore, ough under climatic conditions and general circumstances applic-to the Tennant Creek field, gold ore can generally be expected to be poorer and perhaps unprofitable below the oxidised zone, there may be an attractive base metal content in some of them in the sulphide (or unoxidised) zone. The uncertain and erratic results which have been obtained in the oxidised zone in many mining prospects at Tennant Creek have in most instances not sufficiently encouraged the owners to continue work in depth. The usual practice has been to extract whatever rich gold ore has been evident at or near the surface, and to abandon the mine thereafter.

Study of the field has shown that although the hematite ironstone masses are commonly closely associated with gold occurrences, this is due partly to structural causes and partly to the fact that commonly there are better outcrops near the harder ironstone masses. The chance for finding gold occurrences in the intervening alluvium covered plains by time honoured prospecting methods is, of course, quite slim. Some of the ironstone outcrops in the Tennant Creek field are in fact gossans which indicate underlying lodes, but most of them are not. This distinction has not been drawn in the past by the majority of investigators, and the progress of the field thus has been considerably hampered.

The role of secondary enrichment in the existing shallow workings of various mines, and the possible existence of attractive gold or base metal orebodies in the as yet completely unexplored sulphide zone, were not generally appreciated until very recently, on the Tennant Creek field. The significance of small amounts of copper found in boring the Peko Mine by the Commonwealth's North Australian Survey fifteen years ago was not generally accepted until further attractive disclosures were made in that mine during the last couple of years.

Now that the whole story is being unfolded, it is evident that there is considerable scope in the Tennant Creek field for susbtantial exploration in depth of selected lode occurrences. The testing stands an excellent chance of disclosing attractive orebodies, if it is carried out with due consideration of the outcrops themselves. They should be evaluated by expert appraisal to determine which of them are true gossans, and what the gossan structures themselves indicate as to the probable nature of ore to be found in depth.

Options have been secured on behalf of Northern Mines Development covering a number of mining areas in the Tennant Creek field, judged to be worthy of further investigation. The procedure will be for a more careful study to be made of all of them, and of any others which may be acquired, so that their relative merit can be assessed and an order of priority in testing determined. It is proposed that testing will be carried out by diamond drilling. In general, the drilling will be designed to test not merely the oxidised zone, but the underlying sulphide and possibly secondarily enriched zones. The object is thus to form a foundation on which mining operations of appreciable longevity may be undertaken.

I consider that the programme of investigation and testing to be followed by Northern Mines Development N.L. is overdue, and has strong attractions. The Company will indeed be unfortunate if early success is not forthcoming. Promising properties have been secured in a district which has already produced two bonanzas (Noble's Nob and Peko), and the proposed drilling campaign will enable rapid and cheap testing to be carried out.

Report dated February 27 by Mr. C. E. Blackett, M.I.M.M., M.Aust.I.M.M., Consulting Mining Engineer, Melbourne.

(Prepared for inclusion in the Prospectus.)

The formation of the proposed Northern Mines Development Company to explore the potentialities of the Northern Territory mineral resources by meticulous geological guidance, and by diamond drilling, should, in my opinion, be of considerable value, and contribute largely to the further expansion of legitimate mining ventures in this highly mineralised area. At Tennant Creek there are working mines such as Noble's Nob, Peko, Eldorado and the Northern Star. In addition, there are numerous lode outcrops and prospects, and I believe that among them are many which fully deserve the testing at depth which Northern Mines Development N.L. proposes to carry out. The outlook for the Company is promising.

CONSIDERATION:

The Mines Investment Syndicate will transfer its Options to this Company immediately on incorporation free of loading, with the exception that the Syndicate will have the right to purchase for cash 100,000 of the Company's unissued 5/- shares at a price equal to the then paid-up value of the 500,000 shares already issued. This right cannot be exercised until eighteen months after registration of the Company or until the Company forms a subsidiary to develop and work one or more of its properties, whichever is the earlier.

STOCK EXCHANGE LISTING:

Application will be made as soon as practicable after allotment for the official quotation of the Company's shares on The Stock Exchanges of Melbourne and Adelaide.

UNDERWRITING AND BROKERAGE:

The whole of the issue has been underwritten and taken firm by Messrs. Leonard G. May and Marriott & Treloar, Members of The Stock Exchanges of Melbourne and Adelaide respectively, for a commission (including brokerage) of 1½d. per share out of which brokerage of 1d. per share will be paid to members of recognised Stock Exchanges of Australia upon all shares allotted in respect of applications lodged, bearing the stamp of such members.

ALLOTMENT:

The Directors reserve the right to allot such number of the shares as they deem fit up to the number applied for by each applicant, and also to reject any application.

For Information Only

(This statement of extracts from the prospectus of February 24, 1953, is for information only. The issue has closed.

Gippsland Industries Limited

(Incorporated under the Companies Act, 1938, of the State of Victoria on 28th May, 1952.)

PROSPECTUS

of an issue at par of 456,000 Ordinary Shares of 5/- each, payable in full on application.

AUTHORISED CAPITAL:
4,000,000 Ordinary Shares of 5/- each £1,000,000

ISSUED CAPITAL:

UNDERWRITING BROKERS TO THE ISSUE:

Messrs. PATRICK R. LEVY & ALLEN, 26 O'Connell Street, Sydney (Members of the Sydney Stock Exchange).

MELBOURNE BROKERS TO THE ISSUE:

Messrs. GUEST & BELL, 409 Collins Street, Melbourne (Members of the Melbourne Stock Exchange).

HISTORY AND OBJECTS OF THE COMPANY.

Early in 1951, Dr. Steven Gottlieb, who is a world renowned cement expert, approached Mainguard (Australia) Limited with a project for the manufacture of cement by a method not at present being used in Australia, and known as the modern vertical kiln process. By comparison with other methods, only a relatively small plant is required, and one of its features is that it can use local brown coal for fuel. After careful investigation of all aspects, including Dr. Gottlieb's background and qualications, Mainguard (Australia) Limited realised the possibilities for such a process in Australia and agreed to sponsor the project to the fullest extent. The present company, Gippsland Industries Limited, has been formed to establish the first of these vertical kiln plants at Traralgon in the Gippsland area of Victoria, where a large developmental programme is being carried out.

The State Government of Victoria were approached to assist in the development of this company, and have agreed to give it every possible support, particularly in view of the fact that the process can operate on Victorian brown coal or other slack fuels.

Arrangements have been made with the Rural Finance Corporation—which is guaranteed by the State Government of Victoria—for a loan of £100,000 to the operating company, viz., Gippsland Cement & Lime Co. Pty. Ltd., repayable by ten annual instalments of £10,000, plus interest, the first instalment to b on 30th June, 1955.

FINANCIAL STRUCTURE.

It has been estimated by Dr. Gottlieb that a sum of £2 is required to establish the company and its subsidiaries, has been decided to raise this sum initially. Mainguard (Aust Limited has guaranteed to find any additional sum which m found to be necessary to commence full production. The £2 will be raised partly by loan and partly by share capital.

MANAGEMENT.

The Managing Director of Gippsland Cement & Lime Co Ltd. is Dr. Steven Gottlieb, D.Sc., A.M.I.E. (Aust.), who is nationally recognised in the cement production field, and wh been associated with research in the modernisation of the ve kilns since 1929.

EXTRACTS FROM REPORT BY DR. STEVEN GOTTL Dr.Techn.Sc., A.M.I.E. (Aust.), 22nd January, 1953.

During the past five years the modern vertical kiln has p to be very successful in cement plants overseas, mainly o Continent of Europe. Vertical kilns are not new in the ma ture of cement, actually they were the first kilns used b industry, but these earlier kilns were later discarded as ob and replaced by rotary kilns. However, the new designs o tical kilns, using nodulised raw material feed which also in the fuel, are completely mechanised in operation. These produce high quality cement, and are very economical in consumption. A modern plant which started operation in Sv land in 1948, is using less than half the amount of fuel pe of cement production than the present average consumpti fuel in Australian cement plants.

The conditions in many parts of Australia, including th the Latrobe Valley, present ideal circumstances for the use modern mechanised vertical kiln.

DEVELOPMENT OF THE MECHANISED VERTICAL KILN

Recognising these limitations of the rotary kiln, I comm research, many years ago, in the improvement of the shaf in which the possibilities of efficient heat transfer were conceded to be better than in the rotary kiln, mainly due much larger material surface available for the transfer o and the higher velocities of the hot gases.

It was clear that, if centralised kiln control could be de for the shaft kiln, the size of the feed reduced, air-pressu creased, discharge from the kiln improved, a method of burning could be achieved which would have great adva over the rotary kiln method and be much more suitable in f able circumstances.

CONDITIONS IN GIPPSLAND.

The cement situation in Victoria, where present cemen duction is based upon high grade bituminous coal obtained outside the State, makes the establishment of a modern v kiln an attractive proposition. In the Latrobe Valley area centre at Traralgon, within 16 miles of the limestone depo a short distance from suitable local fuels, the establishm this proposed plant has particular attractions.

The plant as planned by me for this company incorporat proved methods of handling the materials together with the efficient new kiln and nodulising method, all associated wit tralised control and labour economy.

he bulk of the plant is being manufactured and supplied by ng engineering companies in Europe, and in the case of all alised equipment, by old established and highly reputable facturers who have been actively associated with the de- ment of the modern vertical kiln process in recent years. e auxiliary equipment is being made in Australia, this is be- upplied in every instance by manufacturers of the highest ing.

n my opinion all the figures quoted in this Prospectus in ction with the plant design and the expected operation in lgon are eminently fair and reasonable, and the indicated s are capable of achievement.

S. GOTTLIEB, D.Sc., A.M.I.E. (Aust.).

he above Report was prepared for inclusion in this Pros- s.

GIPPSLAND INDUSTRIES LIMITED.

ippsland Industries Limited will introduce to Australia the rn vertical kiln method of manufacture. This method has been for several years in Europe and elsewhere overseas, and after stive tests is recognised as one of the most efficient methods ment manufacture.

ADVANTAGES OF VERTICAL KILN METHOD OF CEMENT MANUFACTURE.

he following are some of the principal advantages of the new od compared with existing methods now being used in Aus-

uel.—An important feature is its ability to operate efficiently cheap brown coal, coke or coal screenings including dust of ½ in. sizes, or other slack fuels which were hitherto re- d as waste materials, and which are readily available in ria. While present cement plants in Australia are using 3,000 00 B.T.U. (British Thermal Units) to produce one pound of nt, the modern vertical kiln can operate on a fuel consump- of 1,700 to 2,000 B.T.U. Further, the high-grade bituminous which are necessary in other methods, are not essential to ertical process, as the low-grade coals which are more abund- nd more easily available, can be used effectively.

Decentralisation.—The vertical kiln process can be operated nically on a relatively small basis and complete units can fore be placed strategically in other suitable areas in Aus-

Economy of Establishment.—The small vertical cement plant res far less steel. Thus smaller and less costly foundations equired, and time of erection is cut down. Based on his over- experience, Dr. Gottlieb estimates that the company can be lished and operate efficiently on the basis of a total outlay 75,000, for a guaranteed minimum output of 35,000 tons per However, output can be raised up to 55,000 tons, depending cal conditions. The total outlay of less than £9 per ton of al capacity, compares very favourably with the figure of ximately £15 per ton given by the Department of Industrial lopment in its Review of the Cement Industry in May, 1951, he present cost of establishing a Cement Works." (These he latest official figures available.)

he design of the company's cement plant involves one com- kiln unit, one raw material and one cement grinding mill with uxiliaries, and a packing plant. Most of the plant and equip- necessary can be purchased in the sterling area, either in nd, West Germany, or locally. However, the delivery on cer- items varies, so that in order that operation may commence 53, orders have already been placed for those on which there e greatest delay. These include the three principal units, viz., nt mill, kiln plant and raw material mill.

t the date of this Prospectus foundations for the buildings been laid on the site and several of the buildings have been leted. The kiln plant and cement mill have arrived, and the plant is already partly erected. Orders are being placed for alance of the equipment, machine tools, motors, etc., in accord- with the overall plans, so that erection can proceed without as each unit arrives. The whole of the ordering, checking, ion and final operation of the plant is being supervised by Dr. ttlieb.

Economy of Operation.—As compared with the standard rotary the mechanised vertical kiln is much cheaper to operate. There coal grinding installation, and labour requirement is low. space required for the plant is small; for example, two vertical with an annual output of 70,000 tons would occupy an area 0 sq. ft. as compared with the area of 5,000 sq. ft. required rotary kiln of the same capacity. The modern vertical kiln xible in operation and can be stopped under fire without any ge to the kiln shell, firebrick lining or other parts of the ment. The operation of a modern vertical kiln plant need e continuous, as the kilns can be stopped over weekends and ys, avoiding labour problems.

Limestone.—This is one of the main ingredients of cement and hole of the company's requirements will be available through alf-owned subsidiary company, Tyers Quarrying Company ietary Limited.

Clay.—This other principal ingredient is to be found in ample ities on the factory site.

Gypsum.—The relatively small amount of gypsum used can be ed from either Victorian or South Australian sources, and y is assured.

Distribution.—Traralgon is situated on the main eastern rail- from Melbourne to Orbost, and on Princes Highway. Easy to other parts of Victoria and interstate is therefore assured. ver, it is anticipated that the bulk of the output of the fac- will be absorbed locally in the Latrobe Valley region, where sive development is taking place, particularly in Traralgon and the nearby towns of Morwell and Yallourn. Transport will therefore be kept to a minimum.

Quality of Cement.—The modern vertical kiln produces cement of the highest quality in full conformity with standard specifications, with the additional advantage of elimination of alkalies, which is not possible in rotary kiln operation.

CAPITAL OUTLAY.

The following table sets out how it is intended to use the amount of £275,000, which is the initial sum being raised by Loan and Share Issue.

GIPPSLAND CEMENT & LIME CO. PTY. LTD.

1. Purchase of land (£7,411 plus costs)	£7,500
2. Raw material drying and grinding mill with separator and furnace; clinker, coal and raw material stores, discharge hoppers and conveyors, mobile crane for general handling	52,500
3. Raw meal and cement silos with fluidising equipment and other auxiliaries, screw conveyors, elevators and transport equipment	29,000
4. Kiln plant complete and auxiliary equipment, building and cement mill complete	76,000
5. All other buildings, gypsum crusher, hoppers, bagging plant and store, electric motors and equipment, office and laboratory buildings and equipment, workshops and amenities	48,000
	£213,000

TYERS QUARRYING COMPANY PROPRIETARY LIMITED.

1. Cash payment included in purchase consideration for half interest in quarry and its present equipment	£2,500	
2. New plant and equipment including diesel shovel, diesel engine, storage silo and non-clog crusher	25,000	
		£27,500
		£240,500
Preliminary expenses, including underwriting commission and brokerage of this and the previous issue (£6,562)		10,000
Working Capital, portion of which has already been expended on general overhead expenses during the last 18 months		24,500
		£275,000

ESTIMATED COSTS OF PRODUCTION AND PROFITS.

The following estimates are based on the anticipated minimum production of 35,000 tons of cement per annum.

COSTS—Detailed costs per ton of cement produced are estimated as follows—	
Raw materials, fuel and power	£2 18 1
Labour, maintenance and repairs	1 4 4
Administration, depreciation, interest and royalty	1 7 6
Paper Bags	1 3 0
	£6 12 11
Contingencies	2 1
	£6 15 0
The above figures take into account the use of local brown coal delivered to the site by present available means of transport. By using refuse fuel dusts for fuel, further savings can be effected.	
Total costs on production of 35,000 tons per annum	£236,250
SALES—Based on local selling price of other brands of Victorian cement, it is expected that the sale of 35,000 tons, ex factory, will yield	£350,000
Less cost of production	236,250
NET PROFIT—subject to Income Tax	£113,750
Less—Income Tax at the rate applicable to public companies of 9/- in the pound	51,190
	£62,560

Melbourne,
22nd January, 1953.

I hereby certify that I have examined the above figures and the data from which they have been prepared; and I hold the opinion that they are fair and reasonable, and that the anticipated profits are capable of achievement.

S. GOTTLIEB, D.Sc., A.M.I.E. (Aust.).

It will be seen that the net available profit, after allowing for all expenses, depreciation, royalty and taxation, is equal to over 35% on a share capital of £175,000. This will be sufficient not only for adequate dividends to shareholders and accretions to reserves, but also to meet unforeseen expenses and/or price reductions, if either should arise. Attention is drawn to the Summary of Advantages previously mentioned in this Prospectus, where it is pointed out that any further increases in the costs of fuel and transport will have much less effect on the costs of production of this company compared with plants using expensive high-grade bituminous coals.

STOCK EXCHANGE LISTING.

Early application will be made for official listing of the shares on the Sydney and Melbourne Stock Exchanges.

For Information Only

O. T. Lempriere & Co. Limited

Head Office and Works: 31-41 Bowden St., Alexandria, N.S.W.

Registered Office: 360 Collins St., Melbourne, Victoria.

Recent Issue of £100,000 in 6% Convertible Deposit Notes of £1 each at par.

GENERAL CONDITIONS OF THE ISSUE:

The Convertible Deposit Notes are to be issued on the following terms:—

1. **Denomination of Notes:** £1 each.
2. **Issue Price:** Par.
3. **Interest:** 6% per annum payable half-yearly on 30th April and 31st October of each year. The first interest payment will be made on 31st October, 1953, and will cover interest to that date from the date of allotment.
4. **Maturity Date:** 30th April, 1959.
5. **Conversion Rights:** Registered holders of Deposit Notes will have the right after the 15th day of September, 1958, but not later than the 15th day of October, 1958, to convert their Deposit Notes or any of them into fully paid Ordinary Shares of £1 each on the payment of a premium of 7/6 per share on the basis of the allotment of one ordinary share for each Deposit Note of £1 so converted. Such ordinary shares will rank for dividend as from 1st November, 1958, and interest on the Notes so converted will cease on 31st October, 1958.
6. The whole of the issue with the exception of £20,000 which has been taken firm by the Underwriters is offered to Ordinary Shareholders of the Company registered at 5 p.m. on 15th May, 1953. Shareholders may apply for any number of Notes but applications will be dealt with by the Directors on the following basis (disregarding fractions)—
   (a) Applicants for Notes to the value of half or less of the face value of their ordinary shareholding will receive the full amount of their application.
   (b) Applicants for Notes to the value of more than half of the face value of their ordinary shareholding will receive at least one half of the face value of their ordinary shareholding.
   (c) In the event of the Ordinary Shareholders applying for Notes which, in terms of (a) and (b) above would require a total allotment of more than £80,000, the Underwriters agree to provide the difference required from the £20,000 taken firm by them.

   Subject to the foregoing, allotments will be made at the discretion of the Directors.
7. The full amount of the Deposit Notes applied for is payable on application.
8. Application Lists will open on 18th May, 1953, and will close at 5 p.m. on 29th May, 1953.
9. The Convertible Deposit Notes are not secured by any specific charge over the assets of the Company.
   The Company's obligations, and the rights of the holders of the Notes, are defined by a Deed Poll which the Company has executed and filed with the Registrar-General. A copy of the Deed Poll may be inspected during usual business hours at the Registered Office of the Company.

ASSET BACKING:

The Convertible Deposit Notes rank after all secured debts of the Company and equally with other creditors.

They rank ahead of all share capital, both Preference and Ordinary.

Based on the Company's audited Balance Sheet at 30th June, 1952, the following figures show the net tangible asset backing for the issue:—

Current Assets		£786,429
Fixed Assets		129,805
		£916,234
Deduct—		
A.N.Z. Bank Ltd., Secured	£319,503	
Income Tax	33,676	
Dividends (since paid)	15,900	
Unsecured Creditors	195,829	
		564,908
Net Tangible Assets		351,326
Add Proceeds of Convertible Deposit Note Issue		100,000
Total Net Tangible Assets		£451,326

The total net assets of £451,326 is equivalent to £451 for every £100 of Convertible Deposit Notes. The tangible assets as shown in the above Statement together with the proceeds of the Note Issue, after providing for taxation and 1952 dividend (since paid) and Secured Creditors, is £647,155. On this basis the net tangible asset backing for all unsecured creditors, including the C ible Deposit Notes, is £219 for every £100.

COVER FOR INTEREST:

Interest on the Notes ranks ahead of dividends on bo ference and Ordinary Capital. Net profit, prior to provis taxation, as disclosed in the Company's audited accounts past two financial years is as follows:—

Year ended 30th June, 1951 ..
Year ended 30th June, 1952 ..

On these figures, the annual interest of £6,000 is covered 20. by net profit in the year ended 30th June, 1951, and 16.6 ti net profit in the year ended 30th June, 1952.

APPLICATIONS:

Ordinary Shareholders are entitled to apply for any of the Convertible Deposit Notes in this issue.

In view of the terms of the offer it will not be pos transfer, or trade in, "rights." The Notes, however, may b ferred in the usual manner after allotment.

Applications must be made on the printed Applicatio and payment of the full amount must accompany the Appl Applications close at 5 p.m. on Friday, 29th May, 1953.

ALLOTMENT:

The Directors will proceed to allotment as soon as after 29th May, 1953. A certificate for the Notes allotted Shareholder will then be issued.

Registered holders of the Notes will be entitled to de them in any of the following ways:—

1. They may between 15th September and 15th Octobe by payment in cash of 7/6 per Note, claim allotment fully paid Ordinary Share of £1 in the Capital of th pany in exchange for each Note of £1. In that event on the Notes so converted will cease on 31st Octobe and the Ordinary Shares issued in exchange will r dividend from 1st November, 1958.

   OR

2. They may retain the Notes until maturity on 30t 1959, when the face value of the Notes will be re the Company. Until then holders will receive int 6% per annum.

   OR

3. They may at any time dispose of their Notes or them and Transfers will be effected by a transf similar to that used for shares and stock units. No transfer will be registered during the fourte immediately preceding the days fixed for payme terest on the Notes.

STOCK EXCHANGE LISTING:

Application will be made as soon as practicable for lis Notes on The Stock Exchanges of Melbourne and Sydney.

STATEMENT OF TRADING RESULTS:

*Include total share premiums of £299,340.

In October, 1952, the Gas and Electricity Act was amended to permit automatic adjustment in gas prices in accordance with costs. As a result, it is hoped that profits in future will not suffer from delays in price fixing.

In order to finance new gas holders and other extension projects, the company raised a further £1 million by debentures in March, 1953, raising the debenture/share ratio to 60:40. Further capital is needed, but the mode of raising has not yet been decided.

The company is investigating future use of the Lurgi Process for the complete gasification of coal of a lower grade than that now used.

Baltic Simplex Machinery Co. Ltd.

The following address was given by the Chairman, Mr. G. F. rsen, to shareholders at the Annual Meeting held on April 29:—

t is now 48 years since our company was established in con-tion of the dairy machinery business previously carried on by edersen & Son, who were two of the founders of our company, h actually brings Baltic Simplex to 50 years of service to the ing industry.

)ur subsidiary company, T. Robinson & Co. Pty. Ltd., who are solely concerned in the manufacture of our requirements, was olished in 1853 (100 years ago) which now marks the centenary perations. During this period they became famous throughout Commonwealth of Australia for the manufacture of agricultural inery.

)ur policy has always been to supply high-grade products ed by reliable after-sales service. This has resulted in Baltic lex being recognised as in the forefront of catering for require-s of the farming community.

feel the result of our achievement is something of which we be justly proud, and with a continuance of proper management, orted by modern manufacturing methods, there is no reason we should not continue to expand.

t is freely admitted by the highest authorities, that Australia's perity now, and in the future, depends to a greater extent than upon our primary industries, and as the whole of our activities connected with machinery and equipment for food production, l confident that we will play an important part in the continued lopment of Australia.

Overseas Conditions.

)uring my trip abroad last year, I visited Holland, Belgium, ce, Italy and Switzerland, as well as several important rural icts in England. During the limited time at my disposal, I con-rated on an investigation of farm methods and equipment, and surprised to learn that a great deal of equipment used by farmers ose countries today is not up to the standard of modern Baltic lex products.

After making due allowance for the fact that conditions in those tries are vastly different from Australia, my summing up is the primary producer of this country can feel proud of results ned, which should stimulate all to even greater efforts. Further adaptation of developments of scientific methods will materially increase production and in this respect, assistance from the Government is constantly becoming more evident.

The world is constantly asking for more and more food which must be produced profitably to the farmer and within the buying capacity of the consumer.

It was pleasing to experience the interest shown abroad in Australia by all classes of persons, and the desire of many to settle out here. Greater effort should be made in future to encourage the right type of person to settle in Australia, and I believe an improvement can be effected in our immigration conditions.

Activities for the Year.

I now revert to the main issue of our Annual Meeting which is to deal with our activities for the year under review to January 31, 1953.

It will be remembered, the year started with rather depressed conditions which, fortunately, did not last long, and today we are confronted with conditions which can be faced with the utmost optimism, and I feel sure it must be gratifying to all of our shareholders to see that we have been able to maintain a 12½% dividend for the period under review.

Stock.

It will be noted that the stock on hand is less than last year as the result of our action in reducing purchases of raw materials in anticipation of a much easier market.

Property.

This has increased somewhat in value due to the completion of some of our building operations, including staff residences, bulk store and wood mill.

Finance.

Debtor accounts and financial matters are in a very satisfactory state.

During the current year, we intend to pursue a very strong selling campaign to cope with altered conditions, and already there is a very pronounced improvement in turnover.

I now desire, on behalf of the directors and shareholders, to express to all sections of the management, executive officers and staff, our appreciation of their work during the year.

United Provisions Limited

Ham and Bacon Curers, Canners, Etc.

Office: 34 King St., Melb. **'Phone:** MB 2011. **Directors.** G. A. Foggitt (Chairman), A. R. Archibald (Deputy Chairman), A. B. Anderson, A. J. Hutchison, J. A. Hutchison, C. M. Stokes, C. H. Warwick. **Auditors:** Wilson, Danby & Giddy.

th Year ended September 30, 1952. Meeting October 30, 1952.

Profit rose by £33,000 to £108,226 reflecting more favour- trading conditions. There has been some increase in pig ing and the output of bacon and hams has risen, including ort trade.

No interim dividends were paid because of the overdraft tion, but the final ordinary dividend was raised from 5% %. By October, 1952, the overdraft had been reduced from ,000 by approximately £400,000. Sale of fixed assets, in-ing a Sydney warehouse, realised £47,518, bringing con-dated reserves to £383,294.

"A serious problem was the contraction of exports due creased costs, mainly in raw materials and wages," said the man, Mr. A. E. Jamieson, in his address to shareholders Annual Meeting on May 8. His address reads:

The operations for the year disclose a net profit of £ after providing £17,428 for taxation, as compared with a net of £22,795 for the year ended December 31, 1951.

Balance Sheet.

Reference to the Consolidated Balance Sheet shows that debtors at £88,237 have decreased by £8,193 when compared the previous year, whilst stocks have increased at £30,344.

Current assets have increased by	£22,5
Fixed assets have decreased by	5,0
Investments have increased by	2,5
Net increase in assets	£17,0
Current liabilities have increased by	£14,3
Loan on mortgage has decreased by	2,2
Shareholders' funds have increased by	4,9
	£17,0

Stocks held by the Company are in good order and have valued at cost, market price, or replacement value, whiche the lowest.

After excluding goodwill, each £1 preference share has tangible assets backing of £17/8/-, whilst each £1 ordinary after providing for the preference share at par, is secur £2/10/1.

Export Trade.

In reviewing the operations of the Company for 1952, a s problem was that of the contraction of exports (excluding c fruits), a condition common throughout the industry. This traction was due to increased costs, mainly in raw materials wages, which inflated prices to a point preventing Australian facturers from competing for the extensive overseas trade mally offering in those secondary products processed by the pany.

A further serious threat to overseas trade now presents with the proposed increase in shipping freight rates.

Trade Within Australia.

In consequence of the reduced overseas sales, manufact had available surplus production for consumption on the dor market, thus bringing about intense competition, and i accounts now presented to you the effect is apparent in the cost involved in the procurement of this trade.

Added to the repercussions of the loss of overseas trade, was also the effect of the credit restrictions imposed by the monwealth Government, which caused many businesses to stantially reduce the quantity of stocks held by them in or adjust their finances to the altered conditions. This caused a spread curtailment of orders until stocks had been reduced minimum.

This situation reacted against manufacturers, causing te ary unemployment or loss of overtime which employees had accustomed to receiving for some years past.

Many organisations, including our own, were faced w buyer resistance which had to be overcome until such time supply equated itself to the demand. Undoubtedly the poli credit restrictions has tended to reduce the rate of accelerat increase in wages and other costs, and most people will agre a steady correction is in the best interests of the communit

Canned Fruits.

Our 1953 pack is in quantity slightly in excess of th 1952 and the quality has been well maintained. The greate tion of this has already been sold to the British Ministry of and the balance will be available for general export and s the Australian markets.

Taxation.

It is hoped that the promised reduction in taxation wi relief to the burden which is being carried by industry. instance of companies, this is a very severe burden.

Your own Company, in the year under review, had to p for income tax almost one half of the profit earned. Apart income tax, it is hoped that the relief will also be extende reduction of sales tax and the elimination of payroll tax. duction in taxation, both direct and indirect, would give m ment an opportunity of reducing costs, thereby enabling th resuscitate overseas trade.

A further point is the fact that initial depreciation of 4 the cost of new plant acquired has now been withdrawn. C new machinery is still exceedingly high, and consideration be given by the Commonwealth Government to assist indus reinstating this allowance.

Conclusion.

In view of the economic trends to which I have referre whole of the Company's budgets have been thoroughly re and operations adjusted to a point where production can be tained at a steady level, at the same time retaining all tha bility necessary to enable the factories to handle any spec quirements which may be called for from time to time.

In conclusion, on behalf of the Board of Directors, I like to thank the staff and employees for their continued and co-operation.

The following report by the Chairman, Mr. S. L. Pinkus circulated to shareholders with the annual accounts:—

Whilst the subsidiary companies made very satisfactory from trading, they experienced considerable difficulty durin year, and the fall in commodity prices, particularly wool, buyer resistance in expectation of lower selling prices for c the flood of British imports and the severe credit restrictio contributed to a heavy falling off in turnover which was noticeable in the second half of the year.

The prices of jute and hessian, the principal commoditie in the production of a subsidiary company's products fell even greater extent. At 30th June, 1951, there existed a subs margin between the book value of the company's stocks a market replacement value. The extent of the fall was such in order to reduce the value of stocks to market repla value at 30th June, 1952, a sum of £164,984 had to be writt Some idea of the severity of the fall can be gauged when you that hessian, which twelve months ago cost 4/4½d. pe to land, could be landed today at prices ranging from 1/6d. t per yard—a fall of slightly more than 60%. Part of this fa brought about by the sudden removal by the Indian Gove of an export duty equal to approximately 1/- per yard. It believed that no further writing down of stock is necessary

Since the close of the financial year the subsidiary com sales have shown a slight tendency to an improvement an have operated on a profitable basis. Preliminary reports i that for the three months ended 30th September, 1952, a p approximately £10,684 was made. Subject to a continuity of trading conditions it is anticipated that this rate of earni be maintained.

I've known Tom for years.....

. . . met him in the street to-day and we chatted as we walked. Mentioned that it was in my mind to see him about fixing up my will so that my wife and the kiddies would be well looked after if anything should happen . . . after all, I have a pretty good business and it *could* keep them in the circumstances they have been used to but, the kids are young and you know what women are like when it comes to running an engineering business . . . Tom offered some suggestions and,

I trust his judgment .....

after all, he is a legal man and his advice is sound and logical. I decided to appoint a trustee company as my executor . . . matter of fact it was . . . NATIONAL TRUSTEES.

National Trustees is an organisation of specialists experienced in ALL phases of family and business estate matters . . . an organisation to which you can entrust the future of your family and the estate which is to support them.

Free literature explaining the full and comprehensive services of National Trustees is readily available to 'phone or mail requests.

*Adjusted figures from prospectus dated November, 1951.

The company owns all the shares in F. W. Hughes Pty. Ltd., which operates subsidiaries engaged in various aspects of the wool industry.

Seven pastoral companies operate in New South Wales, and processing, manufacturing and distributing activities are carried out in Sydney and Melbourne by the following—

The Colonial Wholesale Meat Co. Pty. Ltd.

Colonial Meat Co. Pty. Ltd.

Alexandria Spinning Mills Pty. Ltd.

Alexandria Textiles Pty. Ltd.

Sales of the textile section were maintained until January, but later declined. Profits of the meat and pastoral sections were satisfactory.

Net tangible asset backing (book value)—16/2.

PARTNERSHIP ASSURANCE

IF YOU could take into your business an associate who would not ask for a voice in the management—who would guarantee to protect you financially against the death of any member of the firm—who would stand ready to lend you money in time of need—who would hold a growing fund to your credit as a reserve—would you embrace the offer?

A.M.P. PARTNERSHIP ASSURANCE will do this and more.

Ask the nearest A.M.P. office or representative to work out a plan to suit your particular needs.

The Chairman, Mr. H. H. Webb, addressed the Annual Meeton November 21 as follows:

The consolidated profit for the year after allowing for taxan is shown as £26,212, which is an improvement of over £8,000 the previous year. All sections of the business have operated a profitable basis, and the recently announced budget suggests t the provision made for taxation is adequate.

The consolidated reserve position before appropriating the balce of this year's profits now stands at £66,553.

Capital.

During the year two issues of ordinary shares were underen and resulted in the introduction of £105,000 of extra capital into the business. Your Directors are confident that this capital can be profitably employed in the future operations of the company.

Activities.

The company is now fully installed in its new premises at Mascot in New South Wales and Moorooka in Queensland, and these moves have resulted in greater efficiency in those spheres.

Our Webcraft unit has recently taken over the Leigh Plating Works in Brisbane, which should prove a valuable adjunct to our activities in that location.

Another progressive step being taken by our Webcraft unit is that within a couple of months it will be operating a Hard Chrome Plating Unit in Melbourne, where it is anticipated that there will be a good demand for this service.

Stocks.

An examination of our Balance Sheet will have revealed to you that our stocks at nearly £275,000 are almost £100,000 higher than a year ago. There are several reasons for this increase in value, and they are that we were unable to accumulate any stocks twelve months ago, but now we have supplies available in all our distributing centres and further, we have reasonable supplies behind all our manufacturing units.

It is felt by your Directors that the increase in stocks is to the advantage of the business as all have been conservatively valued and are readily saleable.

Expansion.

Mention was made in our report of a proposal to launch our activities in Western Australia. The Board has investigated several propositions and feels that the reservation made in the Fremantle Industrial Area offers the best prospects for our eventual expansion to the Western State of Australia.

During the year we opened a manufacturing and distributing unit in Newcastle, and this service has been well received in that important section of Australia.

Conclusion.

In conclusion, your Board expresses its confidence in the future of Australian industry, and in the future prospects of this company.

UNION TRUSTEE

Protects and Conserves

Your Assets

For the security of your dependants, the management and protection of your assets is just as important *after* your lifetime as it is now. Administration of Estates is a specialised duty that Union Trustee has faithfully performed for over 67 years. It is significant that an increasing number of people in all walks of life are appointing the Company as Executor or Trustee.

Charges are exceedingly moderate; are, in fact, limited by law. Continuity of service is assured at all times.

Call for a personal interview, or write for a copy of the free booklet — "Important Facts concerning Wills, Executors, Trustees." No charge—no obligation.

The whole of the ordinary capital is owned by Humes Ltd. Although large profits were earned in the post-war years, no ordinary dividend was paid previously because of the substantial overdraft. In 1952 this was converted to a credit of £8,405, and ordinary dividends were resumed.

Works are at Singapore, and activities include structural steel engineering, electrical contracting and manufacture of asbestos/cement products, concrete pipes, steel pipes and steel tanks.

Net tangible asset backing (book values)—Pref., £5/9/10. Ord. shares are not listed.

Hume Industries (Far East) Limited

tecord profits were reported by the Chairman, Mr. M. R. Swain, ie Directors' Annual Report, which was circulated with the unts. The report reads:—

Your board submits for consideration, report and balance sheet ring the operations of the company for the year ended Decem- 31, 1952, and has pleasure in reporting another satisfactory year ading.

The net profit for the year, before providing for income tax unted to $2,063,281 (£A300,065) compared with $1,874,042 73,541) for the previous year.

Dividends from the company's associate, Rheem-Hume (Far) Ltd., declared and included in these accounts, amounted to 600 (£A94,472) compared with $400,750 (£A58,495) for the previous

Prospects.

Hume Industries (Far East) Ltd.—Contracts and orders placed all departments remain at a satisfactory level and your Board the opinion that, subject to the continuance of existing economic itions, the company should be able to maintain the same level ading as in 1952.

Additional equipment has been ordered to manufacture asbestos ent pressure pipes and it is hoped that this new department will production towards the end of 1953.

eem-Hume (Far East) Ltd.—During the latter part of 1952 the and for containers decreased largely due to a desire by pur- ers to effect an all-round reduction of inventories, but with resumption of normal purchases in the near future, and some eases in the range of the company's products, as referred to in previous report, it is expected that results for 1953 will prove factory.

Balance Sheet.

As a result of a further reduction in the company's overdraft and improvement in the liquid position, your board was able to pay an interim dividend on ordinary and participating preference shares for the six months ended June 30, 1952, at the rate of 5%.

Because of the continued improvement in the financial position and present trading results, your Board now recommends the payment of a final dividend for the six months ending December 31, 1952, on both ordinary and participating preference shares of 7½%, making a total of 12½% for the year.

Reserve.

The sum of $687,610 (£A100,000) was appropriated from the year's profits, bringing the reserve to $2,057,817 (£A300,000).

Malayan War Risk (Goods) Insurance Claims.

Since the Directors' last report, the promised dividend of 30%, amounting to $339,311 (£A49,527) has been received; this brings the dividends to a total of 70% of the award.

Malayan War Damage Claim.

As previously reported a dividend of 30%, amounting to $430,168 (£A62,789) was received in 1951. A further dividend of 20%, amounting to $286,776 (£A41,706) has been declared and was received on January 27, 1953, after the closing of these accounts.

Pre-War Debtors.

Accounts due by pre-war debtors have realised a further $55,274 (£A8,039) during 1952, which amount has been added to the War Damage Claims Reserve.

Except as mentioned herein the year's trading has not been affected by any abnormal circumstances.

Formed in 1946 to manufacture 40 h.p. Bulldog Tractors, the company has its machine shop and assembly plant at Springvale, near Kelly & Lewis Ltd. (which is a large shareholder and provides technical assistance).

In common with other tractor manufacturers in Australia, the company was adversely affected by reduced wheat acreage, and the end of the post-war shortage of agricultural tractors causing production to be suspended in August, 1952. The factory is partly occupied on manufacture of spares and general engineering work, but the Hobart foundry has been closed.

Net tangible asset backing (book values)—11/7 for each £1 ordinary share. Preference shares are not listed.

Kornblums Furnishings Ltd.

In the Directors' Report circulated to shareholders with the ual Accounts, the Chairman, Mr. G. S. Kaye, reported as follows:

In a review of the overall results of the activities of the sub- aries for the year ended January 27, 1953, it is perhaps needless oint out that the period has been one of many difficulties, some hich have not arisen over the past two decades. Although the profit was less than that of the provious year, your Directors are ne opinion that the result should not be considered unsatisfactory ng regard to the general conditions which prevailed.

By reference to the consolidated balance sheet it will be seen there are many marked changes in relation to the previous year. tors have increased, reflecting the recent more active trading ditions, while stocks on hand are much lower. Large reductions e taken place in liabilities generally.

Kornblums Pty. Ltd.

On the distribution side, during the greater part of the year, wholesale furnishing softgoods trade was encumbered with essive stocks, which, by reason of financial restrictions, and some ed realisations by weaker holders, had the usual unsettling effect the market. During the latter months of the year the situation erally improved. Stocks held by Kornblums Pty. Ltd. at the e of the trading period were normal, and in the case of some lines tage of supply was becoming apparent.

By reason of import restrictions the volume of overseas supplies articularly low, and a recent minor easement of these restrictions been most welcome.

As reported last year, a property situated at 229 Castlereagh et, Sydney, was purchased by Kornblums Pty. Ltd. for warehouse ises. Following action taken by your Directors, it can be cipated that sufficient space for present requirements will be pied during the latter months of the current year.

Kornblums Agencies Pty. Ltd.

This new company was formed during the year to conduct agency ness, and it is hoped will become a useful adjunct to the group.

Furnishing Textiles Pty. Ltd.

During the year the manufacturing subsidiary, Furnishing Textiles Pty. Ltd., experienced increasing demand for its products.

Although the renewal of operations on a normal two-shift basis did not take place as early as anticipated in the previous annual report, production was gradually increased and by the end of the trading period had reached a record level. However, the satisfactory operations in the last few months of the year were not sufficient to eliminate losses incurred in the earlier part and a small net loss for the period resulted.

Since the end of the financial year, the operations of this company have continued to be satisfactory.

In the opinion of your Directors, profits of the period under review have not been materially affected by items of an abnormal nature except as set out above.

Proposed Acquisition of Kornblums (S.A.) Ltd.

At the Annual Meeting, the Chairman made the following announcement:—

By reason of an arrangement entered into many years ago, the trading of one of your subsidiaries, Kornblums Pty. Ltd., has been confined to the Eastern States. A company, Kornblums (S.A.) Ltd., with headquarters and warehouse premises centrally situated in Adelaide, operates only in the Western States. This organisation is long established and conducts a wholesale furnishing business with an active and profitable distribution within its field.

Although similar in name, Kornblums (S.A.) Ltd., has always been owned and operated by interests entirely separate and distinct from your company and its subsidiaries. Negotiations are now taking place for the acquisition by your company, Kornblums Furnishings Ltd., of all the shares of Kornblums (S.A.) Ltd.

Application is being made to Capital Issues Control for authority to issue additional capital, and if this be granted, shareholders will be informed in full detail of future plans.

Mallee Hotels Limited

. Office: 140 Queen St., Melb. **'Phone:** MU 7718. **Directors:** R. T. Trembath (Chairman), J. S. Houghton, A. J. Shackelford, Mrs. I. M. Houghton. **Auditor:** M. Shackell.

)th Year ended December 31, 1952. Meeting February 17, 1953.

Gross earnings were steady, but profit fell from £4,182 to 9, due mainly to special repairs and renovations. This in- ased the charge for replacements, repairs and renovations depreciation by £5,296 to £7,660. Normal dividend of 10% paid mainly from accumulated profits of previous years.

The company owns the Victoria Hotel at Ouyen.
